Infrastructure Health in Civil Engineering

Theory and Components

CRC Press
Taylor & Francis Group

Contents

Preface.....	xxi
Acknowledgments.....	xxv
Authors.....	xxvii
Chapter 1 Introduction.....	1
1.1 Infrastructure Health in Civil Engineering (IHCE).....	1
1.2 <i>General Concepts of Infrastructures Health</i>	5
1.2.1 What Are Infrastructures?.....	5
1.2.2 What Is Structural Health?.....	5
1.2.3 Infrastructure Health in Civil Engineering.....	6
1.2.3.1 General Examples.....	6
1.2.3.2 Objectives of IHCE.....	8
1.2.4 The 95% Solution!.....	9
1.3 History of Structural Health Efforts.....	9
1.3.1 Overview.....	9
1.3.2 Fulfilling Defined Objectives.....	10
1.3.3 Operations and Management.....	12
1.4 Need for Infrastructure Health Efforts.....	12
1.4.1 Overview.....	12
1.4.2 Specific Needs.....	13
1.4.3 Case Studies for Uses of IHCE.....	15
1.4.3.1 Cost and Bridge Management.....	15
1.4.3.2 Benchmark Bridge Behavior.....	15
1.4.3.3 Inspection and Rehabilitation.....	15
1.4.3.4 Monitoring Specific Bridge Types.....	16
1.5 Analogy with Human Health.....	18
1.6 Structural Health: A New Field in Civil Engineering?.....	21
1.6.1 What Constitute a New Field?.....	21
1.7 Structural Health: Integration of Fields.....	23
1.8 Horizontal Integration: Multihazards.....	24
1.8.1 Introduction to Multihazards.....	24
1.8.1.1 General.....	24
1.8.1.2 What Is Not Multihazards.....	25
1.8.2 Theory of Multihazards.....	25
1.8.3 Multihazards Categories and Structural Health.....	26
1.8.4 Multihazards and Infrastructure Health.....	27
1.8.4.1 General.....	27
1.8.4.2 Structural Health Monitoring.....	28
1.8.5 Benefits versus Limitations.....	28
1.9 Vertical Integration: Multidisciplinary.....	31
1.9.1 Different Disciplines and SHCE.....	31
1.9.2 Treatment of SHCE Multidisciplinary Needs in Infrastructure Health Environment.....	31
1.10 SHM and IHCE: A Quick Primer.....	32
1.11 Challenges Ahead.....	33

1.11.1	General.....	33
1.11.2	Manual versus Automatic Inspection.....	35
1.11.3	Climate Change.....	36
1.12	Appendix I: DHS Infrastructure Sectors (as of 2009).....	38
	References	39
Chapter 2	Elements of Structural Health in Civil Engineering (SHCE)	41
2.1	SHCE: A New Field in Civil Engineering?.....	41
2.1.1	This Chapter.....	41
2.2	SHCE: Baseball Analogy	43
2.2.1	Health Monitoring from Start to Finish.....	43
2.2.2	Home Plate: Problem Definition	43
2.2.2.1	First Base: Measurements.....	43
2.2.2.2	Second Base: Structural ID	46
2.2.2.3	Third Base: Damage Detection	46
2.2.2.4	Fourth Base (Home Plate): Decision Making.....	46
2.2.3	Example.....	48
2.2.4	Bringing All Together	49
2.3	SHCE and DESIGN Paradigms.....	50
2.3.1	General	50
2.3.1.1	Statistical Pattern Recognition	50
2.3.2	Capacity/Demand Design.....	51
2.3.2.1	General.....	51
2.3.2.2	Capacity/Demand Ratio as the True Measure of Structural Health	52
2.3.3	Performance-Based Design.....	57
2.3.3.1	Overview.....	57
2.3.3.2	Prescriptive versus Performance Design Paradigms.....	57
2.3.3.3	Modern versus Traditional PBD	59
2.3.3.4	Elements of PBD.....	59
2.3.3.5	Future Trends of PBD	64
2.3.3.6	Role of SHCE and PBD	65
2.4	NDT versus SHM.....	70
2.4.1	Overview	70
2.4.2	NDT Tools for Different SHM/SHCE Components	70
2.4.3	NDT, SHCE/SHM Tools and Bridge Hazards	70
2.4.4	Closing Remarks	75
2.5	Value of Information	76
2.5.1	Introduction	76
2.5.2	General Approach to Evaluate Value of Information.....	77
	References	78
Chapter 3	Lives and Deaths of Infrastructure	81
3.1	Overview	81
3.1.1	Enabling versus Triggering Causes.....	81
3.1.2	This Chapter.....	81
3.2	Birth of Bridges	82
3.2.1	Ensuring Healthy Life	82
3.2.1.1	Preliminary Planning	83

