Preface.....	xxiii
Acknowledgments.....	xxvii
Authors.....	xxix

Chapter 1	Scour.....	1
1.1	Introduction	1
1.1.1	Floods and Scour.....	1
1.1.2	Special Nature of Scour	1
1.1.3	This Chapter	1
1.2	Types and Causes of Scour.....	2
1.2.1	Scales of Scour Effects.....	2
1.2.2	Material Response to Scour: Chemical Gel versus Physical Gel.....	5
1.2.3	Local Scour at Piers or Abutments	6
1.2.4	Scour from Pressure Flow	6
1.2.5	Contraction Scour.....	8
1.2.6	Aggradations and Degradation.....	8
1.2.7	Shifting of Stream	9
1.3	Scour Mitigation Measures.....	9
1.3.1	Mitigation of Scour: General.....	9
1.3.1.1	Reducing Risk versus Enhancing Safety	10
1.3.2	Improvements of Soil Conditions.....	11
1.3.3	Structural Improvements.....	12
1.3.4	Site Improvements.....	12
1.3.5	SHM and Scour Mitigation Measures.....	15
1.3.5.1	General Rules	15
1.3.5.2	Capacity/Demand Monitoring	16
1.3.5.3	Existing versus New Bridges	17
1.4	Bridge Health and Scour	17
1.4.1	Inspecting a Bridge for Scour.....	17
1.4.1.1	General.....	17
1.4.1.2	HEC-8.....	18
1.4.1.3	New York State Evaluation Methods.....	19
1.4.1.4	NDE Scour Evaluation in the California Bridges.....	21
1.4.2	Scour Sensing	21
1.4.2.1	Overview of Sensing.....	21
1.4.2.2	Portable Sensors.....	22
1.4.2.3	Fixed Sensors.....	24
1.4.2.4	Virtual Sensing Paradigm and Scour Monitoring	24
1.4.2.5	Impact Hammer and Borehole Seismic Sensing	25
1.4.2.6	Time Domain Reflectometry	27
1.4.2.7	Closing Remarks.....	29
1.4.3	Structural Identification.....	29
1.4.3.1	Conventional STRID Methods	29
1.4.3.2	System Stability	30
1.4.4	Damage Detection	31

- 1.4.4.1 General..... 31
 - 1.4.4.2 Contraction Scour..... 31
 - 1.4.4.3 Local Scour Piers..... 32
 - 1.4.4.4 Local Scour Abutments..... 32
 - 1.4.4.5 Other Empirical Formulations..... 33
 - 1.4.5 Brittle Behavior Technique..... 33
 - 1.4.5.1 General..... 33
 - 1.4.5.2 Critical Stability Condition..... 34
 - 1.4.5.3 Lateral Load Capacity..... 36
 - 1.4.5.4 Interaction Equation..... 37
 - 1.4.5.5 Unified Approach..... 40
 - 1.4.5.6 Closing Remarks and the Role of SHM..... 40
 - 1.5 Case Studies..... 41
 - 1.5.1 Pneumatic Scour Detection System..... 41
 - 1.5.2 Scour and STRID Methodologies..... 41
 - 1.5.3 Scour Monitoring by Fixed Sonar..... 44
 - 1.5.4 Scour Detection by Moving Sonar..... 47
 - 1.6 Bridge Life Cycle Analysis and Scour Effects..... 49
 - 1.6.1 NCHRP Methods..... 49
 - 1.6.2 Generalized Scour Bridge Life Cycle Analysis..... 50
 - 1.6.2.1 Gradual Scour..... 50
 - 1.6.2.2 Brittle Fracture-Like Scour..... 52
 - 1.6.2.3 Fatigue-Like Scour..... 52
 - 1.6.2.4 Closing Remarks..... 52
 - 1.7 Decision Making and SCOUR..... 52
 - 1.7.1 Decision Making Case Study: To Retrofit or Not to Retrofit?..... 52
 - 1.7.1.1 Decision Based on Prior Information..... 52
 - 1.7.1.2 Refining the Decision: Posterior Probability..... 55
 - 1.7.2 Decision Making Case Study: Risk-Based Method..... 58
 - 1.8 Management Strategies for Scour Hazard..... 59
 - 1.8.1 General..... 59
 - 1.8.2 Gradual (Ductile) Effects..... 59
 - 1.8.3 Sudden (Brittle Fracture-Like) Effects..... 59
 - 1.8.4 Sudden (Fatigue-Like) Effects..... 60
 - 1.8.5 Application to Other Hazards..... 62
 - 1.9 Appendix: NBI System..... 62
- References..... 66

