1. Mechatronic Engineering 1
Study Objectives 1
1.1 Introduction 1
1.2 Mechatronic Systems 2
1.3 Modeling and Design 4
1.4 Mechatronic Design Concept 5
1.4.1 Coupled Design 6
1.4.2 Mechatronic Design Quotient 7
1.4.3 Design Evolution 8
1.5 Evolution of Mechatronics 9
1.6 Application Areas 10
1.7 Study of Mechatronics 11
1.8 Organization of the Book 12
Problems 14
Further Reading 15

2. Basic Elements and Components 17
Study Objectives 17
2.1 Introduction 17
2.2 Mechanical Elements 18
2.2.1 Mass (Inertia) Element 18
2.2.2 Spring (Stiffness) Element 20
2.2.3 Damping (Dissipation) Element 21
2.3 Fluid Elements 21
2.3.1 Fluid Capacitor or Accumulator (*A*-Type Element) 22
2.3.2 Fluid Inertor (*T*-Type Element) 22
2.3.3 Fluid Resistor (*D*-Type Element) 22
2.3.4 Derivation of Constitutive Equations 22
2.3.4.1 Fluid Capacitor 23
2.3.4.2 Fluid Inertor 26
2.3.4.3 Fluid Resistor 27
2.4 Thermal Elements 27
2.4.1 Thermal Capacitor 28
2.4.2 Thermal Resistor 28
2.4.2.1 Conduction 29
2.4.2.2 Convection 30
2.4.2.3 Radiation 30

2.4.3 Three-Dimensional Conduction 31
2.4.4 Biot Number 32
2.5 Mechanical Components 32
2.5.1 Transmission Components 33
2.5.2 Lead Screw and Nut 35
2.5.3 Harmonic Drives 38
2.6 Passive Electrical Elements and Materials 43
2.6.1 Resistor (Dissipation) Element 43
2.6.1.1 Conductance and Resistance 44
2.6.1.2 *Resistivity* 44
2.6.1.3 Effect of Temperature on Resistance 45
2.6.1.4 Effect of Strain on Resistance 46
2.6.1.5 Superconductivity 47
2.6.1.6 Color Code for Fixed Resistors 48
2.6.2 Dielectric Material and Capacitor Element 49
2.6.2.1 Permittivity 51
2.6.2.2 Capacitor Types 52
2.6.2.3 Color Code for Fixed Capacitors 52
2.6.2.4 Piezoelectricity 52
2.6.3 Magnetic Material and Inductor Element 55
2.6.3.1 Magnetism and Permeability 55
2.6.3.2 Hysteresis Loop 55
2.6.3.3 Magnetic Materials 55
2.6.3.4 Piezomagnetism 57
2.6.3.5 Hall-Effect Sensors 57
2.6.3.6 Magnetic Bubble Memories 58
2.6.3.7 Reluctance 58
2.6.3.8 Inductance 59
2.7 Active Electronic Components 60
2.7.1 Diodes 60
2.7.1.1 PN Junctions 60
2.7.1.2 Semiconductors 60
2.7.1.3 Depletion Region 61
2.7.1.4 Biasing 61
2.7.1.5 Zener Diodes 63
2.7.1.6 VVC Diodes 64
2.7.1.7 Tunnel Diodes 64
2.7.1.8 PIN Diodes 65
2.7.1.9 Schottky Barrier Diodes 65
2.7.1.10 Thyristors 65
2.7.2 Transistors 67
2.7.2.1 Bipolar Junction Transistors 67
2.7.2.2 Field-Effect Transistors 69
2.7.2.3 The MOSFET 70
2.7.2.4 The Junction Field Effect Transistor 71
2.8 Light Emitters and Displays 74
2.8.1 Light-Emitting Diodes 75
2.8.2 Lasers 76

2.8.3 Liquid Crystal Displays 78
2.8.4 Plasma Displays 79
2.9 Light Sensors 79
2.9.1 Photoresistors 80
2.9.2 Photodiodes 80
2.9.3 Phototransistor 81
2.9.4 Photo-Field Effect Transistor 81
2.9.5 Photocells 82
2.9.6 Charge-Coupled Device 82
2.9.7 Applications of Optically Coupled Devices 83
Problems 84