	3.2.1.2	Design Phase.....	83
	3.2.1.3	Construction Phase	84
	3.2.1.4	Quality Control/Quality Assurance (QA/QC).....	85
	3.2.2	Role of SHCE	87
3.3		Why Bridges Live?	87
	3.3.1	Definitions of Healthy Life.....	87
	3.3.2	Classification of Healthy Life Causes	87
	3.3.2.1	Enabling Causes of Healthy Life.....	87
	3.3.2.2	Triggering Causes of Healthy Life	89
	3.3.3	Quantification of Healthy Life	89
	3.3.3.1	Conventional Metrics.....	89
	3.3.3.2	Healthy Life Causes as Metrics.....	93
	3.3.4	Role of SHM.....	96
3.4		Why Bridges Fail/Die?	97
	3.4.1	Definitions of Failure	97
	3.4.2	Classification of Failure Causes	100
	3.4.2.1	Triggering Causes.....	100
	3.4.2.2	Enabling Causes	102
	3.4.2.3	Estimating Bridge Failure Propensity to Causes.....	102
	3.4.2.4	SHM/SHCE Role.....	105
	3.4.3	Attributes of Failure	105
	3.4.4	Structural Modes of Failure	108
	3.4.4.1	Ductile Failure	108
	3.4.4.2	Brittle Failure.....	109
	3.4.4.3	Global Failure	110
	3.4.4.4	Progressive Failure (Collapse)	110
	3.4.4.5	Mitigation Strategies and Failure Modes.....	110
3.5		Examples of Bridge Failures	115
	3.5.1	Introduction.....	115
	3.5.2	Tay Rail Bridge, UK.....	115
	3.5.3	Quebec Bridge Failure	116
	3.5.4	Tacoma Narrows, WA	117
	3.5.5	Silver Bridge, OH.....	121
	3.5.6	Mianus River Bridge Collapse	122
	3.5.7	Schoharie Bridge Collapse	124
	3.5.8	I-35 Bridge, Minneapolis, MN.....	126
3.6		Appendix I: Count of Bridges in the United States by Construction Material	130
		References	130

Chapter 4		Theories and Principles of IHCE	133
	4.1	Introduction	133
	4.2	General Theory of Experimentation (GTE)	135
	4.2.1	Introduction.....	135
	4.2.2	Overview of GTE.....	136
	4.2.3	Proof of GTE.....	137
	4.2.3.1	General.....	137
	4.2.3.2	Corollary # 1: Types of Experiments and α_{GTE}	139
	4.2.3.3	Corollary # 2: Initial Conditions.....	141
	4.2.4	Practical Applications	141

4.2.4.1	General.....	141
4.2.4.2	Identifying Goals	142
4.2.4.3	Identifying Algorithms	142
4.2.4.4	Needed Type of Measurements (TOM).....	142
4.2.4.5	Values of Parameters	142
4.2.4.6	Parameter Cost Evaluation	143
4.2.4.7	Value–Cost (V–C) Diagram.....	143
4.2.4.8	Critical Magnitudes: V_{cr} and C_{cr}	143
4.2.4.9	Summary of the Steps.....	143
4.2.5	Examples of General Theory of SHM	144
4.2.5.1	Frequency Analysis.....	144
4.2.5.2	Corrosion FRP Mitigation Efficiency.....	146
4.3	Special Theory of Experimentation (STE).....	147
4.3.1	Introduction	147
4.3.2	Overview of STE.....	150
4.3.3	Proof of STE.....	151
4.3.3.1	Optimality of Sensor Type.....	151
4.3.3.2	Optimality of Sensor Number	151
4.3.3.3	Optimality of Sensor Location	153
4.4	Theory of SHM Triangulation.....	153
4.4.1	Theory Statement	153
4.4.2	Proof of Theory	154
4.4.3	Discussion and Applications	155
4.4.3.1	General Discussion	155
4.4.3.2	Case Study	156
4.4.4	Evaluating Detectability of SHM Schemes.....	157
4.4.4.1	Numerical Method for Evaluating Detectability	158
4.4.4.2	Subjective Method for Evaluating Detectability	160
4.4.5	Triangulation Cost–Benefit Analysis	160
4.4.5.1	Analytical Considerations.....	160
4.4.5.2	Case Studies.....	161
4.4.6	Concluding Remarks	162
4.5	Duality Principle in SHM.....	162
4.6	Scaling Principle in SHM.....	164
4.6.1	Overview	164
4.6.2	One-Dimensional Scales	164
4.6.2.1	Frequency Spectrum.....	164
4.6.2.2	Sensor Density	165
4.6.2.3	Scaling in Structural Identification.....	165
4.6.2.4	Scaling in Damage Identification	166
4.6.2.5	Hazard (Demand) Scale.....	167
4.6.3	Two-Dimensional Scale.....	167
4.6.4	Scales of Higher Dimensions: Role of Decision Making.....	167
4.6.5	Benefits of Scale Considerations in SHM	170
4.7	Serendipity Principle in SHM	170
	References	172
Chapter 5	Sensors and Infrastructure Health.....	175
5.1	Introduction	175
5.1.1	Sensing and Infrastructure Health	175

