

Fourier Series and Numerical Methods *for* Partial Differential Equations

Richard A. Bernatz

CONTENTS

Preface	xi
Acknowledgments	xiii
1 Introduction	1
1.1 Terminology and Notation	1
1.2 Classification	2
1.3 Canonical Forms	3
1.4 Common PDEs	4
1.5 Cauchy–Kowalevski Theorem	5
1.6 Initial Boundary Value Problems	7
1.7 Solution Techniques	8
1.8 Separation of Variables	9
Exercises	15
2 Fourier Series	19
2.1 Vector Spaces	19
2.1.1 Subspaces	21
2.1.2 Basis and Dimension	21

2.1.3	Inner Products	22
2.2	The Integral as an Inner Product	23
2.2.1	Piecewise Continuous Functions	24
2.2.2	Inner Product on $\mathbb{C}_p(a, b)$	25
2.3	Principle of Superposition	26
2.3.1	Finite Case	26
2.3.2	Infinite Case	28
2.3.3	Hilbert Spaces	30
2.4	General Fourier Series	30
2.5	Fourier Sine Series on $(0, c)$	31
2.5.1	Odd, Periodic Extensions	33
2.6	Fourier Cosine Series on $(0, c)$	35
2.6.1	Even, Periodic Extensions	36
2.7	Fourier Series on $(-c, c)$	37
2.7.1	$2c$ -Periodic Extensions	40
2.8	Best Approximation	40
2.9	Bessel's Inequality	45
2.10	Piecewise Smooth Functions	46
2.11	Fourier Series Convergence	50
2.11.1	Alternate Form	50
2.11.2	Riemann–Lebesgue Lemma	51
2.11.3	A Dirichlet Kernel Lemma	52
2.11.4	A Fourier Theorem	54
2.12	$2c$ -Periodic Functions	58
2.13	Concluding Remarks	61
	Exercises	62

3 Sturm–Liouville Problems 69

3.1	Basic Examples	69
3.2	Regular Sturm–Liouville Problems	70
3.3	Properties	71
3.3.1	Eigenfunction Orthogonality	72
3.3.2	Real Eigenvalues	74
3.3.3	Eigenfunction Uniqueness	75
3.3.4	Non-negative Eigenvalues	77
3.4	Examples	79
3.4.1	Neumann Boundary Conditions on $[0, c]$	79
3.4.2	Robin and Neumann BCs	80

3.4.3	Periodic Boundary Conditions	83
3.5	Bessel's Equation	85
3.6	Legendre's Equation	90
	Exercises	93
4	Heat Equation	97
4.1	Heat Equation in 1D	97
4.2	Boundary Conditions	100
4.3	Heat Equation in 2D	101
4.4	Heat Equation in 3D	103
4.5	Polar-Cylindrical Coordinates	105
4.6	Spherical Coordinates	108
	Exercises	108
5	Heat Transfer in 1D	113
5.1	Homogeneous IBVP	113
5.1.1	Example: Insulated Ends	114
5.2	Semihomogeneous PDE	116
5.2.1	Variation of Parameters	117
5.2.2	Example: Semihomogeneous IBVP	119
5.3	Nonhomogeneous Boundary Conditions	120
5.3.1	Example: Nonhomogeneous Boundary Condition	122
5.3.2	Example: Time-Dependent Boundary Condition	125
5.3.3	Laplace Transforms	127
5.3.4	Duhamel's Theorem	128
5.4	Spherical Coordinate Example	131
	Exercises	133
6	Heat Transfer in 2D and 3D	139
6.1	Homogeneous 2D IBVP	139
6.1.1	Example: Homogeneous IBVP	142
6.2	Semihomogeneous 2D IBVP	143
6.2.1	Example: Internal Source or Sink	146
6.3	Nonhomogeneous 2D IBVP	147
6.4	2D BVP: Laplace and Poisson Equations	150
6.4.1	Dirichlet Problems	150
6.4.2	Dirichlet Example	154
6.4.3	Neumann Problems	156

6.4.4	Neumann Example	159
6.4.5	Dirichlet, Neumann BC Example	163
6.4.6	Poisson Problems	166
6.5	Nonhomogeneous 2D Example	169
6.6	Time-Dependent BCs	170
6.7	Homogeneous 3D IBVP	173
	Exercises	176
7	Wave Equation	181
7.1	Wave Equation in 1D	181
7.1.1	d'Alembert's Solution	184
7.1.2	Homogeneous IBVP: Series Solution	187
7.1.3	Semihomogeneous IBVP	190
7.1.4	Nonhomogeneous IBVP	193
7.1.5	Homogeneous IBVP in Polar Coordinates	195
7.2	Wave Equation in 2D	199
7.2.1	2D Homogeneous Solution	199
	Exercises	202
8	Numerical Methods: an Overview	207
8.1	Grid Generation	208
8.1.1	Adaptive Grids	210
8.1.2	Multilevel Methods	212
8.2	Numerical Methods	214
8.2.1	Finite Difference Method	214
8.2.2	Finite Element Method	216
8.2.3	Finite Analytic Method	217
8.3	Consistency and Convergence	218
9	The Finite Difference Method	219
9.1	Discretization	219
9.2	Finite Difference Formulas	222
9.2.1	First Partial	222
9.2.2	Second Partial	222
9.3	1D Heat Equation	223
9.3.1	Explicit Formulation	223
9.3.2	Implicit Formulation	224
9.4	Crank–Nicolson Method	226

9.5	Error and Stability	226
9.5.1	Error Types	226
9.5.2	Stability	227
9.6	Convergence in Practice	231
9.7	1D Wave Equation	231
9.7.1	Implicit Formulation	231
9.7.2	Initial Conditions	233
9.8	2D Heat Equation in Cartesian Coordinates	234
9.9	Two-Dimensional Wave Equation	239
9.10	2D Heat Equation in Polar Coordinates	239
	Exercises	244
10	Finite Element Method	249
10.1	General Framework	250
10.2	1D Elliptical Example	252
10.2.1	Reformulations	252
10.2.2	Equivalence in Forms	253
10.2.3	Finite Element Solution	255
10.3	2D Elliptical Example	257
10.3.1	Weak Formulation	257
10.3.2	Finite Element Approximation	258
10.4	Error Analysis	261
10.5	1D Parabolic Example	264
10.5.1	Weak Formulation	264
10.5.2	Method of Lines	265
10.5.3	Backward Euler's Method	266
	Exercises	268
11	Finite Analytic Method	271
11.1	1D Transport Equation	272
11.1.1	Finite Analytic Solution	273
11.1.2	FA and FD Coefficient Comparison	275
11.1.3	Hybrid Finite Analytic Solution	279
11.2	2D Transport Equation	280
11.2.1	FA Solution on Uniform Grids	282
11.2.2	The Poisson Equation	287
11.3	Convergence and Accuracy	290
	Exercises	291

x CONTENTS

Appendix A: FA 1D Case	295
Appendix B: FA 2D Case	303
B.1 The Case $\tilde{\phi} = 1$	308
B.2 The Case $\tilde{\phi} = -Bx + Ay$	309
References	311
Index	315