3. Modeling of Mechatronic Systems 91
Study Objectives 91
3.1 Introduction 91
3.2 Dynamic Systems and Models 92
3.2.1 Terminology 92
3.2.2 Dynamic Models 93
3.2.2.1 Model Complexity 93
3.2.2.2 Model Types 93
3.2.2.3 Types of Analytical Models 94
3.2.2.4 Principle of Superposition 95
3.2.3 Lumped Model of a Distributed System 95
3.2.3.1 Heavy Spring 96
3.3 Lumped Elements and Analogies 98
3.3.1 Across Variables and through Variables 99
3.3.2 Natural Oscillations 100
3.4 Analytical Model Development 100
3.4.1 Steps of Model Development 101
3.4.2 Input–Output Models 102
3.4.3 State-Space Models 102
3.4.3.1 Linear State Equations 102
3.5 Model Linearization 111
3.5.1 Linearization about an Operating Point 111
3.5.2 Function of Two Variables 113
3.5.3 Reduction of System Nonlinearities 114
3.5.4 Linearization Using Experimental Operating Curves 120
3.5.4.1 Torque–Speed Curves of Motors 120
3.5.4.2 Linear Models for Motor Control 120
3.6 Linear Graphs 122
3.6.1 Variables and Sign Convention 123
3.6.1.1 Sign Convention 123
3.6.2 Linear Graph Elements 125
3.6.2.1 Single-Port Elements 125
3.6.2.2 Two-Port Elements 127
3.6.3 Linear Graph Equations 131
3.6.3.1 Compatibility (Loop) Equations 131
3.6.3.2 Continuity (Node) Equations 132

3.6.4 State Models from Linear Graphs 132
3.6.4.1 System Order 133
3.6.4.2 Sign Convention 133
3.6.4.3 General Observation 134
3.6.4.4 Linear Graph Representation 140
3.6.5 Linear Graphs of Thermal Systems 146
3.7 Transfer Functions and Frequency-Domain Models 148
3.7.1 Transfer Function 149
3.7.2 Frequency-Domain Models 150
3.7.2.1 Frequency Transfer Function (Frequency Response Function) 150
3.7.2.2 Bode Diagram (Bode Plot) and Nyquist Diagram 152
3.7.3 Transfer Functions of Electromechanical Systems 153
3.7.3.1 Mechanical Transfer Functions 154
3.7.3.2 Transfer Functions of Basic Elements 156
3.8 Equivalent Circuits and Linear Graph Reduction 158
3.8.1 Thevenin's Theorem for Electrical Circuits 159
3.8.2 Mechanical Circuit Analysis Using Linear Graphs 162
3.9 Block Diagrams 169
3.9.1 Simulation Block Diagrams 171
3.9.2 Principle of Superposition 172
3.9.3 Causality and Physical Realizability 172
3.10 Response Analysis 173
3.10.1 Analytical Solution 173
3.10.1.1 Homogeneous Solution 173
3.10.1.2 Particular Solution 174
3.10.1.3 *Convolution Integral* 174
3.10.1.4 Stability 175
3.10.2 First-Order Systems 175
3.10.3 Second-Order Systems 176
3.10.3.1 Free Response of Undamped Oscillator 176
3.10.3.2 Free Response of Damped Oscillator 177
3.10.3.3 Forced Response of Damped Oscillator 177
3.10.4 Response Using Laplace Transform 180
3.10.4.1 Step Response Using Laplace Transforms 180
3.10.4.2 Incorporation of Initial Conditions 181
3.10.4.3 Step Response of a First-Order System 182
3.10.5 Determination of Initial Conditions for Step Response 182
3.11 Computer Simulation 186
3.11.1 Use of Simulink® in Computer Simulation 187
3.11.1.1 Starting Simulink® 188
3.11.1.2 Basic Elements 188
3.11.1.3 Building an Application 189
3.11.1.4 Running a Simulation 189
Problems 193