- Chapter 2 Earthquakes..... 69**
 - 2.1 Introduction..... 69
 - 2.1.1 Overview..... 69
 - 2.1.2 Categorizations of Earthquake Issues..... 69
 - 2.1.2.1 General..... 69
 - 2.1.2.2 Phases..... 69
 - 2.1.2.3 Modes..... 70
 - 2.1.2.4 Goals..... 71
 - 2.1.3 Organization of This Chapter..... 71
 - 2.2 Bridge Components and Seismic Hazards..... 71
 - 2.2.1 General..... 71
 - 2.2.2 Overall Geometry..... 72

2.2.3	Bearings.....	73
2.2.4	Expansion/Moving Joints.....	75
2.2.5	Piers: Columns and Bents	77
2.2.6	Abutments	78
2.2.7	Foundations and Soil Conditions	79
2.2.8	Shear Keys.....	79
2.2.9	Superstructure	79
2.3	SHM Components and Seismic Hazards	80
2.3.1	General	80
2.3.1.1	Seismic Monitoring Philosophies.....	80
2.3.1.2	Monitoring Temporal Phases.....	80
2.3.1.3	Monitoring Spatial Categories.....	80
2.3.2	Visual Inspection and Earthquake Hazard	81
2.3.3	Sensors and Instrumentation	81
2.3.3.1	General.....	81
2.3.3.2	Optimum Sensor Locations—Multihazard Approach	82
2.3.3.3	Principle of Sensor Interactions.....	82
2.3.4	Structural Identification/Modeling.....	84
2.3.4.1	General.....	84
2.3.4.2	Seismic Testing.....	84
2.3.4.3	Parameter Identification.....	89
2.3.4.4	Neural Network and Structural Identification	91
2.3.4.5	Nonvertically Propagating Waves.....	92
2.3.5	Damage Detection	102
2.3.5.1	DMID Methods	102
2.3.5.2	Signal Processing.....	103
2.3.5.3	Damage Types: Vulnerabilities, Mitigation, and SHM	103
2.4	Case Studies.....	105
2.4.1	General	105
2.4.2	Laser Vibrometer during and after Seismic Events	106
2.4.3	After Seismic Event Detection by Acoustic Emission	107
2.4.4	Bill Emerson Memorial Bridge.....	108
2.4.5	Vincent Thomas Bridge	111
2.5	Decision Making and Earthquake Hazard	112
2.5.1	General	112
2.5.2	Example: Seismic Vulnerability Rating	112
2.5.3	Before-Event Decision Making Case Study: Damage Trends	113
2.5.3.1	Overview.....	113
2.5.3.2	When Does a Change Occur?.....	115
2.5.4	During- and Immediately After-Event Decision Making Case Study: Risk Management	116
2.5.4.1	Overview.....	116
2.5.4.2	Performance Levels	116
2.5.5	After-Event Decision Making Case Study: Prioritization of Retrofits within Bridge Network	119
2.6	General Engineering Paradigms, Earthquakes, and Structural Health.....	125
2.6.1	General	125
2.6.2	Methods of Risk-Based Earthquake Assessments of Bridges.....	126
2.6.2.1	Caltrans.....	126
2.6.2.2	NYSDOT	126
2.6.2.3	Optimization Technique	128

