

✚ Neonatal
Intensive Care
Nursing
2nd edition

Edited by Glenys Boxwell

Contents

List of figures	xv	Practice-based evidence/ nursing-based evidence	11
List of tables	xvii	Conclusion	12
Notes on contributors	xix	References	13
Preface	xxiii		
Acknowledgements	xxv	2 Developmentally Focused Nursing Care	16
List of abbreviations	xxvii	TILLY REID AND YVONNE FREER	
Glossary	xxviii	Introduction	17
1 Exploring Evidence-based Practice (EBP) in Neonatal Care	1	Theoretical approaches to developmentally focused care	17
FIONA HUTCHINSON		<i>Sensory overload/deprivation</i>	18
Introduction	2	<i>Parent–infant attachment</i>	19
What is evidence-based practice (EBP)?	2	<i>Behaviour</i>	20
Propositional knowledge (scientific knowledge)	3	<i>Sleep–wake state scoring systems</i>	22
Knowledge gained through practice experience	6	Behavioural assessment	24
<i>Personal experience</i>	6	The NICU environment	24
Knowledge from patients, clients and carers	7	<i>Sound hazard</i>	26
Knowledge from a local context (audit and evaluation)	8	<i>Light hazard</i>	27
The use of evidence in clinical decision-making	9	<i>Handling</i>	28
		<i>Contingent care</i>	29
		Postural support	30
		<i>Equipment</i>	32
		<i>Prone position</i>	33
		<i>Supine position</i>	33

<i>Side-lying position</i>	34	<i>Breathing</i>	70
Developmental models of care	34	<i>Circulation</i>	72
Conclusion	36	<i>Drugs</i>	73
References	37	<i>Meconium stained liquor</i>	78
		Evaluation of resuscitation	79
		<i>How long should resuscitation continue?</i>	80
3 Families in NICU	40	Conclusion	80
SUE TURRILL AND		Case study	80
LIZ CRATHERN		References	81
Introduction	41		
Historical context of family involvement	41	5 Management of Thermal Stability	87
The environment	43	PAULINE FELLOWS	
Becoming a parent	44	Introduction	88
<i>Being a mother in NICU</i>	44	Embryology	88
<i>Being a father in NICU: role transition and role identity – the forgotten parent</i>	46	Mechanisms of heat gain	89
<i>Fathers' changing roles</i>	46	<i>Non-shivering thermogenesis</i>	89
Signs of parental stress and coping	48	<i>Brown adipose tissue (BAT)</i>	89
Family nursing and support: caring for the whole family	49	<i>Gluconeogenesis</i>	91
Family systems and assessment	51	<i>Insulin</i>	91
Strategies for support: anticipating and reducing stress	52	<i>Noradrenaline</i>	91
<i>General principles</i>	52	<i>The thyroid</i>	91
<i>More specific strategies</i>	53	<i>Thermal receptors</i>	92
<i>Communication</i>	54	<i>Vasoconstriction</i>	92
Conclusion	57	<i>Thermoneutrality</i>	92
Case studies	58	Mechanisms of heat loss	93
Web-based resources for parents	60	<i>Radiation</i>	93
Acknowledgements	60	<i>Evaporation</i>	93
References	61	<i>Convection</i>	94
		<i>Conduction</i>	94
		<i>Heat exchanged through the respiratory tract</i>	94
4 Resuscitation of the Newborn	65	Surface area	94
GLENYS CONNOLLY		<i>Immature skin</i>	95
Introduction	66	<i>Transepidermal water loss (TEWL)</i>	95
Asphyxia	66	<i>Hypothermia</i>	96
Anticipation	68	<i>Cold stress</i>	97
The ABC (D and E) of resuscitation	69	<i>Neonatal cold injury</i>	98
Airway	70	<i>Re-warming in severe hypothermia</i>	98
		<i>Hyperthermia</i>	99
		Management of thermal stability at delivery	99