4. Component Interconnection and Signal Conditioning 229
Study Objectives 229
4.1 Introduction 229

4.2 Impedance Characteristics 230
4.2.1 Cascade Connection of Devices 231
4.2.1.1 Output Impedance 231
4.2.1.2 Input Impedance 231
4.2.1.3 Cascade Connection 232
4.2.2 Impedance Matching 234
4.2.3 Impedance Matching in Mechanical Systems 235
4.3 Amplifiers 237
4.3.1 Operational Amplifier 238
4.3.1.1 Use of Feedback in Op-Amps 241
4.3.2 Voltage and Current Amplifiers 242
4.3.3 Instrumentation Amplifiers 243
4.3.3.1 Differential Amplifier 243
4.3.3.2 Common Mode 245
4.3.4 Amplifier Performance Ratings 246
4.3.4.1 Common-Mode Rejection Ratio 247
4.3.4.2 AC-Coupled Amplifiers 249
4.3.5 Ground Loop Noise 249
4.4 Filters 251
4.4.1 Passive Filters and Active Filters 252
4.4.1.1 Number of Poles 253
4.4.2 Low-Pass Filters 253
4.4.2.1 Low-Pass Butterworth Filter 254
4.4.3 High-Pass Filters 255
4.4.4 Band-Pass Filters 256
4.4.4.1 Resonance-Type Band-Pass Filters 257
4.4.4.2 Band-Reject Filters 257
4.4.5 Digital Filters 258
4.4.5.1 Software and Hardware Implementations 259
4.5 Modulators and Demodulators 260
4.5.1 Amplitude Modulation 262
4.5.1.1 Modulation Theorem 263
4.5.1.2 Side Frequencies and Side Bands 263
4.5.2 Application of Amplitude Modulation 264
4.5.2.1 Fault Detection and Diagnosis 266
4.5.3 Demodulation 267
4.6 Analog-to-Digital Conversion 267
4.6.1 Digital-to-Analog Conversion 270
4.6.1.1 Weighted Resistor DAC 271
4.6.1.2 Ladder DAC 272
4.6.1.3 DAC Error Sources 274
4.6.2 Analog-to-Digital Conversion 276
4.6.2.1 Successive Approximation ADC 276
4.6.2.2 Dual Slope ADC 278
4.6.2.3 Counter ADC 280
4.6.2.4 ADC Performance Characteristics 281
4.6.3 Sample-and-Hold Circuitry 284
4.6.4 Multiplexers 285
4.7 Bridge Circuits 286

4.7.1 Wheatstone Bridge 286
4.7.2 Constant-Current Bridge 288
4.7.3 Hardware Linearization of Bridge Outputs 290
4.7.4 Bridge Amplifiers 290
4.7.5 Half-Bridge Circuits 290
4.7.6 Impedance Bridges 291
4.7.6.1 Owen Bridge 292
4.7.6.2 Wien-Bridge Oscillator 293
Problems 293

5. Instrument Ratings and Error Analysis 303
Study Objectives 303
5.1 Introduction 303
5.1.1 Parameters for Performance Specification 304
5.1.2 Perfect Measurement Device 304
5.2 Linearity 304
5.2.1 Saturation 305
5.2.2 Dead Zone 306
5.2.3 Hysteresis 306
5.2.4 The Jump Phenomenon 306
5.2.5 Limit Cycles 306
5.2.6 Frequency Creation 307
5.3 Instrument Ratings 307
5.3.1 Rating Parameters 308
5.4 Bandwidth 310
5.4.1 Transmission Level of a Band-Pass Filter 311
5.4.2 Effective Noise Bandwidth 311
5.4.3 Half-Power (or 3 dB) Bandwidth 311
5.4.4 Fourier Analysis Bandwidth 312
5.4.5 Useful Frequency Range 312
5.4.6 Instrument Bandwidth 313
5.4.7 Control Bandwidth 313
5.4.8 Static Gain 313
5.5 Signal Sampling and Aliasing Distortion 314
5.5.1 Sampling Theorem 314
5.5.2 Anti-Aliasing Filter 315
5.5.3 Another Illustration of Aliasing 317
5.6 Bandwidth Design of a Control System 320
5.6.1 Comment about Control Cycle Time 320
5.7 Instrument Error Analysis 320
5.7.1 Statistical Representation 322
5.7.2 Accuracy and Precision 322
5.7.3 Error Combination 323
5.7.4 Absolute Error 325
5.7.5 SRSS Error 325
5.8 Statistical Process Control 328
5.8.1 Control Limits or Action Lines 329
5.8.2 Steps of SPC 329
Problems 330