2.6.3	Performance-Based Design	130
2.6.3.1	Role of SHM	131
2.7	Resilience of Infrastructures	131
2.7.1	Overview	131
2.7.2	Resiliency of Bridges	131
2.7.3	Components of Resiliency.....	133
2.7.4	Seismic Resiliency of a Single Bridge	134
2.7.4.1	Method.....	134
2.7.4.2	Initial Damage State	135
2.7.4.3	Temporal Characteristics of QIF	135
2.7.4.4	Role of SHM	137
2.7.4.5	Closing Remarks.....	138
2.7.5	Resiliency and LCA	138
2.7.6	Resiliency and Risk.....	138
2.7.7	Uncertainty of Resiliency.....	139
2.8	LCA and Earthquake Hazards	140
2.8.1	Bridge Life Cycle Cost Analysis (BLCCA): Cost	142
2.8.1.1	Methods for Seismic BLCCA.....	142
2.8.1.2	Fragility Computations and SHM	142
2.8.2	Bridge Life Cycle Benefit Analysis (BLCBA): Benefits	144
2.8.3	Bridge Life Span Analysis (BLSA): Lifespan.....	144
	References	144

Chapter 3	Corrosion of Reinforced Concrete Structures	147
3.1	Introduction	147
3.1.1	This Chapter	147
3.2	Corrosion: The Problem	147
3.2.1	Causes of Corrosion	147
3.2.1.1	Chloride and Carbonation	147
3.2.1.2	Moisture, Humidity, and Water	148
3.2.1.3	Cracks	148
3.2.1.4	Other Sources	150
3.2.2	Corrosion, Structural Components, and Health Experiments.....	150
3.2.2.1	Reinforced Concrete Columns.....	150
3.2.2.2	Other Structural Components.....	152
3.3	Corrosion Monitoring.....	153
3.3.1	Laboratory Testing	153
3.3.2	Popular Methods of Field Monitoring.....	154
3.3.2.1	Tests and Sensors.....	154
3.3.2.2	NCHRP 558 Procedures	154
3.3.3	SHM Role and Field Monitoring.....	156
3.3.3.1	SHM and Corrosion.....	156
3.3.3.2	SHCE and Corrosion	157
3.3.4	Advanced Monitoring of Corrosion	158
3.3.4.1	Fiber Optic Sensors (FOS).....	159
3.3.4.2	Acoustic Emission and Corrosion Monitoring	159
3.3.4.3	Linear Polarization Resistance	160
3.3.4.4	Smart Pebbles	161

	3.3.4.5	Embedded Combined Type of Measurement (ToM)	161
	3.3.4.6	Laser Surface Measurements	162
3.4		Corrosion Mitigation Methods	164
	3.4.1	General	164
	3.4.2	New Construction	165
	3.4.3	Concrete Replacement/Patching	166
	3.4.4	Concrete Spraying/Encasement	166
	3.4.5	Corrosion Inhibitors	166
	3.4.6	Surface Barriers	166
	3.4.7	Cathodic Protection	166
	3.4.8	Chloride Control	168
3.5		STRID and Corrosion Hazard	168
	3.5.1	General	168
	3.5.2	Local Corrosion STRID	168
	3.5.3	Global Corrosion STRID	170
3.6		Decision Making and Corrosion Hazard	170
	3.6.1	Decision Making: Surface Barriers	170
		3.6.1.1 General	170
		3.6.1.2 Description of the Problem	171
		3.6.1.3 Perfect Information Approach	171
		3.6.1.4 Probabilistic Approach	172
	3.6.2	Decision Making: Cathodic Protection	175
		3.6.2.1 General	175
		3.6.2.2 Utility Functions	176
3.7		Case Studies	181
	3.7.1	SHM of Advanced Bridge and Materials Concepts	181
	3.7.2	Congress Street Bridge	182
3.8		Bridge Life Cycle Analysis and Corrosion Monitoring	183
	3.8.1	General	183
	3.8.2	Extension of Service Life after Corrosion Mitigation	183
	3.8.3	Method and Examples	184
		3.8.3.1 Nonlinear Deterioration Behavior	185
		3.8.3.2 Linear Deterioration Behavior	186
		3.8.3.3 SHM Effects on Corrosion LCCA	187
3.9		Appendix: Chloride Diffusion and Corrosion Initiation	188
		References	189