- 5.1.2 This Chapter..... 175
- 5.2 Sensor Categorizations 176
- 5.3 Basics of Sensor Behavior 178
 - 5.3.1 Voltage-Generating Sensors..... 179
 - 5.3.1.1 Piezoelectric..... 179
 - 5.3.1.2 Other 180
 - 5.3.2 Resistive Sensors 180
 - 5.3.2.1 Wheatstone Bridge..... 181
 - 5.3.3 Change of Capacitance..... 182
 - 5.3.4 Linear Variable Differential Transformers (LVDT) 182
 - 5.3.5 Optics 183
 - 5.3.6 Other..... 183
 - 5.3.7 NDT-Specific..... 183
- 5.4 Sensor Measurements in SHM 183
 - 5.4.1 Overview 183
 - 5.4.2 Strain Sensors..... 184
 - 5.4.2.1 General..... 184
 - 5.4.2.2 Foil Strain Gages 184
 - 5.4.2.3 Demountable Strain Gages/Strain Transducers..... 186
 - 5.4.2.4 Vibrating Wire Gages 188
 - 5.4.3 Position 189
 - 5.4.4 Accelerometers (Angular and Linear)..... 191
 - 5.4.4.1 LVDT-Based Accelerometers 191
 - 5.4.4.2 Piezoelectric Sensor Accelerometers..... 192
 - 5.4.5 Velocities (Angular and Linear) 193
 - 5.4.6 Displacements (Angular and Linear) 194
 - 5.4.7 Force 194
 - 5.4.8 Inclinometers..... 197
 - 5.4.9 Corrosion..... 199
 - 5.4.10 Pressure 200
 - 5.4.11 Temperature..... 201
 - 5.4.12 Other Sensors in SHM 201
 - 5.4.13 Advanced Sensing Technologies..... 201
 - 5.4.13.1 Microelectromechanical systems (MEMS) Technology..... 201
 - 5.4.13.2 Friction-Based Strain Sensing 202
 - 5.4.13.3 Scour Sensing 202
 - 5.4.13.4 Innovative ETDR Sensing 202
- 5.5 Emerging Technology: Fiber Optics Sensors 204
 - 5.5.1 Introduction 204
 - 5.5.1.1 General..... 204
 - 5.5.1.2 Time of Flight and FOS..... 206
 - 5.5.1.3 Different Modes of FOS 206
 - 5.5.1.4 ToMs of FOS..... 206
 - 5.5.2 Local FOS: Bragg Grating 206
 - 5.5.2.1 Applications of FBG..... 208
 - 5.5.3 Local FOS: Fabry-Perot 209
 - 5.5.4 Distributed (Long) FOS: Optical Time Domain Reflectometry (OTDR)..... 211
 - 5.5.4.1 BOTDR in SHM..... 212