6. Sensors and Transducers 341
Study Objectives 341
6.1 Introduction 341
6.1.1 Terminology 342
6.1.2 Motion Sensors and Transducers 344
6.2 Potentiometer 345
6.2.1 Performance Considerations 346
6.2.2 Optical Potentiometer 348
6.3 Variable-Inductance Transducers 350
6.3.1 Mutual-Induction Transducers 350
6.3.2 Linear-Variable Differential Transformer 351
6.3.2.1 Phase Shift and Null Voltage 353
6.3.2.2 Signal Conditioning 353
6.3.3 Resolver 357
6.3.3.1 Demodulation 358
6.3.4 Self-Induction Transducers 359
6.3.5 Eddy Current Transducers 360
6.3.6 Permanent-Magnet Tachometers 362
6.3.7 DC Tachometer 362
6.3.7.1 Electronic Commutation 363
6.3.7.2 Loading Considerations 363
6.3.8 Permanent-Magnet AC Tachometer 364
6.3.9 AC Induction Tachometer 364
6.4 Variable-Capacitance Transducers 365
6.4.1 Capacitive Rotation Sensor 366
6.4.2 Capacitive Displacement Sensor 367
6.4.3 Capacitance Bridge Circuit 368
6.5 Piezoelectric Sensors 369
6.5.1 Sensitivity 370
6.5.2 Types of Accelerometers 371
6.5.3 Piezoelectric Accelerometer 372
6.5.4 Charge Amplifier 374
6.6 Strain Gages 376
6.6.1 Equations for Strain Gage Measurements 376
6.6.1.1 Bridge Sensitivity 379
6.6.1.2 The Bridge Constant 379
6.6.1.3 Calibration Constant 380
6.6.1.4 Data Acquisition 381
6.6.1.5 Accuracy Considerations 381
6.6.2 Semiconductor Strain Gages 382
6.7 Torque Sensors 385
6.7.1 Strain Gage Torque Sensors 386
6.7.2 Force Sensors 390
6.8 Tactile Sensing 391
6.8.1 Tactile Sensor Requirements 391
6.8.2 Construction and Operation of Tactile Sensors 394
6.8.3 Optical Tactile Sensors 396
6.8.4 Piezoresistive Tactile Sensors 398
6.8.5 Dexterity 398

6.9 Gyroscopic Sensors 398
6.9.1 Rate Gyro 399
6.9.2 Coriolis Force Devices 400
6.10 Optical Sensors and Lasers 400
6.10.1 Fiber-Optic Position Sensor 401
6.10.2 Laser Interferometer 402
6.10.3 Fiber-Optic Gyroscope 403
6.10.4 Laser Doppler Interferometer 404
6.11 Ultrasonic Sensors 405
6.11.1 Magnetostrictive Displacement Sensors 407
6.12 Thermo-Fluid Sensors 407
6.12.1 Pressure Sensors 408
6.12.2 Flow Sensors 409
6.12.3 Temperature Sensors 412
6.12.3.1 Thermocouple 412
6.12.3.2 Resistance Temperature Detector 413
6.12.3.3 Thermistor 413
6.12.3.4 Bimetal Strip Thermometer 413
6.13 Digital Transducers 414
6.13.1 Advantages of Digital Transducers 415
6.13.2 Shaft Encoders 415
6.13.2.1 Encoder Types 415
6.13.3 Incremental Optical Encoder 416
6.13.3.1 Direction of Rotation 419
6.13.3.2 Hardware Features 419
6.13.3.3 Displacement Measurement 421
6.13.3.4 Digital Resolution 421
6.13.3.5 Physical Resolution 422
6.13.3.6 Step-Up Gearing 422
6.13.3.7 Interpolation 423
6.13.3.8 Velocity Measurement 424
6.13.3.9 Velocity Resolution 424
6.13.3.10 Step-Up Gearing 427
6.13.3.11 Data Acquisition Hardware 428
6.13.4 Absolute Optical Encoders 429
6.13.4.1 Gray Coding 430
6.13.4.2 Code Conversion Logic 431
6.13.4.3 Advantages and Drawbacks 432
6.13.5 Encoder Error 432
6.13.5.1 Eccentricity Error 433
6.14 Miscellaneous Digital Transducers 434
6.14.1 Digital Resolvers 434
6.14.2 Digital Tachometers 435
6.14.3 Hall-Effect Sensors 436
6.14.4 Linear Encoders 438
6.14.5 Moiré Fringe Displacement Sensors 439
6.14.6 Binary Transducers 441
6.14.7 Other Types of Sensors 444