<i>The healthy infant</i>	100	Pneumonia	128
<i>Delivery by Caesarean section</i>	100	<i>Congenital pneumonia</i>	128
<i>The infant with birth suppression</i>	100	<i>Early onset pneumonia</i>	128
<i>Meconium stained liquor</i>	101	<i>Late onset pneumonia</i>	128
<i>Infants with congenital anomalies</i>	101	<i>Meconium aspiration syndrome (MAS)</i>	129
<i>The vulnerable infant, e.g. preterm or VLBW</i>	101	<i>Persistent pulmonary hypertension of the newborn</i>	131
<i>Management of thermal stability in NICU</i>	103	<i>Inhaled nitric oxide (iNO)</i>	133
<i>Radiant warmers</i>	103	<i>ECMO</i>	133
<i>Incubators</i>	103	<i>Trends in neonatal respiratory care</i>	134
<i>Radiant warmers vs. incubators</i>	104	<i>Acid–base balance, gas transport and monitoring</i>	135
<i>Handling and temperature</i>	105	<i>Non-invasive respiratory support</i>	138
<i>Humidity</i>	105	<i>Continuous positive airways pressure (CPAP)</i>	138
<i>TEWL and phototherapy</i>	106	<i>CPAP delivery</i>	138
<i>Skin</i>	107	<i>Modes of invasive ventilation</i>	139
<i>Heated water-filled mattresses</i>	107	<i>Continuous mandatory ventilation (CMV)</i>	140
<i>Thermal status during transport</i>	108	<i>Volume control (VC)</i>	142
<i>Temperature measurement</i>	108	<i>Assist control ventilation (A/C)</i>	142
<i>Continuous monitoring</i>	108	<i>Synchronised intermittent mandatory ventilation (SIMV)</i>	142
<i>Intermittent temperature recordings</i>	109	<i>Pressure support ventilation (PSV)</i>	143
<i>Hypothermia as a treatment for neonatal encephalopathy</i>	109	<i>High frequency oscillation ventilation (HFOV)</i>	143
<i>Conclusion</i>	110	<i>Weaning from invasive ventilation</i>	144
<i>Case studies</i>	110	<i>Nursing care of the ventilated infant</i>	144
<i>References</i>	111	<i>Conclusion</i>	146
6 Management of Respiratory Disorders	121	<i>Case study</i>	146
SIMONE JOLLYE AND DAVID SUMMERS		<i>References</i>	147
<i>Introduction</i>	122	7 Management of Cardiovascular Disorders	153
<i>The development of the respiratory system</i>	122	ROSARIE LOMBARD	
<i>Fetal lung fluid and fetal breathing movements</i>	123	<i>Introduction</i>	154
<i>Surfactant</i>	123	<i>Embryology of the cardiovascular system</i>	154
<i>Respiratory changes at birth</i>	123		
<i>Respiratory distress syndrome (RDS)</i>	124		
<i>Pulmonary interstitial emphysema (PIE)</i>	126		
<i>Pneumothorax</i>	126		
<i>Pulmonary haemorrhage (PH)</i>	127		