5.5.5	Distributed (Long) FOS: Brillouin Optical Time Domain Analysis (BOTDA).....	213
5.5.5.1	Smart BOTDA.....	213
5.5.6	Comparison between Local and Distributed FOS	214
5.5.7	FOS Use in NDT versus SHM.....	214
5.5.8	Value (Cost–Benefit) of FOS.....	216
5.5.8.1	Advantages and Disadvantages of FOS.....	216
5.5.8.2	Objective Cost–Benefit Analysis of FOS.....	217
5.5.9	Case Studies—Applications.....	219
5.5.9.1	Overall SHM Experiment.....	219
5.5.9.2	Monitoring Composite Rebars.....	221
5.6	Wireless Sensors.....	221
5.6.1	Overview	221
5.6.1.1	Composition of Wireless Sensor Units	221
5.6.1.2	Composition of Wireless Sensor Network.....	222
5.6.1.3	Wireless Sensors and SHM	223
5.6.2	Case Studies	224
5.6.2.1	Trout Brook Bridge.....	224
5.6.2.2	Geumdang Bridge.....	225
5.6.2.3	Benjamin Franklin Bridge, PA	226
5.6.3	Wireless Sensors—Specific Methods and Techniques	230
5.6.3.1	RFID in Civil Infrastructure	230
5.6.3.2	Web-Based Systems.....	232
5.6.3.3	Structural Identification.....	232
5.6.3.4	Damage Identification.....	234
5.6.3.5	Remote Programmability	236
5.6.3.6	Decision Making	236
5.7	Smart Structures.....	236
5.7.1	What Is a Smart Structure?	236
5.7.1.1	Smart Structures and Smart Materials	238
5.7.2	Smart Structures and IHCE Components	239
5.7.3	Emerging Paradigms for Smart Structures	241
5.8	Optimum Sensor Selection.....	242
5.8.1	Overview	242
5.8.2	General Parameters	242
5.8.2.1	Objectives of Sensing/Project.....	242
5.8.2.2	Type of Structure	243
5.8.2.3	Physical Parameter for Sensing (ToM).....	243
5.8.2.4	Monitoring Time Span.....	243
5.8.2.5	Operating Environment	243
5.8.2.6	Assembly/Maintenance/Disassembling (Excluding Labor Cost)	245
5.8.2.7	Cost.....	245
5.8.2.8	Instrumentation Type.....	246
5.8.2.9	User Knowledge/Experience	246
5.8.2.10	Sensitivity/Range/Resolution.....	246
5.8.2.11	Sensor Physical Attributes.....	247
5.8.2.12	Formalizing Sensor Choice Parameters	247
5.8.3	Decision Tree Method.....	248
5.8.4	Sensor Utility Method.....	250
5.9	Optimum Sensor Location	252

- 5.9.1 Overview 252
- 5.9.2 Analytical Treatment..... 253
 - 5.9.2.1 General..... 253
 - 5.9.2.2 OSL Methodology 253
 - 5.9.2.3 Stress Ratio–Based OSL..... 255
 - 5.9.2.4 Multiple Loading Conditions—Goal Programming 255
- 5.9.3 Case Studies 255
 - 5.9.3.1 Steel Transmission Tower 256
 - 5.9.3.2 Suspension Bridge 258
- 5.9.4 Closure: Importance of OSL for SHM..... 261
- 5.10 Step by Step Guide for Choosing Sensors 262
- 5.11 Remote Sensing in SHM 262
 - 5.11.1 Overview 262
 - 5.11.2 Types of RS 263
 - 5.11.2.1 Type I: Sensors Attached to Subject..... 263
 - 5.11.2.2 Type II: Sensors Attached to Robots 264
 - 5.11.2.3 Type III: Remote Sensors, Passive RS..... 264
 - 5.11.2.4 Type IV: Remote Sensors, Active RS 265
 - 5.11.3 Technical Aspects of Remote Sensing 269
 - 5.11.3.1 Penetration versus Backscatter 269
 - 5.11.3.2 Decision Making 271
 - 5.11.4 Current Applications in SHM 271
 - 5.11.4.1 Thermography 271
 - 5.11.4.2 Ground Penetrating Radar (GPR)..... 273
 - 5.11.4.3 Thermoelastic Method..... 274
 - 5.11.4.4 Correlating Load Level with Surface-Wave Laser Measurements..... 275
 - 5.11.5 Closing Remarks 275
- References 276

- Chapter 6** Structural Identification (STRID) 281
 - 6.1 Introduction 281
 - 6.1.1 Two-Dimensionality of Modern STRID Techniques..... 281
 - 6.1.2 Definition of STRID..... 281
 - 6.1.3 Objectives of STRID..... 282
 - 6.1.4 General Model of Structural Identification 282
 - 6.1.5 General Methods of STRID 284
 - 6.1.6 Static versus Dynamic STRID..... 284
 - 6.1.7 This Chapter..... 284
 - 6.2 STRID Processes..... 285
 - 6.2.1 Generalized Classifications of STRID..... 285
 - 6.2.2 STRID: Interrelation of Time and Space Modeling Issues..... 285
 - 6.2.2.1 Frequency and Space Scales..... 285
 - 6.2.2.2 Objectives of STRID and Frequency-Space Domain..... 289
 - 6.2.2.3 Methods of STRID and Frequency-Space Domain..... 290
 - 6.3 Modal Identification Methods 291
 - 6.3.1 Theoretical Background..... 291
 - 6.3.1.1 Overview..... 291
 - 6.3.1.2 Equations of Motion 293
 - 6.3.1.3 Modal Solution 293

