Celebrating 125 Years
of Engineering the Future

CONTENTS

| | |
|---|-------------|
| Preface | xi |
| Acknowledgments | xiii |
| | |
| 1 Introduction | 1 |
| | |
| 2 System Availability | 5 |
| 2.1 Availability, Service and Elements | 6 |
| 2.2 Classical View | 8 |
| 2.3 Customers' View | 9 |
| 2.4 Standards View | 10 |
| | |
| 3 Conceptual Model of Reliability and Availability | 15 |
| 3.1 Concept of Highly Available Systems | 15 |
| 3.2 Conceptual Model of System Availability | 17 |
| 3.3 Failures | 19 |
| 3.4 Outage Resolution | 23 |
| 3.5 Downtime Budgets | 26 |
| | |
| 4 Why Availability Varies Between Customers | 31 |
| 4.1 Causes of Variation in Outage Event Reporting | 31 |
| 4.2 Causes of Variation in Outage Duration | 33 |
| | |
| 5 Modeling Availability | 37 |
| 5.1 Overview of Modeling Techniques | 38 |
| 5.2 Modeling Definitions | 58 |
| 5.3 Practical Modeling | 69 |
| 5.4 Widget Example | 78 |
| 5.5 Alignment with Industry Standards | 89 |
| | |
| 6 Estimating Parameters and Availability from Field Data | 95 |
| 6.1 Self-Maintaining Customers | 96 |
| 6.2 Analyzing Field Outage Data | 96 |
| 6.3 Analyzing Performance and Alarm Data | 106 |

| | | |
|-------------------|---|------------|
| 6.4 | Coverage Factor and Failure Rate | 107 |
| 6.5 | Uncovered Failure Recovery Time | 108 |
| 6.6 | Covered Failure Detection and Recovery Time | 109 |
| 7 | Estimating Input Parameters from Lab Data | 111 |
| 7.1 | Hardware Failure Rate | 111 |
| 7.2 | Software Failure Rate | 114 |
| 7.3 | Coverage Factors | 129 |
| 7.4 | Timing Parameters | 130 |
| 7.5 | System-Level Parameters | 132 |
| 8 | Estimating Input Parameters in the Architecture/Design Stage | 137 |
| 8.1 | Hardware Parameters | 138 |
| 8.2 | System-Level Parameters | 146 |
| 8.3 | Sensitivity Analysis | 149 |
| 9 | Prediction Accuracy | 167 |
| 9.1 | How Much Field Data Is Enough? | 168 |
| 9.2 | How Does One Measure Sampling and Prediction Errors? | 172 |
| 9.3 | What Causes Prediction Errors? | 173 |
| 10 | Connecting the Dots | 177 |
| 10.1 | Set Availability Requirements | 179 |
| 10.2 | Incorporate Architectural and Design Techniques | 179 |
| 10.3 | Modeling to Verify Feasibility | 206 |
| 10.4 | Testing | 208 |
| 10.5 | Update Availability Prediction | 208 |
| 10.6 | Periodic Field Validation and Model Update | 208 |
| 10.7 | Building an Availability Roadmap | 209 |
| 10.8 | Reliability Report | 210 |
| 11 | Summary | 213 |
| Appendix A | System Reliability Report outline | 216 |
| 1 | Executive Summary | 215 |
| 2 | Reliability Requirements | 217 |
| 3 | Unplanned Downtime Model and Results | 217 |
| | Annex A Reliability Definitions | 219 |
| | Annex B References | 219 |
| | Annex C Markov Model State-Transition Diagrams | 220 |
| Appendix B | Reliability and Availability Theory | 221 |
| 1 | Reliability and Availability Definitions | 221 |
| 2 | Probability Distributions in Reliability Evaluation | 228 |
| 3 | Estimation of Confidence Intervals | 237 |

| | | |
|--------------------------|---|------------|
| Appendix C | Software Reliability Growth Models | 245 |
| 1 | Software Characteristic Models | 245 |
| 2 | Nonhomogeneous Poisson Process Models | 246 |
| | | |
| Appendix D | Acronyms and Abbreviations | 263 |
| | | |
| Appendix E | Bibliography | 265 |
| | | |
| Index | | 279 |
| | | |
| About the Authors | | 285 |