<i>Development of the primitive heart</i>	154	8 Neonatal Brain Injury	185
<i>Septation of the heart</i>	155	ANJA HALE	
<i>Blood vessels</i>	156	Introduction	186
<i>Cardiac conduction</i>	157	Vulnerability of the neonatal brain	186
<i>Fetal circulation</i>	158	Germinal matrix and intraventricular haemorrhage	187
<i>Transitional neonatal circulation</i>	158	Aetiology	187
<i>Normal physiology</i>	160	Post-haemorrhagic hydrocephalus (PHH)	190
<i>Cardiac cycle</i>	160	Periventricular haemorrhagic infarction (PVHI)	190
<i>Cardiac output</i>	160	Pereventricular leukomalacia (PVL)	190
<i>Regulation of neonatal circulation</i>	161	Hypoxic-ischaemic brain injury in the term infant	191
<i>Neural regulation</i>	161	Hypothermia for neuroprotection	194
<i>Hormonal regulation</i>	162	Neonatal seizures	195
<i>History and clinical examination</i>	162	Causes of seizures by time of onset	196
<i>History</i>	163	Continuous brain function monitoring	198
<i>Physical examination</i>	163	Other mechanisms of brain injury	199
<i>Investigations</i>	165	Chorioamnionitis and brain injury	199
<i>Pathophysiology of common and relevant neonatal conditions</i>	166	Hypoglycaemic injury to the brain	199
<i>PDA</i>	166	Conclusion	199
<i>Hypotension</i>	168	Case studies	200
<i>Persistent pulmonary hypertension of the newborn (PPHN)</i>	170	References	202
<i>Arrhythmias</i>	172	9 Management of Haematological Disorders	204
<i>Congestive heart failure (CHF)</i>	172	JACKIE DENT AND KATIE MCKENNA	
<i>Congenital heart defects (CHD)</i>	173	Introduction	205
<i>Nursing considerations</i>	177	Jaundice	205
<i>Maximise oxygenation</i>	177	Bilirubin encephalopathy and kernicterus	205
<i>Reduce oxygen requirements</i>	177	Physiology of bilirubin production	206
<i>Maximise comfort</i>	177		
<i>Maximise nutritional status</i>	178		
<i>Minimise infection risk</i>	178		
<i>Safe administration of drugs</i>	178		
<i>Provide family support</i>	179		
<i>Innovative strategies and ongoing research</i>	179		
<i>Case study</i>	180		
<i>References</i>	180		
<i>Further reading</i>	184		

<i>Bilirubin metabolism and excretion</i>	206	10 Pain and Its Management in NICU	230
<i>Physiological jaundice</i>	206	KAYE SPENCE	
Other causes of jaundice	207	Introduction	231
<i>Rhesus incompatibility</i>	208	Development of the pain pathways	231
<i>ABO incompatibility</i>	209	Outcomes of pain	232
<i>G6PD deficiency</i>	209	<i>Early pain experiences</i>	233
<i>Jaundice associated with breastfeeding</i>	210	<i>NICU environmental influences</i>	233
Measurement of jaundice	210	<i>Surgery</i>	233
Management of jaundice	211	<i>Chronic pain</i>	233
<i>Phenobarbital</i>	213	Expression of pain	234
<i>Intravenous immunoglobulin (IVIG)</i>	213	<i>Physiological response to pain</i>	234
<i>Metalloporphyrin</i>	213	<i>Behavioural responses to pain</i>	234
<i>Phototherapy</i>	214	<i>Endocrine/metabolic manifestations of pain</i>	235
<i>Methods of administration of phototherapy</i>	215	Assessment of pain	235
<i>Exchange transfusion</i>	216	Behavioural states	236
Vitamin K deficient bleeding (VKDB)	217	Guidelines for a pain assessment	238
<i>Coagulation</i>	217	<i>Ensuring the reliability of staff in using a pain assessment score</i>	239
<i>Sources of vitamin K</i>	217	Management of pain	239
<i>Characteristics of vitamin K deficient bleeding</i>	218	<i>Comfort</i>	239
<i>Vitamin K prophylaxis</i>	219	<i>Non-pharmalogical interventions</i>	240
Disseminated intravascular coagulation (DIC)	220	<i>Pharmacological interventions</i>	242
<i>Management of DIC</i>	220	<i>Post-operative pain management</i>	245
Anaemia	221	Professional issues	246
<i>Physiological anaemia</i>	221	<i>Clinical guidelines and practice</i>	246
<i>Anaemia of prematurity</i>	221	<i>Caregiver knowledge and response to newborn pain</i>	246
<i>Causes of pathological anaemia</i>	221	<i>Ethical aspects of neonatal pain</i>	246
<i>Red blood cell haemolysis</i>	222	Families	247
<i>Signs and symptoms of anaemia</i>	223	Conclusion	248
<i>Management of anaemia</i>	223	Case study	248
Conclusion	224	References	249
Case studies	224	11 Fluid and Electrolyte Balance	255
Acknowledgements	225	DEE BERESFORD AND GLENYS CONNOLLY	
References	225	Introduction	256