6.15 Image Sensors 444
6.15.1 Image Processing and Computer Vision 444
6.15.2 Image-Based Sensory System 445
6.15.2.1 Camera 445
6.15.2.2 Image Frame Acquisition 445
6.15.2.3 Color Images 446
6.15.3 Image Processing 446
6.15.4 Some Applications 447
Problems 447

7. Actuators 465
Study Objectives 465
7.1 Introduction 465
7.2 Stepper Motors 466
7.2.1 Stepper Motor Classification 466
7.2.2 Hybrid Stepper Motor 467
7.2.3 Microstepping 469
7.2.4 Driver and Controller 470
7.2.5 Driver Hardware 472
7.2.6 Stepper Motor Selection 474
7.2.6.1 Torque Characteristics and Terminology 474
7.2.6.2 Stepper Motor Selection Process 476
7.2.6.3 Positioning (x–y) Tables 478
7.2.7 Stepper Motor Applications 484
7.3 DC Motors 486
7.3.1 Rotor and Stator 487
7.3.2 Commutation 488
7.3.3 Brushless DC Motors 489
7.3.4 DC Motor Equations 489
7.3.4.1 Steady-State Characteristics 491
7.3.5 Experimental Model for DC Motor 492
7.3.5.1 Electrical Damping Constant 492
7.3.5.2 Linearized Experimental Model 493
7.3.6 Control of DC Motors 494
7.3.6.1 Armature Control 494
7.3.6.2 Motor Time Constants 495
7.3.6.3 Field Control 496
7.3.7 Feedback Control of DC Motors 498
7.3.7.1 Velocity Feedback Control 498
7.3.7.2 Position Plus Velocity Feedback Control 498
7.3.7.3 Position Feedback with PID Control 499
7.3.8 Motor Driver 500
7.3.8.1 Interface Board 500
7.3.8.2 Drive Unit 501
7.3.9 DC Motor Selection 504
7.3.9.1 Motor Data and Specifications 504
7.3.9.2 Selection Considerations 505

7.3.9.3 Motor Sizing Procedure 506
7.3.9.4 Inertia Matching 507
7.3.9.5 Drive Amplifier Selection 508
7.4 Induction Motors 510
7.4.1 Rotating Magnetic Field 511
7.4.2 Induction Motor Characteristics 512
7.4.3 Torque–Speed Relationship 514
7.4.4 Induction Motor Control 518
7.4.4.1 Excitation Frequency Control 518
7.4.4.2 Voltage Control 520
7.4.4.3 Field Feedback Control (Flux Vector Drive) 523
7.4.5 A Transfer-Function Model for an Induction Motor 523
7.4.6 Single-Phase AC Motors 525
7.5 Miscellaneous Actuators 526
7.5.1 Synchronous Motors 526
7.5.1.1 Control of a Synchronous Motor 527
7.5.2 Linear Actuators 527
7.5.2.1 Solenoid 527
7.5.2.2 Linear Motors 529
7.6 Hydraulic Actuators 530
7.6.1 Components of a Hydraulic Control System 531
7.6.2 Hydraulic Pumps and Motors 532
7.6.3 Hydraulic Valves 535
7.6.3.1 Spool Valve 536
7.6.3.2 Steady-State Valve Characteristics 538
7.6.4 Hydraulic Primary Actuators 541
7.6.5 The Load Equation 542
7.6.6 Hydraulic Control Systems 543
7.6.6.1 Feedback Control 549
7.6.7 Constant-Flow Systems 552
7.6.8 Pump-Controlled Hydraulic Actuators 553
7.6.9 Hydraulic Accumulators 553
7.6.10 Pneumatic Control Systems 554
7.6.10.1 Flapper Valves 554
7.6.11 Hydraulic Circuits 557
Problems 558

8. Digital Hardware and Microcontrollers 579
Study Objectives 579
8.1 Introduction 579
8.2 Number Systems and Codes 580
8.2.1 Binary Representation 580
8.2.2 Negative Numbers 582
8.2.2.1 Signed Magnitude Representation 582
8.2.2.2 Two's Complement Representation 582
8.2.2.3 One's Complement 583
8.2.3 Binary Multiplication and Division 583
8.2.4 Binary Gray Codes 583

