

Building Acoustics and Vibration

Theory and Practice

Osama A. B. Hassan

Contents

Preface	vii
1. An Overview of Building Acoustics and Vibration	1
1.1 Scope of Building Acoustics	1
1.2 Sound in Theory and Practice	4
1.2.1 Nature of sound	4
1.2.2 Sound and vibration	8
1.2.3 Basic definitions, terms and measurable parameters	10
1.2.4 Mechanism of hearing	34
1.2.5 Sound and health	36
1.2.6 Sound levels	37
1.2.7 Loudness	41
1.2.8 Frequency weighting	43
1.2.9 Time weighting	46
1.2.10 Sound categories with respect to time	46
1.2.11 Vibration measurement, effect and estimation	47
1.3 Physical Ratings of Sound	50
1.3.1 Single value representation related to sound pressure	50
1.3.2 Energy-based ratings	58
1.3.3 Statistical ratings	60
1.4 Effects of Noise	60
1.4.1 Sound and noise	60
1.4.2 Noise control strategies	62
1.4.3 Exposure to outdoor and indoor noise	63
1.4.4 Exposure to environmental noise and its evaluation	67
1.4.5 Community noise	69

1.4.6 Noise survey and measurement	70
1.5 Sources of Noise and Vibration in Buildings	77
1.5.1 Industrial noise	77
1.5.2 Transportation noise	80
1.5.3 Construction noise	83
1.5.4 Domestic noise and noise from leisure activities.....	84
1.5.5 Regenerated and structure-borne noise.....	84
1.5.6 Vibration in buildings	86
1.6 Sound Insulation.....	89
1.6.1 Sound transmission paths in the room	89
1.6.2 Sound fields in a room.....	90
1.6.3 Impact sound.....	90
1.6.4 Flanking transmission.....	92
1.6.5 Common rating of sound insulation	92
1.6.6 Sound intrusion into the dwelling.....	95
1.6.7 Noise control treatment strategies.....	99
1.6.8 Common sound insulation measures	102
1.6.9 Sound control strategies.....	103
1.6.10 Acoustical design in practice	106
1.6.11 Mechanical service noise control.....	112
1.6.12 Treatments related to room acoustics	118
1.6.13 Insulation types.....	121
1.6.14 Masking noise.....	122
1.6.15 Resonance phenomenon	124
1.7 Sound Absorption.....	125
1.7.1 Mechanism of absorption	125
1.7.2 Categories of sound absorbers	128
1.7.3 Reverberation time and noise reduction	134
1.7.4 Practical issues on damping materials	135
2. Fundamental Building Acoustics	137
2.1 The Complex Number System	137
2.2 Wave Phase and Motion.....	141
2.2.1 Phase of wave	141
2.2.2 Phase interference.....	141
2.2.3 Simple harmonic motion.....	143
2.2.4 The RMS or effective value.....	144

2.3 Spectrum and Octave Bands	146
2.4 Acoustic Intensity and Fields	148
2.4.1 The free field	149
2.4.2 The diffuse field.....	152
2.4.3 Active and reactive sound fields.....	152
2.5 Propagation of Sound Waves	153
2.5.1 Reflection of sound.....	153
2.5.2 Dispersion and diffraction	154
2.5.3 Refraction	155
2.5.4 Geometric spreading of waves.....	156
2.6 Levels of Acoustics Quantities.....	159
2.7 Frequencies and Spectrum	159
2.7.1 Signal processing flow.....	160
2.7.2 Excitation types	162
2.8 Characteristic Impedance	162
2.9 Sound Waves in Air	166
2.9.1 Wave equation	166
2.9.2 Solution of the wave equation in one dimension.....	167
2.9.3 Solution of the wave equation in three dimensions	171
2.9.4 Sound pressure for coherent and incoherent sources.....	176
2.9.5 Spherical waves	177
2.9.6 Transmission of sound in media with normal incidence ...	177
2.9.7 Transmission of sound in media with oblique incidence...	181
2.9.8 Sound transmission through a wall.....	183
2.10 Absorption of Sound in a Medium.....	187
2.11 Waves in Elastic Solids	190
2.11.1 Pure longitudinal wave	190
2.11.2 Quasi-longitudinal wave.....	192
2.11.3 Transverse wave	196
2.11.4 Torsional wave	198
2.11.5 Bending (or flexural) wave.....	200
2.11.6 Group velocity	207
2.11.7 Body and surface waves	208
2.12 Bending Waves in Structures	211
2.12.1 Standing waves in a beam.....	212
2.12.2 Damping in structures.....	216
2.12.3 Bending wave equation for plate	220