Embryological development	256	<i>Enteral nutrition</i>	289
Physiology of urine production	256	<i>Methods</i>	290
Sodium balance	257	<i>Specific problems in NICU</i>	292
<i>Hyponatraemia</i>	258	Family support	293
<i>Hypernatraemia</i>	259	Conclusion	295
Potassium balance	259	Case studies	295
<i>Hypokalaemia</i>	259	References	296
<i>Hyperkalaemia</i>	260		
Chloride balance	261	13 Neonatal Infection	302
<i>Calcium and phosphate balance</i>	261	GLENYS CONNOLLY	
Water management	262	Introduction	303
<i>Fluid requirements</i>	262	Acquisition of antenatal infection	303
<i>Monitoring fluid balance</i>	263	Acquisition of intrapartum (vertical) infection	305
<i>Accurate measurement of body weight</i>	263	Late onset and nosocomial infection	306
<i>Measurement of urine volume</i>	263	The susceptible host	308
<i>Urinalysis</i>	264	Signs of neonatal sepsis	311
<i>Glucose homeostasis</i>	265	<i>Respiratory signs</i>	312
<i>Renal handling of glucose</i>	267	<i>Thermal signs</i>	312
<i>Hypoglycaemia</i>	267	<i>Cardiovascular signs</i>	312
<i>Management of hypoglycaemia</i>	267	<i>Skin signs</i>	312
<i>Hyperglycaemia</i>	268	<i>Gastrointestinal signs</i>	313
Acute renal failure	269	<i>Neurological signs</i>	313
<i>Investigations</i>	270	Investigations	313
<i>Management of ARF</i>	271	<i>Surface swabs and site cultures</i>	315
Dialysis	272	<i>Haematological tests</i>	315
<i>Peritoneal dialysis (PD)</i>	272	<i>Cerebrospinal fluid</i>	316
<i>Continuous arteriovenous haemofiltration (CAVH)</i>	273	<i>Urine</i>	317
Conclusion	275	Management of the infected newborn	317
Case studies	275	<i>General supportive therapy</i>	317
Acknowledgements	276	<i>Acid base balance</i>	318
References	276	<i>Fluid and electrolyte balance</i>	319
		<i>Haematological management</i>	319
12 Nutritional Management of the Infant in NICU	279	<i>Antimicrobial therapy</i>	319
KAYE SPENCE		<i>Penicillins</i>	320
Introduction	280	<i>Aminoglycosides</i>	321
The gastrointestinal system	280	<i>Aztreonam</i>	321
Outcomes of nutrition	282	<i>Cephalosporins</i>	321
<i>Growth</i>	283	<i>Vancomycin and teicoplanin</i>	321
<i>Assessment</i>	285	<i>Metronidazole</i>	322
<i>Feeding the NICU infant</i>	287	<i>Chloramphenicol</i>	322
<i>Requirements</i>	287	<i>Adjunctive therapies</i>	322
<i>Parenteral nutrition</i>	287	Conclusion	323