6.3.1.4	Frequency Response Function (FRF).....	294
6.3.1.5	Impulse Response Function (IRF).....	295
6.3.1.6	Pseudo Inverse	295
6.3.1.7	Singular Value Decomposition (SVD).....	295
6.3.1.8	Modal Assurance Criteria (MAC).....	296
6.3.1.9	Matrix and Vector Norms.....	296
6.3.2	Order of System Models.....	296
6.3.3	Attributes of Modal Identification methods.....	297
6.3.4	Peak Amplitude.....	298
6.3.5	Eigensolution Realization Method (ERA)	299
6.3.6	Ibrahim Time Domain (ITD) Methods.....	300
6.3.7	LSCE (Least Square Complex Exponential).....	302
6.3.8	Random Decrement.....	303
6.3.8.1	General.....	303
6.3.8.2	Overview of Problem.....	303
6.3.8.3	Theoretical Background	304
6.3.8.4	Infrastructure Application	310
6.3.8.5	Concluding Remarks	311
6.4	Parameter Identification (PI).....	313
6.4.1	Problem Definition	313
6.4.2	Eigenstructure Assignment Update.....	313
6.4.2.1	Summary of Input/Output Measurements/Testing	315
6.4.2.2	Advantages/Disadvantages and Applicability to SHM	315
6.4.3	Optimal Matrix Update (OMU).....	316
6.4.3.1	General Description.....	316
6.4.3.2	Advantages/Disadvantages and Applicability to SHM	316
6.4.4	Sensitivity-Based Update	316
6.4.4.1	Sanayei Static-Based Methods.....	316
6.4.4.2	Advantages/Disadvantages and Applicability to SHM	319
6.4.5	Other Parameter Identification Methods.....	319
6.5	Artificial Neural Networks (ANN)	320
6.5.1	Introduction	320
6.5.2	Basic Developments of ANN.....	321
6.5.2.1	Single Layer ANN	321
6.5.2.2	Multilayer ANN: Versatile Complex Problems.....	323
6.5.2.3	Theoretical Background of Multilayer ANN.....	323
6.5.3	Advanced Topics	326
6.5.3.1	ANN versus FEM.....	326
6.5.3.2	Neural Network, Regression Analysis, and Expert Systems	326
6.5.3.3	Training versus Validation.....	328
6.5.3.4	Batch and Online Learning	328
6.5.3.5	Supervised versus Nonsupervised Learning	328
6.5.3.6	How to Design a Neural Network.....	328
6.5.4	Applications of Neural Networks in SHM Field.....	329
6.5.5	Examples and Case Studies.....	330
6.5.5.1	Single Input, Single Output: Linear Neural Network.....	330
6.5.5.2	Nonlinear Spring Behavior	330
6.5.5.3	Bridge Scour	333
6.6	Other Methods.....	335
6.6.1	Frequency Ranges	335

- 6.6.2 Energy-Based Methods 337
 - 6.6.2.1 Statistical Energy Analysis (SEA) 337
 - 6.6.2.2 Energy Finite Element Analysis (EFEA) 338
 - 6.6.2.3 Concluding Remarks 339
- 6.6.3 Dispersion Analysis..... 341
- 6.6.4 Genetic Algorithms 341
- 6.7 Modeling Techniques 342
 - 6.7.1 Overview 342
 - 6.7.2 Soil-Structure Interaction Role in Structural Identification Problem 342
 - 6.7.3 Soil-Structure Interaction Role in Damage Identification Problem 344
 - 6.7.4 Fluid-Structure Interaction (FSI) in STRID Problem..... 344
 - 6.7.5 Static Condensation Modeling Techniques 345
 - 6.7.6 Scaling Needs..... 346
 - 6.7.7 Multihazards Considerations and STRID 347
 - 6.7.7.1 Modal Identification..... 347
 - 6.7.7.2 Parameter Identification..... 347
 - 6.7.7.3 Neural Networks 348
- 6.8 Scale Independent Methods (SIM)..... 349
 - 6.8.1 Scale Independent Element 349
 - 6.8.1.1 Overview..... 349
 - 6.8.1.2 Theory..... 350
 - 6.8.1.3 Efficiency of SIE Method 352
 - 6.8.1.4 Examples..... 353
 - 6.8.1.5 Closing Remarks..... 357
- 6.9 Case Studies..... 358
 - 6.9.1 General 358
 - 6.9.2 Generating Baseline Models 358
 - 6.9.3 Scour STRID..... 358
 - 6.9.4 Foundation Identification 359
 - 6.9.5 Condition Assessment for Existing Bridges..... 360
 - 6.9.6 Signal Processing 362
 - 6.9.7 Optimal Sensor Locations (OSL) 363
 - 6.9.8 STRID as a Component in SHM..... 364
- 6.10 Life Cycle Analysis and STRID..... 365
- 6.11 Cost–Benefit Analysis of STRID 367
- References 369