8.2.5 Binary Coded Decimal 584
8.2.6 ASCII (Askey) Code 584
8.3 Logic and Boolean Algebra 585
8.3.1 Logic 585
8.3.1.1 Negation 585
8.3.1.2 Disjunction 585
8.3.1.3 Conjunction 585
8.3.1.4 Implication 586
8.3.2 Boolean Algebra 587
8.3.2.1 Sum and Product Forms 588
8.4 Combinational Logic Circuits 588
8.4.1 Logic Gates 588
8.4.2 IC Logic Families 591
8.4.3 Design of Logic Circuits 592
8.4.3.1 Multiplexer Circuit 593
8.4.3.2 Adder Circuits 593
8.4.3.3 Active-Low Signals 594
8.4.4 Minimal Realization 596
8.4.4.1 Karnaugh Map Method 596
8.5 Sequential Logic Devices 598
8.5.1 RS Flip-Flop 599
8.5.2 Latch 600
8.5.3 JK Flip-Flop 600
8.5.4 D Flip-Flop 602
8.5.4.1 Shift Register 602
8.5.5 T Flip-Flop and Counters 603
8.5.6 Schmitt Trigger 606
8.6 Practical Considerations of IC Chips 607
8.6.1 IC Chip Production 607
8.6.2 Chip Packaging 608
8.6.3 Applications 609
8.7 Microcontrollers 609
8.7.1 Microcontroller Architecture 609
8.7.1.1 Microcontroller Operation 610
8.7.2 Microprocessor 611
8.7.2.1 Arithmetic Logic Unit 611
8.7.2.2 Program Counter 612
8.7.2.3 Address Register 612
8.7.2.4 Accumulator and Data Register 613
8.7.2.5 Instruction Register 613
8.7.2.6 Operation Decoder 613
8.7.2.7 Sequencer 613
8.7.3 Memory 613
8.7.3.1 RAM, ROM, PROM, EPROM, and EEPROM 613
8.7.3.2 Bits, Bytes, and Words 614
8.7.3.3 Volatile Memory 614
8.7.3.4 Physical Form of Memory 614
8.7.3.5 Memory Access 615
8.7.3.6 Memory Card Design 617

8.7.4 Input/Output Hardware 619
8.7.4.1 Microcontroller Pin-Out 620
8.7.4.2 Programmed I/O 620
8.7.4.3 Interrupt I/O 622
8.7.4.4 Direct Memory Access Method 622
8.7.4.5 Handshaking Operation 623
8.7.4.6 Clock, Counter, and Timer 623
8.7.5 Microcontroller Programming and Program Execution 624
8.7.5.1 Instruction Set, Operation Codes, and Mnemonics 624
8.7.5.2 Programming and Languages 624
8.7.5.3 Program Execution 625
8.7.5.4 Real-Time Processing 626
8.7.6 Development of Microcontroller Applications 627
Problems 628

9. Control Systems 637
Study Objectives 637
9.1 Introduction 637
9.2 Control System Structure 638
9.2.1 Feedback and Feedforward Control 638
9.2.2 Programmable Logic Controllers 640
9.2.2.1 PLC Hardware 641
9.2.3 Distributed Control 642
9.2.3.1 Hierarchical Control 643
9.3 Control System Performance 644
9.3.1 Performance Specification in Time Domain 645
9.3.1.1 Simple Oscillator Model 647
9.4 Control Schemes 649
9.4.1 Feedback Control with PID Action 651
9.4.1.1 System Type and Error Constants 654
9.4.2 Performance Specification Using *s*-Plane 655
9.5 Stability 656
9.5.1 Routh–Hurwitz Criterion 657
9.5.1.1 Routh Array 658
9.5.1.2 Auxiliary Equation (Zero-Row Problem) 659
9.5.1.3 Zero Coefficient Problem 660
9.5.1.4 Relative Stability 661
9.5.2 Root Locus Method 662
9.5.2.1 Root Locus Rules 664
9.5.2.2 Steps of Sketching Root Locus 665
9.5.3 Stability in the Frequency Domain 668
9.5.3.1 Marginal Stability 668
9.5.3.2 The 1, 0 Condition 668
9.5.3.3 Phase Margin and Gain Margin 670
9.5.3.4 Bode and Nyquist Plots 671
9.6 Advanced Control 672
9.6.1 Linear Quadratic Regulator Control 673
9.6.2 Modal Control 674