Case study	323	Associated congenital/ chromosomal anomalies	366
References	324	Familial anaesthetic problems	366
14 Diagnostic and Therapeutic Procedures 329		Pre-operative investigations and preparation	367
ELIZABETH HARLING AND GLENYS CONNOLLY		Investigations	367
Introduction	330	Preparation	369
General issues surrounding procedures	330	Premedication	369
Pain management	330	Transfer to the operating theatre	370
Skin preparation	330	Intra-operative management	370
Gastric tube placement	331	Induction of anaesthesia	370
Naso/oro-gastric tube	331	Intravenous induction	370
Transpyloric tube	333	Inhalation induction	371
Blood sampling	334	Airway management	371
Capillary blood sampling	334	Maintenance of anaesthesia	372
Venous blood sampling	336	Oxygen and retinopathy of prematurity	372
Arterial blood sampling	337	Emergence from anaesthesia and extubation	372
Peripheral artery cannulation	339	Analgesia	372
Peripheral vein cannulation	340	Opioids	373
Percutaneous venous longline	343	Morphine	373
Umbilical vessel catheterisation	345	Fentanyl	373
Umbilical artery catheterisation	345	Remifentanyl	374
Umbilical vein catheterisation	348	Paracetamol	374
Lumbar puncture	349	Non-steroidal anti- inflammatory drugs	374
Urine sample collection	351	Local anaesthesia	374
Urethral catheterisation	351	Wound infiltration	375
Suprapubic aspiration	352	Peripheral nerve blocks	375
Endotracheal tube placement	353	Central (neuro-axial) blocks	375
Chest drain placement	356	Caudal epidural anaesthesia	376
Case study	359	Lumbar and thoracic epidural anaesthesia	376
Acknowledgements	361	Spinal anaesthesia	377
References	361	Fluid therapy	377
15 Neonatal Anaesthesia 363		Maintenance of fluid	377
BEVERLEY GUARD, LIAM BRENNAN AND RACHEL HOMER		Replacement of fluid lost by evaporation/sequestration	378
Introduction	364	Replacement of blood loss	378
Pre-operative assessment	364	Anaesthetic equipment	379
Problems of prematurity affecting anaesthesia	364	Airway equipment	379
		Other equipment	381
		Equipment for maintenance of body temperature	382

<i>Equipment for intravenous fluid administration</i>	383	Hirschsprung's disease	404
Anaesthetic monitoring	384	Anorectal anomalies	405
Cardiovascular monitoring	384	<i>Congenital diaphragmatic hernia (CDH)</i>	406
Blood pressure	384	Abdominal wall defects	413
<i>Precordial and oesophageal stethoscope</i>	384	<i>Hydrocoele</i>	413
Respiratory monitoring	385	Most commonly encountered acquired disorders	413
<i>Pulse oximetry</i>	385	<i>Necrotising enterocolitis (NEC)</i>	413
<i>Capnography</i>	385	<i>Spontaneous bowel perforation</i>	415
Temperature monitoring	385	Miscellaneous disorders	415
Post-operative care	385	<i>Cystic hygroma</i>	415
<i>Post-operative apnoeas</i>	386	<i>Teratoma</i>	416
<i>Post-extubation stridor</i>	386	<i>Ovarian cyst</i>	417
<i>Assessing the need for post-operative ventilation</i>	386	<i>Testicular torsion</i>	417
<i>Signs of respiratory distress</i>	387	<i>Biliary atresia</i>	417
Conclusion	387	Conclusion	418
Case study	388	Case study	418
Acknowledgements	388	Acknowledgements	419
References	388	References	419
16 Neonatal Surgery	392	17 Neonatal Transport	425
STEVIE BOYD AND ANNE ASPIN		STEVIE BOYD AND ANNE MITCHELL	
Introduction	393	Introduction	426
General principles of management	393	Personnel and training	427
<i>Thermoregulation</i>	394	Equipment	429
<i>Respiratory function</i>	394	Mode of transport	430
<i>Gastric decompression</i>	394	Risk management	432
<i>Fluid and electrolyte balance</i>	394	The emergency transport process	433
<i>Pharmacological support</i>	395	At the referring unit	434
<i>Transportation</i>	396	In the receiving unit	436
<i>Post-operative considerations</i>	396	Legal aspects of transport	437
Most commonly encountered congenital disorders	396	Areas for development	437
<i>Oesophageal atresia (OA) and tracheo-oesophageal fistula (TOF)</i>	396	Conclusion	438
Mechanical intestinal obstruction	400	Case study	438
Duodenal atresia	401	Acknowledgements	439
Small bowel atresia	401	References	439
Malrotation with volvulus	403	18 Medication in the Newborn	441
Meconium ileus	404	CATHERINE HALL AND PETER MULHOLLAND	
		Introduction	442

Unlicensed medicines	442	Registering the birth and death	467
Nurse prescribing	444	Perinatal autopsy	467
Pharmacokinetics	444	Funerals	468
Therapeutic drug monitoring (TDM)	449	Remembering	468
Drug administration	450	Conclusion	469
Conclusion	451	References	469