- Chapter 7 Damage Identification (DMID) 373**
 - 7.1 Introduction 373
 - 7.1.1 Mathematical Representation of Damage 373
 - 7.1.2 Identification Adequacy, Utility, and Prioritization of DMID Methods..... 373
 - 7.1.3 This Chapter 374
 - 7.2 Damage Parameters..... 374
 - 7.3 STRID, DMID, and SHM 376
 - 7.3.1 Overview 376
 - 7.3.2 Objectives of STRID and DMID 378
 - 7.3.2.1 Objectives of STRID 378

	7.3.2.2 Objectives of DMID	378
7.3.3	Definition and Classifications of Damage	378
	7.3.3.1 Physical Classifications.....	379
	7.3.3.2 Detectability Classification.....	379
7.3.4	STRID Methods and Inferred Damage Identification	379
	7.3.4.1 Overview.....	379
	7.3.4.2 Factors Affecting Inferred Damage Detection	380
	7.3.4.3 Summary	382
7.3.5	Guide for Using STRID as a DMID Tool	382
7.3.6	Closing Remarks	383
7.4	NDT Techniques.....	383
7.4.1	Introduction to NDT Concepts and Methods.....	383
7.4.2	Ultrasound Methods.....	386
	7.4.2.1 Overview.....	386
	7.4.2.2 Theoretical Background	387
	7.4.2.3 Impact-Echo.....	387
	7.4.2.4 Pulse-Echo (Normal Waves).....	390
	7.4.2.5 Guided (Lamb) Waves	392
	7.4.2.6 Ultrasonic Vibration	395
	7.4.2.7 Laser-Based Ultrasound (LBU).....	396
	7.4.2.8 Applications in SHM	398
7.4.3	Thermography	400
	7.4.3.1 Overview.....	400
	7.4.3.2 Categories of Thermography	400
	7.4.3.3 Geometric-Based: Heating Methods	401
	7.4.3.4 Time-Based Thermal Application Methods	402
	7.4.3.5 Sensing.....	402
	7.4.3.6 Applications in SHM	403
7.4.4	Electromagnetic Methods.....	403
	7.4.4.1 Overview.....	403
	7.4.4.2 Eddy Current	403
	7.4.4.3 Magnetic Particle (MP)	408
	7.4.4.4 Static Magnetic Field (SMF)	411
	7.4.4.5 Electromagnetic Waves: Microwaves or Radio Waves.....	412
	7.4.4.6 Applications in SHM	413
7.4.5	Penetrating Radiation.....	413
	7.4.5.1 Overview.....	413
	7.4.5.2 Computed Tomography	417
	7.4.5.3 Computed (Compton) Backscatter.....	419
	7.4.5.4 Applications in SHM	419
7.4.6	Other Methods.....	419
	7.4.6.1 Visual Methods.....	419
	7.4.6.2 Liquid Penetrant.....	420
	7.4.6.3 Optical Methods	421
	7.4.6.4 Applications in SHM	422
7.5	Acoustic Emission.....	423
7.5.1	Overview	423
7.5.2	Theoretical Background.....	423
	7.5.2.1 Basics of AE	423
	7.5.2.2 Kaiser, Dunegan, and Felicity Behavior of AE	424
	7.5.2.3 Emission Initiation and Propagation.....	425

