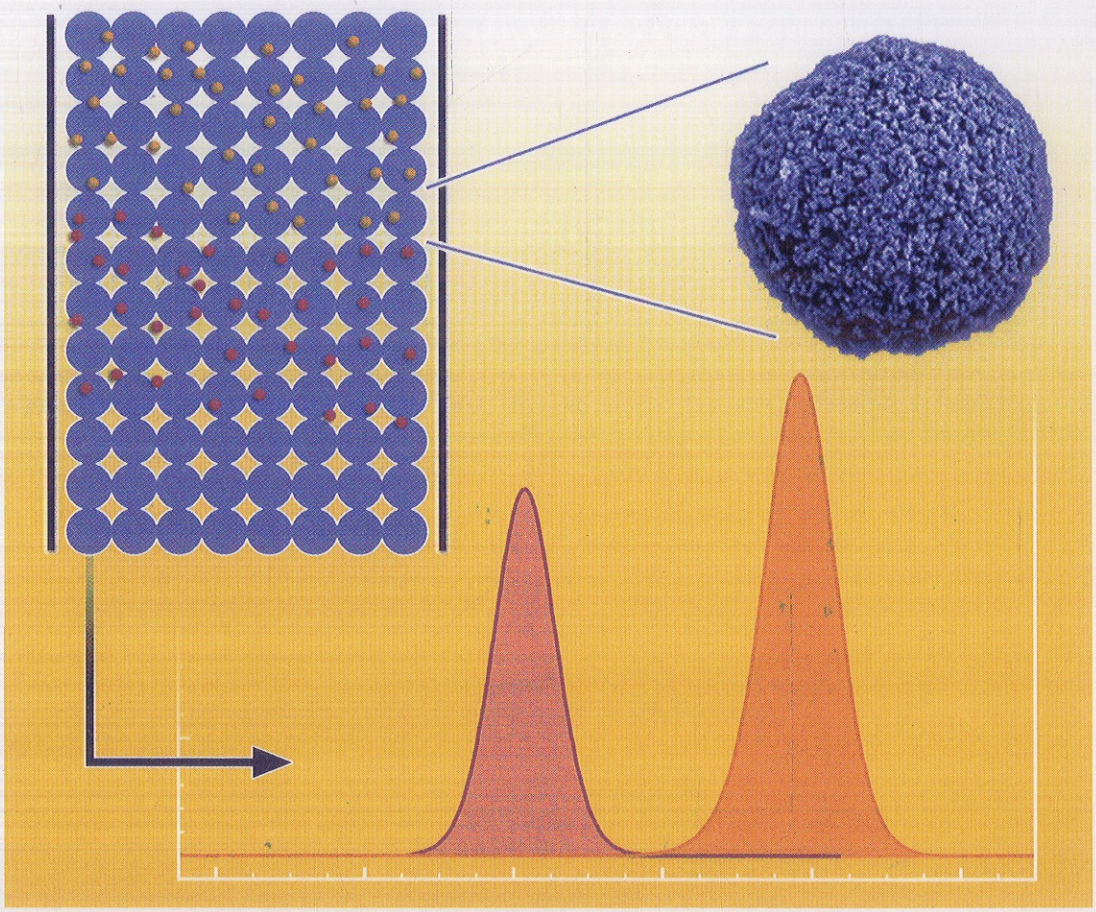
WILEY-VCH

Protein Chromatography

Process Development and Scale-Up



Contents

Preface *IX*
Nomenclature *XIII*

1 Downstream Processing of Biotechnology Products 1
1.1 Introduction 1
1.2 Bioproducts and their Contaminants 2
1.2.1 Biomolecules: Chemistry and Structure 2
1.2.1.1 Proteins 2
1.2.1.2 Oligonucleotides and Polynucleotides 15
1.2.1.3 Endotoxins 16
1.2.2 Biomolecules: Physiochemical Properties 19
1.2.2.1 UV Absorbance 19
1.2.2.2 Size 21
1.2.2.3 Charge 24
1.2.2.4 Hydrophobicity 27
1.2.2.5 Solubility 29
1.2.2.6 Stability 32
1.2.2.7 Viscosity 33
1.2.2.8 Diffusivity 36
1.3 Bioprocesses 37
1.3.1 Expression Systems 37
1.3.2 Host Cells Composition 40
1.3.3 Culture Media 41
1.3.4 Components of the Culture Broth 43
1.3.5 Product Quality Requirements 43
1.3.5.1 Types of Impurities 43
1.3.5.2 Regulatory Aspects and Validation 45
1.3.5.3 Purity Requirements 47
1.4 Role of Chromatography in Downstream Processing 49
References 54

Protein Chromatography: Process Development and Scale-Up. Giorgio Carta and Alois Jungbauer