Chapter 4 Prestressed Concrete Bridges

4.1		Introduction	191
	4.1.1	Challenges	192
	4.1.2	Problem Definition	193
	4.1.3	This Chapter	193
4.2		Anatomy of PSC Bridges	193
	4.2.1	Components of PSC Bridges	193
		4.2.1.1 Tendons	194
		4.2.1.2 Concrete	194
		4.2.1.3 Ducts and Grouts	195
		4.2.1.4 Anchors	195
		4.2.1.5 Others	195

- 4.2.2 Construction Techniques 195
 - 4.2.2.1 Balanced Cantilever 195
 - 4.2.2.2 Span by Span 195
 - 4.2.2.3 Progressive Placing 196
 - 4.2.2.4 Incremental Launching 196
 - 4.2.2.5 SHM and Different Construction Techniques 196
 - 4.2.2.6 Failure during Construction and SHM 197
 - 4.2.2.7 Construction Defects and SHM 199
- 4.2.3 PSC-Specific SHM 199
- 4.3 Damage to PSC Bridges 203
 - 4.3.1 General 203
 - 4.3.2 Corrosion 203
 - 4.3.2.1 Conventional Corrosion 203
 - 4.3.2.2 Stress Corrosion 203
 - 4.3.2.3 Hydrogen Embrittlement 204
 - 4.3.3 Loss of Tendon Force 204
 - 4.3.3.1 Direct Sources 204
 - 4.3.3.2 Indirect Sources 205
 - 4.3.3.3 SHM and Loss of Tendon Force 205
 - 4.3.4 Durability 205
 - 4.3.5 Posttensioning Details 205
 - 4.3.6 Impact 206
 - 4.3.7 Signs of Damage 206
 - 4.3.8 Deterioration of Systems: A Generic Damage? 207
- 4.4 Structural Identification 207
 - 4.4.1 Governing Equations of PT-PS Systems 207
 - 4.4.2 Conventional Structural Modeling of PT-PS Systems 207
 - 4.4.3 STRID Modeling of PT-PS Systems 208
 - 4.4.3.1 Modal Identification 209
 - 4.4.3.2 Parameter Identification 211
 - 4.4.3.3 Neural Networks 211
 - 4.4.4 Load Testing 211
- 4.5 Damage Detection 211
 - 4.5.1 PSC-Specific DMID Attributes 211
 - 4.5.1.1 Use of Dispersion Properties of Tendons 212
 - 4.5.1.2 Detection of Prestressing Force 213
 - 4.5.2 DMID Methods 213
 - 4.5.2.1 Acoustic Emission 213
 - 4.5.2.2 Electromagnetic Detection 214
 - 4.5.2.3 Moisture Level 216
 - 4.5.3 Other Methods 216
 - 4.5.3.1 Penetrating Radiation 216
 - 4.5.3.2 Ground or Surface Penetrating Radar 217
 - 4.5.3.3 Ultrasound 217
 - 4.5.3.4 Impact-Echo 218
 - 4.5.3.5 Static Magnetic Fields 219
 - 4.5.3.6 Multiple Method Testing 219
 - 4.5.3.7 Time Domain Reflectometry 220
 - 4.5.3.8 Other Methods 220
- 4.6 Decision Making 220
 - 4.6.1 Cost of Failure Uncertainty 220

4.7	Case Studies.....	225
4.7.1	Overview	225
4.7.1.1	Impact-Echo in Full-Scale Monitoring.....	225
4.7.2	Case Study: Monitoring Voids in Bonded PTS Systems	230
4.7.3	High-Strength Suspension Cables	231
4.7.4	Thermal Imaging.....	236
4.8	LCA of PT-PS Systems	237
4.8.1	General	237
4.8.2	Life Cycle Cost Analysis (LCCA).....	237
4.8.2.1	Cost of Abnormal Hazards	237
4.8.2.2	Cost of Deterioration	237
4.8.2.3	Cost of Substandard Details	239
4.8.2.4	Total Costs	240
4.8.3	Example.....	241
4.8.4	Considerations of Uncertainties	242
	References	244