	7.5.2.4	Important Characteristics of AE Wave.....	425
	7.5.2.5	AE Data Filtering	426
	7.5.2.6	Calibration of AE Sensors	427
	7.5.2.7	Source Location.....	427
	7.5.2.8	Properties of AE as Related to SHM.....	429
7.5.3		AE versus Other NDT Methods.....	429
7.5.4		Applications in SHM—General.....	430
	7.5.4.1	General.....	430
	7.5.4.2	Types of AE Tests in Infrastructure	431
	7.5.4.3	Applications in SHM	431
7.5.5		Corrosion Rate Measurements (Continuous AE).....	431
7.5.6		Proof Loading (Burst AE).....	434
7.5.7		Quality Control (QC)	434
7.5.8		Incipient Failure Detection (IFD).....	435
7.5.9		Failure of High Strength Wires.....	437
7.5.10		Local Area Monitoring (LAM).....	438
7.5.11		Advantages and Disadvantages of AE	441
7.6		Vibration-based Methods.....	442
	7.6.1	General	442
	7.6.2	Overview of Methods.....	442
	7.6.2.1	Changes in Modal Properties	442
	7.6.2.2	Utilization of Numerical Formulations FEM/BEM	443
	7.6.3	Case Study I: Theoretical Simulation of DMID Procedures	445
	7.6.3.1	Introduction	445
	7.6.3.2	Vibration-Based DMID methods.....	445
	7.6.3.3	Results.....	447
	7.6.3.4	Conclusions.....	451
	7.6.4	Case Study II: I-40 Bridge Experiment.....	452
7.7		Signal Processing and DMID	455
	7.7.1	Time Signals.....	455
	7.7.2	Fourier-Based Transforms.....	457
	7.7.2.1	Conventional Fourier Transforms.....	457
	7.7.2.2	Time and Frequency Transforms.....	459
	7.7.2.3	Time-Fourier Transforms (TFT)	460
	7.7.3	Wavelets.....	460
	7.7.3.1	Introduction	460
	7.7.3.2	Wavelet Functions.....	463
	7.7.3.3	Heisenberg Principle.....	464
	7.7.3.4	Basic Example of DWT	464
	7.7.3.5	Applications of Wavelets in Damage Identification.....	466
	7.7.4	Hilbert–Hwang Transform	469
	7.7.4.1	General.....	469
	7.7.4.2	Instantaneous Frequency	469
	7.7.4.3	Sifting Process	471
	7.7.4.4	Hilbert Spectrum	472
	7.7.4.5	Use in SHM: Earthquake Applications	474
	7.7.4.6	WT versus HHT in Infrastructure Applications.....	475
	7.7.5	Signal Processing as an Integrator of DMID Methods	477
	7.7.5.1	Use of Correlation and Operational Modal Analysis	477
	7.7.5.2	Filtering Multihazards Effects.....	479
	7.7.6	Rules for Using Signal Processing Tools	480

7.8	Damage Identification in SHM.....	481
7.8.1	General.....	481
7.8.2	Important Considerations.....	481
7.8.3	Interactions with Other SHCE Components.....	481
7.8.4	Common Bridge Damages and SHM Applications.....	482
7.9	Appendix: Lamb Waves.....	483
7.10	Appendix: Dispersion Curves.....	483
7.11	Appendix: Helmholtz Equation.....	489
7.12	Appendix: Angular Spectrum Method.....	490
	References.....	490
Chapter 8	Decision Making in IHCE.....	495
8.1	Introduction.....	495
8.2	Decision Making Process and Structural Health Components.....	496
8.2.1	Introduction.....	496
8.2.2	Sensors and Measurements: Data Collection.....	497
8.2.3	Structural Identification: Vulnerabilities and Mitigation.....	498
8.2.4	Damage Identification.....	499
8.2.5	Decision Making.....	500
8.3	Probability and Statistics.....	502
8.3.1	Introduction.....	502
8.3.2	Statistics.....	502
8.3.2.1	Data Collection.....	502
8.3.2.2	Frequency and Histograms.....	502
8.3.2.3	Random Variables.....	502
8.3.3	Probability Distribution.....	503
8.3.3.1	Discrete versus Continuous Distributions.....	503
8.3.3.2	Expectations and Moments of Random Variables.....	504
8.3.3.3	Uniform Distribution.....	505
8.3.3.4	Normal and Truncated Normal Distribution.....	505
8.3.3.5	Poisson's Distribution.....	506
8.3.3.6	Marginal Distributions.....	506
8.3.4	Conditional Probabilities: Bayes Theorem.....	506
8.3.5	Confidence Intervals and Chebyshev Inequality.....	507
8.3.6	Functions of N Random Variables.....	507
8.3.6.1	General.....	507
8.3.6.2	Taylor Series.....	508
8.3.6.3	Numerical Integration.....	510
8.3.7	Regression and Correlation Analysis.....	510
8.3.7.1	Linear Regression.....	510
8.3.7.2	Correlation Analysis.....	511
8.4	Traditional Theories of Decision Making.....	511
8.4.1	Elements of Traditional Decision Making.....	511
8.4.1.1	Value versus Utility Methods.....	511
8.4.2	Utility Method.....	512
8.4.2.1	Theory of Utility.....	512
8.4.2.2	Types of Utility.....	513
8.4.2.3	Multidimensional Utilities.....	515
8.4.2.4	Expected Utilities.....	515
8.4.3	Cost–Benefit/Value (Monetary) Method.....	516