2.12.4	Input force and moment impedances	225
2.12.5	Bending vibrations of finite plate/beams	226
2.13	Statistical Energy Analysis.....	230
2.13.1	Free plate	231
2.13.2	Two coupled plates	232
2.13.3	Coupled plate-room	236
2.13.4	Coupled room-plate	238
2.13.5	Coupled room-plate-room	241
2.14	Elementary Radiators	244
2.15	Sound Radiation from Structures	255
2.15.1	Radiation from infinite plates/beams	257
2.15.2	Radiation from finite plates/beams	263
2.15.3	Radiation efficiencies of finite plates	264
2.15.4	Analysis of radiated sound power.....	267
2.15.5	Influence of finiteness of plate on the radiation	273
2.15.6	Sound radiation control strategies	275
3.	Single Number Ratings and Test Methods	278
3.1	ISO and ASTM Rules	278
3.2	Airborne Sound Insulation	280
3.2.1	Sound reduction index/transmission loss.....	280
3.2.2	Weighted sound reduction index	285
3.2.3	Weighted standardised level difference.....	288
3.2.4	Adaptation terms.....	288
3.3	Measuring the Airborne Sound Insulation	292
3.3.1	Tests of sound insulation	293
3.3.2	Intensity approach.....	297
3.3.3	Measuring the reverberation time of a space	298
3.3.4	Measuring the sound absorption.....	299
3.4	Impact Sound Level	302
3.4.1	Weighted impact sound level.....	304
3.4.2	Impact sound improvement	306
3.4.3	Adaptation terms.....	308
3.4.4	The equivalent weighted impact sound level of a bare massive floor	310
3.4.5	On the standards of impact sound insulation	311
3.5	Outdoor- Indoor Noise Insulation	312

3.6 Weighted Sound Absorption Coefficient	316
3.7 Sound Insulation Regulations.....	319
3.7.1 British standards	319
3.7.2 Swedish standards.....	324
3.8 Sound Transmission Class	326
3.9 Impact Isolation Class	336
3.10 Other ASTM Rating Factors	339
3.10.1 Outdoor to indoor transmission class	339
3.10.2 Noise reduction coefficient.....	341
3.10.3 Ceiling attenuation class	341
3.10.4 Articulation class	343
3.11 Comparison between ISO and ASTM for Sound Insulation	344
3.11.1 STC vs. R_w	344
3.11.2 IIC vs. $L_{n,w}$	345
3.12 Sound Insulation Practices	345
3.13 Dose-Response Relationships and Sound Insulation	347
4. Airborne Sound Insulation	349
4.1 Background	349
4.2 Sound Reduction Index (Transmission Loss) of Single-Leaf Partitions	350
4.2.1 Region I: Stiffness-controlled region.....	352
4.2.2 Region II: Mass-controlled region.....	357
4.2.3 Coincidence region and the transmission loss	360
4.2.4 Region III: Damping-controlled region	364
4.2.5 Practical design guideless for a single wall	369
4.2.6 Examples of sound insulation of single-leaf walls	371
4.3 Approximate Methods for Estimating the Sound Reduction Index for Single Leaf Partitions.....	372
4.3.1 First approximate method.....	373
4.3.2 Second approximate method.....	374
4.4 Sound Reduction Index (Transmission loss) for Composite Walls	376
4.4.1 Background.....	377
4.4.2 Composite wall without mechanical connections.....	379
4.4.3 Design considerations for composite walls with no mechanical connections.....	389

