GEOLOGICAL FIELD TECHNIQUES

 WILEY-BLACKWELL

 The Open
University

Contents

Preface	x
Acknowledgements	xi
1 INTRODUCTION	1
1.1 A selection of general books and reference material on geology	2
1.2 Books on geological field techniques	3
2 FIELD EQUIPMENT AND SAFETY	4
2.1 Introduction	4
2.2 The hand lens and binoculars	5
2.3 The compass-clinometer	6
2.3.1 Orientation of a dipping plane	11
2.3.2 Orientation of a linear feature	16
2.3.3 Triangulation: Determining location using a compass	20
2.4 Global positioning systems and altimeters	25
2.5 Measuring distance and thickness	26
2.5.1 Standard thickness and distance measurements	26
2.5.2 Use of the Jacob staff to measure the thickness of inclined strata	27
2.6 Classification and colour charts	28
2.7 Hammer, chisels and other hardware	31
2.8 The hardcopy field notebook	33
2.9 The laptop, netbook or PDA as a notebook	34
2.10 Writing equipment, maps and relevant literature	35
2.10.1 Writing equipment	35
2.10.2 Maps and relevant literature	35
2.11 Comfort, field safety and field safety equipment	36
2.11.1 Clothes, backpack/rucksack and personal provisions	36
2.11.2 Field safety	36
2.11.3 Field safety equipment	39
2.12 Conservation, respect and obtaining permission	40
2.13 Further reading	41
3 INTRODUCTION TO FIELD OBSERVATIONS AT DIFFERENT SCALES	42
3.1 Introduction: What, where and how?	42
3.1.1 Defining the fieldwork objectives	42
3.1.2 Deciding where to do the fieldwork	43
3.1.3 Locating your position	45
3.2 Scale of observation, where to start and basic measurements	45
3.2.1 Regional context	45
3.2.2 Whole exposure	46
3.2.3 Hand specimens	49
3.3 Overview of possible data formats	51

4 THE FIELD NOTEBOOK	53
4.1 Introduction: The purpose of field notes	53
4.2 Field notebook layout	54
4.2.1 Preliminary pages	54
4.2.2 Daily entries	54
4.2.3 General tips	56
4.3 Field sketches: A picture is worth a thousand words	57
4.3.1 General principles: Aims, space and tools	59
4.3.2 Sketches of exposures	63
4.3.3 Sketching metre- and centimetre-scale features	67
4.3.4 Sketch maps	68
4.4 Written notes: Recording data, ideas and interpretation	72
4.4.1 Notes recording data and observations	72
4.4.2 Notes recording interpretation, discussion and ideas	72
4.5 Correlation with other data sets and interpretations	77
5 RECORDING PALAEOLOGICAL INFORMATION	79
5.1 Introduction: Fossils are smart particles	79
5.1.1 Why are fossils important?	79
5.1.2 Collecting fossil data	80
5.2 Fossil types and preservation	82
5.2.1 Body fossil classification	82
5.2.2 Body fossil preservation	82
5.2.3 Trace fossils	85
5.2.4 Molecular fossils	87
5.3 Fossil distribution and where to find them	87
5.3.1 Transported or life position?	88
5.4 Sampling strategies	90
5.4.1 Sampling for biostratigraphic or evolutionary studies	90
5.4.2 Sampling of bedding surfaces and palaeoecology	92
5.5 Estimating abundance	95
5.5.1 Presence/absence and qualitative abundance estimates	96
5.5.2 Quantitative measures of abundance	96
5.5.3 How many samples are required?	99
5.6 Summary	100
5.7 Further reading	101
6 RECORDING FEATURES OF SEDIMENTARY ROCKS AND CONSTRUCTING GRAPHIC LOGS	102
6.1 Introduction	102
6.2 Description, recognition and recording of sedimentary deposits and sedimentary structures	104
6.2.1 Recording sedimentary lithology	104
6.2.2 Recording sedimentary structures	109
6.3 Graphic logs	117
6.3.1 Conventions for graphic logs	119
6.3.2 Constructing a graphic log	121
6.4 Rocks in space: Reconstructing sedimentary environments and their diagnostic features	127