9.6.3 *Nonlinear Feedback Control* 675
9.6.4 Adaptive Control 676
9.6.5 Sliding Mode Control 678
9.6.6 Linear Quadratic Gaussian Control 680
9.6.7 H_∞ (*H*-Infinity) Control 682
9.7 Fuzzy Logic Control 683
9.7.1 Fuzzy Logic 683
9.7.2 Fuzzy Sets and Membership Functions 684
9.7.3 Fuzzy Logic Operations 685
9.7.3.1 Complement (Negation, NOT) 685
9.7.3.2 Union (Disjunction, OR) 686
9.7.3.3 Intersection (Conjunction, AND) 686
9.7.3.4 Implication (If-Then) 686
9.7.4 Compositional Rule of Inference 687
9.7.4.1 Extensions to Fuzzy Decision Making 688
9.7.5 Basics of Fuzzy Control 689
9.7.6 Fuzzy Control Surface 693
9.8 Digital Control 694
9.8.1 Computer Control Systems 696
9.8.2 Components of a Digital Control System 696
9.8.3 Advantages of Digital Control 697
9.8.4 Computer Implementation 698
Problems 699

10. Case Studies in Mechatronics 713
Study Objectives 713
10.1 Introduction 713
10.2 Engineering Design 713
10.2.1 Engineering Design as an Optimization Problem 714
10.2.2 Useful Terminology 716
10.2.3 Design Projects 717
10.2.4 Quality Function Deployment 718
10.2.5 Design Report 718
10.2.6 Design of a Mechatronic System 720
10.3 Robotics Case Study 720
10.3.1 General Considerations 720
10.3.2 Robot Selection 722
10.3.2.1 Commercial Robots 723
10.3.3 Robotic Workcells 725
10.3.4 Robot Design and Development 727
10.3.4.1 Prototype Robot 727
10.3.4.2 Robot Design 728
10.3.4.3 Actuator Selection/Sizing *729*
10.3.4.4 Final Design 731
10.3.4.5 Amplifiers and Power Supplies 733
10.3.4.6 Control System 734
10.3.4.7 Economic Analysis 736

10.4 Iron Butcher Case Study 737
10.4.1 Technology Needs 737
10.4.2 Final Design 738
10.4.3 Control System Architecture 740
10.4.3.1 Motor Control Console 740
10.4.3.2 Junction Box 741
10.4.4 Hydraulic System 741
10.4.4.1 Physical Parameters of the Cutter Table 742
10.4.4.2 Hydraulic Piston Parameters 742
10.4.4.3 Flow Control Servovalves 742
10.4.4.4 Pilot Valves 745
10.4.4.5 Position Transducers 745
10.4.5 Pneumatic System 745
10.4.6 Economic Analysis 745
10.4.7 Networked Application 747
10.5 Exercises 748
10.6 Projects 749
10.6.1 Project 1: Automated Glue Dispensing System 749
10.6.2 Project 2: Material Testing Machine 749
10.6.3 Project 3: Active Orthosis 750
10.6.4 Project 4: Railway Car Braking System 750
10.6.5 Project 5: Machine Tool Control System 750
10.6.6 Project 6: Welding Robot 751
10.6.7 Project 7: Wood Strander 751
10.6.8 Project 8: Automated Mining Shovel 752
10.6.9 Project 9: Can-Filling Machine 753
10.6.10 Project 10: Fish-Marking Machine 753
10.6.11 Project 11: Machine for Grading Herring Roe 754
10.6.12 Project 12: Hydraulic Control System 755

Appendix A: Solid Mechanics 757
A.1 General Problem of Elasticity 757
A.1.1 Strain Components 757
A.1.2 Constitutive Equations 757
A.1.3 Equilibrium Equations 758
A.1.4 Compatibility Equations 758
A.2 Plane Strain Problem 758
A.2.1 Constitutive Equations 759
A.2.2 Equilibrium Equations 759
A.3 Plane Stress Problem 759
A.3.1 Constitutive Equations 760
A.3.2 Equilibrium Equations 760
A.3.3 Plane Stress Problem in Polar Coordinates 760
A.3.3.1 Strain Components 760
A.3.3.2 Constitutive Equations 761
A.3.3.3 Equilibrium Equations 761
A.4 Rotating Members 761
A.4.1 Rotating Disks 761

