

# HUMAN MOLECULAR GENETICS

GS  
Garland Science

4<sup>TH</sup> EDITION

TOM STRACHAN AND ANDREW READ

---

# Contents

---

<b>Chapter 1</b>	Nucleic Acid Structure and Gene Expression	1
<b>Chapter 2</b>	Chromosome Structure and Function	29
<b>Chapter 3</b>	Genes in Pedigrees and Populations	61
<b>Chapter 4</b>	Cells and Cell–Cell Communication	91
<b>Chapter 5</b>	Principles of Development	133
<b>Chapter 6</b>	Amplifying DNA: Cell-based DNA Cloning and PCR	163
<b>Chapter 7</b>	Nucleic Acid Hybridization: Principles and Applications	191
<b>Chapter 8</b>	Analyzing the Structure and Expression of Genes and Genomes	213
<b>Chapter 9</b>	Organization of the Human Genome	255
<b>Chapter 10</b>	Model Organisms, Comparative Genomics, and Evolution	297
<b>Chapter 11</b>	Human Gene Expression	345
<b>Chapter 12</b>	Studying Gene Function in the Post-Genome Era	381
<b>Chapter 13</b>	Human Genetic Variability and Its Consequences	405
<b>Chapter 14</b>	Genetic Mapping of Mendelian Characters	441
<b>Chapter 15</b>	Mapping Genes Conferring Susceptibility to Complex Diseases	467
<b>Chapter 16</b>	Identifying Human Disease Genes and Susceptibility Factors	497
<b>Chapter 17</b>	Cancer Genetics	537
<b>Chapter 18</b>	Genetic Testing of Individuals	569
<b>Chapter 19</b>	Pharmacogenetics, Personalized Medicine, and Population Screening	605
<b>Chapter 20</b>	Genetic Manipulation of Animals for Modeling Disease and Investigating Gene Function	639
<b>Chapter 21</b>	Genetic Approaches to Treating Disease	677
	Glossary	719
	Index	737