6.5	Using sedimentary rocks to interpret climate change and sea-level change	133
6.5.1	Climate change	134
6.5.2	Sequence stratigraphy and relative sea-level change	134
6.6	Further reading	137
7	RECORDING FEATURES OF IGNEOUS ROCKS	139
7.1	Equipment, basic tips and safety	139
7.2	Field relationships of igneous rocks	140
7.2.1	Relationships with surrounding rocks	140
7.2.2	Internal architecture: Joints and veins	144
7.2.3	Internal architecture: Other exposure-scale fabrics	146
7.3	Mineralogy and small-scale textures of igneous rocks	154
7.3.1	Petrologic type	155
7.3.2	Mineral texture and fabric	155
7.4	Recent and active volcanoes	159
7.4.1	Equipment and safety	159
7.4.2	Access	160
7.4.3	Observations	160
7.5	Further reading	161
8	RECORDING STRUCTURAL INFORMATION	163
8.1	Equipment and measurement	164
8.1.1	Structural measurements and notations	164
8.2	Brittle structures: Faults, joints and veins	165
8.2.1	Planar brittle features – orientation	165
8.2.2	Determining past motion on brittle structures	170
8.3	Ductile structures: Shear zones, foliations and folds	176
8.3.1	Orientation of ductile planar features	176
8.3.2	Direction of shear/stretching: Stretching lineations	180
8.3.3	Sense of shear: Kinematic indicators	182
8.3.4	Magnitude of shear strain	185
8.3.5	Fold analysis	185
8.4	Further reading	191
9	RECORDING FEATURES OF METAMORPHIC ROCKS	192
9.1	Basic skills and equipment for metamorphic fieldwork	192
9.1.1	Field relations and context	192
9.2	Textures	194
9.2.1	Banding	194
9.2.2	Grain textures	196
9.2.3	Reaction textures	197
9.3	Mineralogy	198
9.3.1	Identifying common metamorphic minerals	198
9.3.2	Using mineral assemblages	198
9.3.3	Classification of metamorphic rocks	200
9.4	Unravelling metamorphism and deformation	201
9.4.1	Pre-kinematic features	202
9.4.2	Syn-kinematic features	202
9.4.3	Post-kinematic features	203
9.5	Further reading	205

10	MAKING A GEOLOGICAL MAP	206
10.1	Principles and aims	206
10.2	Preparation and materials	207
10.2.1	Base maps and other aids	207
10.2.2	Equipment for mapping	212
10.3	Location, location, location	214
10.3.1	Equipment	214
10.3.2	Using base maps	214
10.4	Making a field map	216
10.4.1	Information to record on field maps	216
10.4.2	The evolving map	218
10.4.3	Sketch cross-sections	221
10.5	Mapping techniques	222
10.5.1	Traverse mapping	223
10.5.2	Contact mapping	225
10.5.3	Exposure mapping	226
10.5.4	Using other evidence	228
10.6	The geological map	233
10.6.1	Inking in the field map	233
10.6.2	Cross-sections	235
10.6.3	Fair copy maps	235
10.6.4	Digital maps and GIS	239
10.7	Further reading	240
11	RECORDING NUMERICAL DATA AND USE OF INSTRUMENTS IN THE FIELD	241
11.1	Data collection	241
11.1.1	Instrument calibration and base stations	244
11.1.2	Survey grids	244
11.2	Transport and protection of the instruments	245
11.3	Correlation with other data sets	245
11.4	Further reading	246
12	PHOTOGRAPHY	247
13	SAMPLING	250
13.1	Selecting and labelling samples	250
13.1.1	Samples for thin-sections	251
13.1.2	Orientated samples	251
13.1.3	Samples for geochemical analysis	253
13.1.4	Samples for mineral extraction	253
13.1.5	Samples for fossils	253
13.1.6	Sampling for regional studies	254
13.1.7	High-resolution sample sets	254
13.1.8	Labelling samples and their packaging	255
13.2	Practical advice	256
13.2.1	Packing and marking materials	256
13.2.2	Extraction of samples	257
14	CONCLUDING REMARKS	259
14.1	Further reading on scientific report writing	260