2 Introduction to Protein Chromatography *57*
2.1 Introduction *57*
2.2 Basic Principles and Definitions *57*
2.3 Modes of Operation *61*
2.3.1 Elution Chromatography *63*
2.3.2 Frontal Analysis *64*
2.3.3 Displacement Chromatography *65*
2.3.4 Simulated Moving Bed Separators (SMB) *67*
2.4 Performance Factors *69*
2.5 Separation Performance Metrics *74*
2.5.1 Column Efficiency *74*
2.5.2 Chromatographic Resolution *78*
2.5.3 Dynamic Binding Capacity *80*
2.5.4 Scaling Relationships *81*
References *83*

3 Chromatography Media *85*
3.1 Introduction *85*
3.2 Interaction Types and Chemistry *86*
3.2.1 Steric Interaction *86*
3.2.2 Hydrophobic Interaction *87*
3.2.3 Electrostatic Interaction *94*
3.2.4 Complexation *97*
3.2.5 Biospecific Interaction *99*
3.2.6 Mixed Mode Interaction *103*
3.3 Buffers and Mobile Phases *105*
3.4 Physical Structure and Properties *108*
3.4.1 Base Matrices *109*
3.4.1.1 Natural Carbohydrate Polymers *109*
3.4.1.2 Synthetic Polymers *111*
3.4.1.3 Inorganic Materials *112*
3.4.2 Porosity, Pore Size, and Surface Area *113*
3.4.3 Particle Size and Particle Size Distribution *119*
3.4.4 Mechanical and Flow Properties *119*
References *122*

4 Laboratory and Process Columns and Equipment *125*
4.1 Introduction *125*
4.2 Laboratory-scale Systems *126*
4.2.1 Pumps *128*
4.2.2 Buffer Mixers *130*
4.2.3 Monitors *132*
4.2.4 System Volumes *134*
4.3 Process Columns and Equipment *135*

4.3.1 Columns *135*
4.3.2 Systems *140*
4.3.3 Column Packing *141*
References *143*

5 Adsorption Equilibria *145*
5.1 Introduction *145*
5.2 Single Component Systems *147*
5.3 Multi-component Systems *157*
References *160*

6 Adsorption Kinetics *161*
6.1 Introduction *161*
6.2 Rate Mechanisms *161*
6.2.1 External Mass Transfer *163*
6.2.2 Pore Diffusion *165*
6.2.3 Diffusion in the Adsorbed Phase *170*
6.2.4 Intra-particle Convection *173*
6.2.5 Kinetic Resistance to Binding *178*
6.3 Batch Adsorption Kinetics *179*
6.3.1 Rate Equations *181*
6.3.2 Analytical Solutions *183*
6.3.2.1 External Mass Transfer Control *184*
6.3.2.2 Solid Diffusion Control *184*
6.3.2.3 Pore Diffusion Control *186*
6.3.2.4 Binding Kinetics Control *187*
6.3.2.5 LDF Solution *187*
6.3.2.6 Combined Mass Transfer Resistances *188*
6.3.3 Experimental Verification of Transport Mechanisms *190*
6.3.4 Multi-component Protein Adsorption Kinetics *195*
References *197*

7 Dynamics of Chromatography Columns *201*
7.1 Introduction *201*
7.2 Conservation Equations *201*
7.2.1 Boundary Conditions *203*
7.2.2 Dimensionless System *203*
7.3 Local Equilibrium Dynamics *205*
7.4 Multi-component Systems *217*
7.5 Displacement Development *227*
7.5.1 Prediction of the Isotachic Train *228*
7.5.2 Transient Development *234*
References *235*

8 Effects of Dispersion and Adsorption Kinetics on Column Performance *237*
8.1 Introduction *237*
8.2 Empirical Characterization of Column Efficiency *238*
8.3 Modeling and Prediction of Column Efficiency *246*
8.3.1 Plate Model *246*
8.3.2 Rate Models with Linear Isotherms *249*
8.3.3 Rate Models with Non-Linear Isotherms *258*
8.3.4 Rate Models for Competitive Adsorption Systems *270*
References *274*

9 Gradient Elution Chromatography *277*
9.1 Introduction *277*
9.2 General Theory for Gradient Elution with Linear Isotherms *279*
9.3 LGE Relationships for Ion Exchange Chromatography *286*
9.4 LGE Relationships for RPC and HIC *295*
9.5 Separations with pH Gradients *299*
9.6 Modeling Gradient Elution with Non-linear Isotherms *304*
References *307*

10 Design of Chromatographic Processes *309*
10.1 Introduction *309*
10.2 Chromatographic Process Steps and Constraints *311*
10.3 Design for Capture *313*
10.3.1 Wash Step *315*
10.3.2 Elution Step *315*
10.3.3 CIP Step *316*
10.3.4 Equilibration Step *316*
10.4 Design for Chromatographic Resolution *321*
10.5 SMB Design *327*
References *338*

Index *341*