4.4.4	Airflow resistivity and the transmission loss	393
4.4.5	Double constructions with mechanical connections	396
4.4.5.1	Rigid studs	397
4.4.5.2	Non-rigid studs	407
4.4.5.3	Discussion of results and assumptions	410
4.4.6	The influence of stud configuration on sound insulation ..	412
4.4.7	Double constructions in practice	413
4.4.8	Practical guidelines on the sound insulation of double constructions	420
4.5	External Lining for Sound Insulation.....	423
4.6	Multiple and Composite Partitions.....	428
4.6.1	Multi-leaf partitions	428
4.6.2	Transmission loss of composite walls	429
4.7	Sound Transmission Loss of Inhomogeneous and Orthotropic Plates.....	431
4.7.1	Composite panel of two laminated layers.....	431
4.7.2	Orthotropic plates	435
4.7.3	Sandwich plates	439
4.8	Sound Transmission through a Finite-Size Panel.....	445
4.8.1	Forced transmission	448
4.8.2	Resonant transmission	450
4.8.3	Total sound transmission loss	452
4.8.4	Literature review.....	454
4.8.5	Dependence of sound transmission loss on panel area	455
4.9	Transmission of Sound through Infinite Plate.....	457
4.9.1	Transmission loss of oblique incidence sound waves	457
4.9.2	Transmission of random-incidence (diffuse) sound through infinite plate	459
4.9.3	Discussion.....	461
4.10	The Loss Factor in Practice and Theory.....	463
4.11	Sound Transmission Loss of Holes and Slits	466
4.11.1	Calculation procedure	466
4.11.2	Acoustical treatment	470
	Appendix	472
5.	Impact Sound Isolation and Insulation of Floors	474
5.1	Prediction of Impact Sound.....	474

5.2 Impact Sound Improvement with Floor Coverings	481
5.3 Impact Sound Isolation in Practice.....	489
5.4 Floating Floors	499
5.4.1 Prediction of floating floor performance	500
5.4.2 Lightweight floors	512
5.4.3 Floating floors in practice.....	512
5.5 Particle-type Materials to Improve Impact Sound Insulation.....	514
5.6 Airborne Sound Insulation of Floor Constructions	515
5.6.1 Effect of floor coverings	516
5.6.2 Effect of floating floor	517
5.6.3 Special floor types	517
5.6.4 Effect of suspended ceilings on sound insulation and isolation	518
5.6.5 Leak of sound via ceiling system.....	525
5.7 The Relation between Impact Sound and Transmission Loss.....	527
6. Flanking Sound Transmission	531
6.1 Airborne Sound Insulation	531
6.2 Impact Sound Level	538
6.3 Prediction of the Vibration Attenuation of the Junction	543
6.3.1 Velocity level difference.....	543
6.3.2 Vibration reduction index	550
6.4 Laboratory/ <i>In-situ</i> Measurement of Flanking Transmission.....	555
6.5 Using the SEA to Predict the Flanking Transmission.....	557
6.6 Practical Issues on Flanking Transmission Calculations	559
6.7 Approximate Model of Flanking Transmission	567
6.8 On the Measurement of Flanking Transmission	571
6.9 Common Practical Measures to Mitigate the Effect of Sound Flanking	573
6.9.1 Lightweight concrete	573
6.9.2 Façades	574
6.9.3 Lightweight walls / floors.....	576
6.9.4 Flanking paths - sealing gaps.....	579
7. Sound Insulation of Doors and Windows	581
7.1 Doors	581
7.1.1 An overview	581

7.1.2 Practical considerations	585
7.1.3 Sound reduction index of door in buildings.....	589
7.2 Windows/ Façade Insulation	590
7.2.1 Sound insulation of façades and windows.....	590
7.2.2 Practical issues on sound insulation of windows.....	594
7.2.3 Insulation values of façade/window	597
7.2.4 Factors affecting the sound insulation of windows	603
Appendix	617
8. Outdoor Sound Propagation	620
8.1 Propagation of Sound in Real Atmosphere - Excess Attenuation Model	620
8.2 Atmospheric Absorption - A_{abs}	622
8.3 Meteorological Conditions - A_{weather}	624
8.4 Ground Effect - A_{ground}	627
8.4.1 Calculation.....	628
8.4.2 Practical implications.....	632
8.5 Atmospheric Turbulence - $A_{\text{turbulence}}$	634
8.6 Vegetation - $A_{\text{vegetation}}$	635
8.7 Barriers - A_{barrier}	638
8.7.1 Acoustical barrier wall performance	639
8.7.2 Sound pressure level across barrier	646
8.7.3 Design consideration of barriers and practical implications	647
8.7.4 Advanced model for barrier attenuation	654
8.8 Non-Point Sources	658
8.9 Determination of Source Strength.....	659
8.10 Feasibility of Excess Attenuation Model	660
8.11 Other Propagation Models	661
8.12 Traffic Noise	662
9. Room Acoustics	666
9.1 Propagation of Sound in a Room (Indoor Sound).....	666
9.1.1 Steady-state sound level in a room	667
9.1.2 Steady-state sound level with absorption in the air	674
9.2 Reverberation Time.....	679
9.2.1 Reverberation time in typical rooms.....	679