Chapter 5	Fatigue	247
5.1	Introduction	247
5.1.1	General.....	247
5.1.2	Overview of Fatigue Detection Methods	247
5.1.3	This Chapter	248
5.2	NDT Treatment of Fatigue	248
5.2.1	Overview of Methods.....	248
5.2.1.1	Identification, Utility, and Prioritization.....	249
5.3	SHM Treatment of Fatigue	250
5.3.1	Overview	250
5.3.2	Factors Affecting Fatigue.....	251
5.3.3	Stress-Cycle Count	252
5.3.3.1	Rainflow: Time Domain	252
5.3.3.2	Rainflow: Frequency Domain.....	253
5.3.4	NDT Applications	254
5.3.4.1	Merrimac Free Ferry	254
5.3.4.2	Welded Railway Bridges.....	255
5.3.4.3	Fatigue and Bridge Rating	256
5.3.4.4	Long-Range Ultrasonic Fatigue Detection	256
5.3.4.5	Remaining Fatigue Life Using Load Tests	257
5.3.4.6	Condition Assessment of Concrete Bridge T-Girders.....	257
5.3.4.7	Paint Sensors.....	258
5.3.4.8	Impact-Echo Testing of Fatigue.....	260
5.3.4.9	Active Crack Growth Detection	260
5.4	Virtual Sensing Paradigm	263
5.4.1	Fatigue and General Sensing.....	263
5.4.2	General Need for Virtual Sensing.....	264
5.4.3	Theoretical Background.....	264
5.4.4	Step-by-Step Guide to VSP	265
5.4.5	Case Studies	265
5.4.5.1	Vibration of Structures	265
5.4.5.2	Acoustic Emissions.....	266

- 5.4.5.3 Deterioration of High-Strength Wires 267
 - 5.4.5.4 Remaining Fatigue Life 269
- 5.5 Step-by-Step Approach for Remaining Fatigue Life..... 269
- 5.6 Dynamic and Fatigue Analysis of a Truss Bridge with
Fiber-Reinforced Polymer Deck 271
- 5.7 Estimating Fatigue Life of Bridge Components Using Measured
Strains: Practical Application..... 276
 - 5.7.1 Introduction 276
 - 5.7.2 Patroon Island Bridge Structure..... 277
 - 5.7.3 Detail Identification..... 278
 - 5.7.4 Field Testing and Analysis 280
 - 5.7.4.1 Analysis 280
 - 5.7.5 Fatigue Life Evaluation 283
 - 5.7.6 Conclusions 284
- 5.8 BLCA and Fatigue..... 284
 - 5.8.1 Overview 284
 - 5.8.2 Bridge Life Cycle Cost Analysis 284
 - 5.8.2.1 Other Models 286
 - 5.8.2.2 SHM Role 286
 - 5.8.3 Bridge Life Benefit Analysis 286
 - 5.8.4 Bridge Lifespan Analysis 286
- 5.9 Dirlik Rainflow Empirical Solution 287
- References 288

Chapter 6 Fiber-Reinforced Polymer Bridge Decks 291

- 6.1 Introduction 291
 - 6.1.1 This Chapter..... 291
- 6.2 The Advent of FRP Bridge Decks..... 291
 - 6.2.1 General 291
 - 6.2.1.1 History of FRP Bridge Decks..... 291
 - 6.2.2 FRP Material Properties 292
 - 6.2.3 Anatomy of an FRP Bridge Deck 293
 - 6.2.3.1 Sandwich Geometry 293
 - 6.2.3.2 Adhesively Bonded Pultruded Geometry..... 295
 - 6.2.3.3 Hybrid Decks 296
 - 6.2.3.4 Joints and Connections 298
 - 6.2.3.5 Wearing Surface 300
 - 6.2.4 Manufacturing Techniques and Problems..... 301
 - 6.2.4.1 Manufacturing Techniques 301
 - 6.2.4.2 Quality Control/Quality Assurance Issues 302
 - 6.2.4.3 Proof Testing: A Case Study..... 305
 - 6.2.5 Issues Related to Structural Health 306
 - 6.2.5.1 General..... 306
 - 6.2.5.2 Structural Issues: Local 306
 - 6.2.5.3 Structural Issues: Global..... 307
 - 6.2.5.4 Performance Issues 313
 - 6.2.6 FHWA Guidelines and SHM 314
- 6.3 Health of FRP Bridge Deck 314
 - 6.3.1 General 314
 - 6.3.1.1 Overview..... 314
 - 6.3.1.2 SHCE and FRP Decks..... 314