A.4.2 Rotating Thick Cylinders 762
A.4.2.1 Strain Equations 763
A.4.2.2 Stress–Strain (Constitutive) Relations 763
A.4.2.3 Equilibrium Equations 763
A.4.2.4 Final Result 764
A.4.2.5 Temperature Stresses 764
A.4.3 Particular Cases of Cylinders 764
A.4.3.1 Case 1: Axially Restrained Ends 764
A.4.3.2 Case 2: Thick Pressure Vessel 765
A.4.3.3 Case 3: Thin Pressure Vessel 765
A.4.3.4 Case 4: Rotating Cylinder with Free Ends 765
A.5 Mohr's Circle of Plane Stress 766
A.6 Torsion 767
A.6.1 Circular Members 767
A.6.2 Torque Sensor 769
A.7 Beams in Bending and Shear 772
A.7.1 Mohr's Theorems 772
A.7.2 Maxwell's Theorem of Reciprocity 772
A.7.3 Castigliano's First Theorem 773
A.7.4 Elastic Energy of Bending 773
A.8 Open-Coiled Helical Springs 773
A.8.1 Case 1: Axial Load W 773
A.8.2 Case 2: Axial Couple M 775
A.9 Circular Plates with Axisymmetric Loading 776
A.9.1 Strains 776
A.9.2 Stresses 776
A.9.3 Moments 776
A.9.4 Equilibrium Equations 777
A.9.5 Boundary Conditions 778
A.9.5.1 Fixed Edge 778
A.9.5.2 Simply Supported Edge 778
A.9.5.3 Partially Restrained Edge 778

Appendix B: Transform Techniques 779
B.1 Laplace Transform 779
B.1.1 Laplace Transforms of Some Common Functions 780
B.1.1.1 Laplace Transform of a Constant 780
B.1.1.2 Laplace Transform of the Exponential 780
B.1.1.3 Laplace Transform of Sine and Cosine 781
B.1.1.4 Laplace Transform of a Derivative 782
B.1.2 Table of Laplace Transforms 783
B.2 Response Analysis 785
B.3 Transfer Function 790
B.4 Fourier Transform 792
B.4.1 Frequency-Response Function (Frequency Transfer Function) 793
B.5 The s-Plane 793
B.5.1 An Interpretation of Laplace and Fourier Transforms 794
B.5.2 Application in Circuit Analysis 794

Appendix C: Probability and Statistics 797
C.1 Probability Distribution 797
C.1.1 Cumulative Probability Distribution Function 797
C.1.2 Probability Density Function 797
C.1.3 Mean Value (Expected Value) 798
C.1.4 Root-Mean-Square Value 798
C.1.5 Variance and Standard Deviation 798
C.1.6 Independent Random Variables 799
C.1.7 Sample Mean and Sample Variance 800
C.1.8 Unbiased Estimates 800
C.1.9 Gaussian Distribution 802
C.1.10 Confidence Intervals 803
C.2 Sign Test and Binomial Distribution 806
C.3 Least Squares Fit 808

Appendix D: Software Tools 813
D.1 Simulink® 813
D.2 MATLAB® 813
D.2.1 Computations 813
D.2.1.1 Arithmetic 814
D.2.1.2 Arrays 814
D.2.2 Relational and Logical Operations 815
D.2.3 Linear Algebra 816
D.2.4 M-Files 817
D.3 Control Systems Toolbox 817
D.3.1 Compensator Design Example 817
D.3.1.1 Building the System Model 820
D.3.1.2 Importing Model into SISO Design Tool 820
D.3.1.3 Adding Lead and Lag Compensators 820
D.3.2 PID Control with Controller Tuning 821
D.3.2.1 Proportional Control 821
D.3.2.2 PI Control 821
D.3.2.3 PID Control 824
D.3.3 Root Locus Design Example 825
D.4 Fuzzy Logic Toolbox 825
D.4.1 Graphical Editors 828
D.4.2 Command Line–Driven FIS Design 828
D.4.3 Practical Stand-Alone Implementation in C 829
D.5 LabVIEW 829
D.5.1 Introduction 830
D.5.2 Some Key Concepts 830
D.5.3 Working with LabVIEW 831
D.5.3.1 Front Panel 832
D.5.3.2 Block Diagrams 832
D.5.3.3 Tools Palette 834
D.5.3.4 Controls Palette 834
D.5.3.5 Functions Palette 834
