

# DETERMINISTIC OPERATIONS RESEARCH

*Models and Methods  
in Linear Optimization*

DAVID J. RADER JR.

# CONTENTS

---

<b>PREFACE</b>	<b>xii</b>
<b>1 INTRODUCTION TO OPERATIONS RESEARCH</b>	<b>1</b>
1.1 What is Deterministic Operations Research?	1
1.2 Introduction to Optimization Modeling	5
1.3 Common Classes of Mathematical Programs	13
1.4 About this Book	18
Exercises	19
<b>2 LINEAR PROGRAMMING MODELING</b>	<b>21</b>
2.1 Resource Allocation Models	21
2.2 Work Scheduling Models	25
2.3 Models and Data	28
2.4 Blending Models	30
2.5 Production Process Models	36
2.6 Multiperiod Models: Work Scheduling and Inventory	42
2.7 Linearization of Special Nonlinear Models	46
2.8 Various Forms of Linear Programs	51
2.9 Network Models	56
Exercises	68

<b>8 SOLVING LINEAR PROGRAMS: SIMPLEX METHOD</b>	<b>271</b>
8.1 Simplex Method	271
8.2 Making the Simplex Method More Efficient	285
8.3 Convergence, Degeneracy, and the Simplex Method	289
8.4 Finding an Initial Solution: Two-Phase Method	294
8.5 Bounded Simplex Method	300
8.6 Computational Issues	305
Exercises	308
<b>9 LINEAR PROGRAMMING DUALITY</b>	<b>317</b>
9.1 Motivation: Generating Bounds	317
9.2 Dual Linear Program	321
9.3 Duality Theorems	327
9.4 Another Interpretation of the Simplex Method	333
9.5 Farkas' Lemma Revisited	334
9.6 Economic Interpretation of the Dual	336
9.7 Another Duality Approach: Lagrangian Duality	338
Exercises	344
<b>10 SENSITIVITY ANALYSIS OF LINEAR PROGRAMS</b>	<b>351</b>
10.1 Graphical Sensitivity Analysis	351
10.2 Sensitivity Analysis Calculations	359
10.3 Use of Sensitivity Analysis	368
10.4 Parametric Programming	375
Exercises	380
<b>11 ALGORITHMIC APPLICATIONS OF DUALITY</b>	<b>389</b>
11.1 Dual Simplex Method	389
11.2 Transportation Problem	401
11.3 Column Generation	414
11.4 Dantzig–Wolfe Decomposition	420
11.5 Primal–Dual Interior Point Method	432
Exercises	441
<b>12 NETWORK OPTIMIZATION ALGORITHMS</b>	<b>449</b>
12.1 Introduction to Network Optimization	449
12.2 Shortest Path Problems	449
12.3 Maximum Flow Problems	458
12.4 Minimum Cost Network Flow Problems	470
Exercises	484

<b>13</b>	<b>INTRODUCTION TO INTEGER PROGRAMMING</b>	<b>489</b>
13.1	Basic Definitions and Formulations	490
13.2	Relaxations and Bounds	496
13.3	Preprocessing and Probing	500
13.4	When are Integer Programs “Easy?”	506
	Exercises	511
<b>14</b>	<b>SOLVING INTEGER PROGRAMS: EXACT METHODS</b>	<b>514</b>
14.1	Complete Enumeration	514
14.2	Branch-and-Bound Methods	516
14.3	Valid Inequalities and Cutting Planes	524
14.4	Gomory’s Cutting Plane Algorithm	531
14.5	Valid Inequalities for 0–1 Knapsack Constraints	536
14.6	Branch-and-Cut Algorithms	540
14.7	Computational Issues	547
	Exercises	551
<b>15</b>	<b>SOLVING INTEGER PROGRAMS: MODERN HEURISTIC TECHNIQUES</b>	<b>556</b>
15.1	Review of Local Search Methods: Pros and Cons	556
15.2	Simulated Annealing	558
15.3	Tabu Search	562
15.4	Genetic Algorithms	565
15.5	GRASP Algorithms	570
	Exercises	574
	<b>APPENDIX A BACKGROUND REVIEW</b>	<b>579</b>
A.1	Basic Notation	579
A.2	Graph Theory	581
A.3	Linear Algebra	583
	<b>REFERENCE</b>	<b>597</b>
	<b>INDEX</b>	<b>603</b>