6.3.2	Health Issues of FRP Bridge Decks	316
6.3.2.1	General Issues	316
6.3.2.2	Material Issues	319
6.3.2.3	Design	321
6.3.2.4	Manufacturing	322
6.3.2.5	Transportation	323
6.3.2.6	Erection	323
6.3.2.7	Inspection	324
6.3.2.8	Maintenance	324
6.3.3	Repair of FRP Bridge Decks: A Case Study	325
6.3.4	Structural Modeling	326
6.3.4.1	General	326
6.3.4.2	FRP Bridge Deck Properties through Monitoring	326
6.3.4.3	Conventional FE	327
6.3.4.4	Scale Independent Element	328
6.3.5	Damage Detection	329
6.3.5.1	General	329
6.3.5.2	Dispersion Curves	330
6.3.5.3	Monitoring Existing Decks	330
6.3.5.4	Fiber Optic Sensing	331
6.3.5.5	Thermography	331
6.3.5.6	Ultrasound and AE	331
6.3.5.7	Wavelets	332
6.4	Decision Making and FRP Bridge Decks	334
6.4.1	Decision Making	334
6.4.2	Decision Making Case Study: Reliability of Single Sample (Use of NDT Methods)	334
6.4.2.1	Introduction	334
6.4.2.2	High-Quality Manufacturing	335
6.4.2.3	Medium- to Low-Quality Manufacturing	336
6.4.2.4	Evaluate Structural Risk	336
6.4.2.5	Concluding Remarks	336
6.4.3	Lack of QC Values	336
6.4.4	Decision Making Case Study: QC Issue	337
6.4.5	Decision Making Case Study: Continued Monitoring	337
6.4.5.1	General Overview	337
6.4.5.2	When Does a Change Occur?	339
6.4.5.3	Correlation Analysis	339
6.4.5.4	Discussion of Regression and Correlation Results	340
6.5	Case Studies	342
6.5.1	Rte 248—Bennetts Creek Bridge	342
6.5.2	Bentley Creek Bridge	343
6.5.2.1	General	343
6.5.2.2	Dynamic Effects	349
6.5.2.3	Maintenance Issues	355
6.6	LCA for FRP Bridge Decks	357
6.6.1	Principle of New Materials LCA	357
6.6.1.1	Additional Costs of Monitoring	357
6.6.1.2	Costs of Additional Demands	357

6.6.1.3	Advantages of New Material (Additional Benefits)	358
6.6.1.4	Expected Lifespan	359
6.6.2	LCA Model for New Materials	359
References		360

Chapter 7	Fiber-Reinforced Polymers Wrapping.....	363
7.1	Introduction	363
7.1.1	Overview	363
7.1.2	Seismic Retrofits.....	363
7.1.3	This Chapter	364
7.2	Physical and Theoretical Background	366
7.2.1	General	366
7.2.2	Basic Mechanics.....	367
7.2.3	Sources of Damage.....	367
7.2.4	FRP-Wrapping Damage Limit States	370
7.3	NDT Methods for FRP Wrapping	372
7.3.1	General	372
7.3.2	Main NDT Methods for FRP Wrapping	375
7.3.2.1	Visual Inspection	375
7.3.2.2	Sounding	375
7.3.2.3	Thermography	376
7.3.2.4	Microwave Methods	377
7.3.2.5	Acoustic Methods	378
7.3.2.6	Ground Penetrating Radar and Infrared Thermography	379
7.3.3	Other NDT Methods	381
7.4	Applications.....	383
7.4.1	Strengthening	383
7.4.2	Maintenance	384
7.4.3	Seismic Applications.....	386
7.4.3.1	University at Buffalo In-Fill Panels.....	386
7.4.3.2	Woodlawn Viaduct, NY.....	387
7.4.4	Aerodynamic Flow	391
7.4.5	Overhead Sign Structures.....	392