8.4.4	More on Traditional Decision Making Methods.....	517
8.4.5	Use in SHM.....	518
8.4.6	Decision Tree.....	518
8.4.7	Closing Remarks	518
8.5	Reliability	519
8.5.1	Introduction: Reliability and SHM.....	519
8.5.1.1	Capacity, Demand, and SHM	519
8.5.1.2	Reliability (Safety) Index and SHM	520
8.5.2	Reliability Methods as Applied to SHM.....	521
8.5.2.1	Structural Components	521
8.5.2.2	Structural Systems	521
8.5.2.3	NDT versus SHM Reliability	524
8.5.3	Capacity Monitoring: Avoiding Catastrophic Failure.....	524
8.5.4	Integrated Capacity—Demand Monitoring: Virtual Sensing	529
8.5.5	Separate Capacity—Demand Monitoring.....	532
8.5.5.1	General.....	532
8.5.5.2	Proof Load Testing	532
8.5.5.3	LRFD and LRFR.....	533
8.6	Risk.....	534
8.6.1	Overview	534
8.6.2	Components of Risk Management	534
8.6.2.1	Risk Acceptance	534
8.6.2.2	Risk Assessment	535
8.6.2.3	Risk Treatment.....	535
8.6.2.4	Risk Communication	536
8.6.3	Other Forms of Risk.....	536
8.6.3.1	Relative versus Absolute Risk	536
8.6.3.2	Deterministic versus Probabilistic Risk	536
8.6.4	Evaluation of Risk and Its Components	537
8.6.4.1	General Risk Expression	537
8.6.4.2	Hazards	537
8.6.4.3	Vulnerability	537
8.6.4.4	Cost—Consequences	537
8.6.5	Relative Risk: Prioritization	539
8.6.5.1	General.....	539
8.6.5.2	Failure Mode and Effect Analysis	539
8.6.6	Relative Risk: Matrix Analysis	540
8.6.6.1	Introduction	540
8.6.6.2	Problem Description	541
8.6.7	Absolute Risk: Cost–Benefit	545
8.6.7.1	Introduction	545
8.6.7.2	Problem Description	546
8.6.7.3	Concluding Remarks	552
8.6.8	Absolute Risk: Life Cycle Analysis	554
8.6.8.1	Introduction	554
8.6.8.2	Problem Description	555
8.6.8.3	Concluding Remarks	557
8.7	Stochastic Models.....	559
8.7.1	Markov Processes.....	560
8.7.1.1	Example: Bridge Paint Status	561

8.7.1.2	Use of SHM in Markov Processes: Paint States of a Bridge.....	563
8.7.1.3	Value of SHM for a Markov Process: Paint States	563
8.7.2	Monte Carlo Method	567
8.8	Structural Analysis in Decision Making	568
8.8.1	General	568
8.8.2	Probabilistic Finite/Boundary Element Methods.....	570
8.8.2.1	Theoretical Background	570
8.8.2.2	Example	571
8.9	Financial Considerations	572
8.9.1	Introduction	572
8.9.2	Present Value.....	573
8.9.2.1	Example I: Present Value in Decision Making.....	573
8.9.3	Future Value	573
8.9.3.1	Example II: Future Value in Decision Making	573
8.9.4	Considerations of Uncertainties	574
8.9.4.1	Example I, Continued: Present Value and Uncertainties.....	574
8.9.4.2	Example II, Continued: Future Value and Uncertainties.....	575
8.9.5	Life Cycle Costs/Benefits and Life Span	576
8.9.6	Peer Review	576
8.10	Appendix: Tables for Computing Cost of Bridge Failure.....	577
	References	581
Appendix	Unit Conversion	583