9.2.2 Reverberation time with absorption in the air	684
9.2.3 Room design for optimum reverberation time.....	687
9.3 Reverberation Time and Room Acoustical Design.....	689
9.4 Sound from Adjacent Room.....	692
9.5 Standing Waves in Room.....	696
9.5.1 Types of modes in room	698
9.5.2 Spectrum of sound pressure in room	701
9.5.3 Acoustic design and room modes	702
9.6 Room Absorption in Practice	705
9.7 Acoustic Barriers in Rooms	709
9.8 Speech Intelligibility	712
9.9 Acoustics Enclosures.....	714
9.9.1 Small acoustic enclosures	715
9.9.2 Large acoustic enclosures	719
9.9.3 Acoustic enclosures in practices	726
Appendix	729
10. Air Distribution System Noise	741
10.1 Background	741
10.2 Fan Noise	744
10.3 Noise Attenuation in Air Distribution Systems.....	751
10.3.1 Attenuation in branches	752
10.3.2 Attenuation in straight unlined duct runs.....	753
10.3.3 Attenuation in straight lined duct runs.....	754
10.3.4 Attenuation in bends (elbows).....	756
10.3.5 The attenuation of sound at the open end (end reflection)	758
10.3.6 Flow-induced noise in air distribution system fittings.....	759
10.3.7 Flow noise generation in grilles.....	761
10.3.8 Sound pressure level in room from grille	764
10.4 Control of Noise in Air Distribution Systems	774
10.4.1 Absorptive or dissipative silencers	776
10.4.2 Reactive or reflective silencers	783
10.4.3 Dispersive or diffuser silencers	784
10.4.4 Packless duct silencers.....	785
10.4.5 Active silencers.....	785
10.4.6 Practical considerations	786

10.5 Control of Structure-borne Noise and Vibration.....	789
10.6 Duct Noise.....	790
10.6.1 Breakout sound.....	791
10.6.2 Breakin sound transmission into ducts.....	795
10.6.3 Crosstalk.....	797
10.6.4 Control of duct noise.....	799
10.6.5 Round and rectangular ducts.....	803
10.7 Final Remarks.....	805
10.7.1 Cut-off frequency.....	805
10.7.2 Point, line and plane sound source.....	805
10.7.3 Flow generated (regenerated) noise.....	807
11. Vibrations in Buildings.....	808
11.1 Background.....	808
11.2 SDOF System (Simple Resonator).....	810
11.2.1 General case.....	811
11.2.2 Free motion of the damped SDOF system.....	813
11.2.3 Solution of the forced vibration.....	815
11.2.4 Natural frequency versus deflection.....	818
11.2.5 Magnification factor and transmissibility.....	820
11.2.6 Structurally damped systems.....	825
11.2.7 Forced vibration caused by motion excitation.....	826
11.2.8 Frequency response functions.....	829
11.3 Damping Factors.....	832
11.4 Design Considerations for Resilient Elements.....	837
11.4.1 Rubber and rubber-like materials.....	838
11.4.2 Metal and other elastic isolators.....	840
11.4.3 Combination of isolators.....	842
11.4.4 Vibration isolation in practice.....	844
11.5 Floor Vibrations.....	844
11.5.1 Human perception of vibration.....	846
11.5.2 Acceptance criteria.....	849
11.5.3 Fundamental frequency of floor.....	853
11.5.4 Floor response.....	856
11.5.5 Practical design issues.....	860
11.5.6 Modal mass.....	861
11.5.7 Damping of floors.....	862

11.5.8 Acceptable floor performance	864
11.6 Practical Measures for Excessive Floor Vibrations	867
11.7 Mobility Method	870
11.7.1 Analysis of vibration isolation.....	872
11.7.2 Outline of structural vibration analysis.....	881
11.7.3 Cavity wall ties	884
11.8 Linear and Nonlinear Vibrations.....	886
Appendix 1. Summary of Building Acoustic Measurements	888
Appendix 2. Sound Insulation of Common Constructions: ISO and ASTM Ratings	895
Appendix 3. Sound Reduction Indices (Transmission losses) of Some Common Constructions	920
Bibliography	927
Index	943
