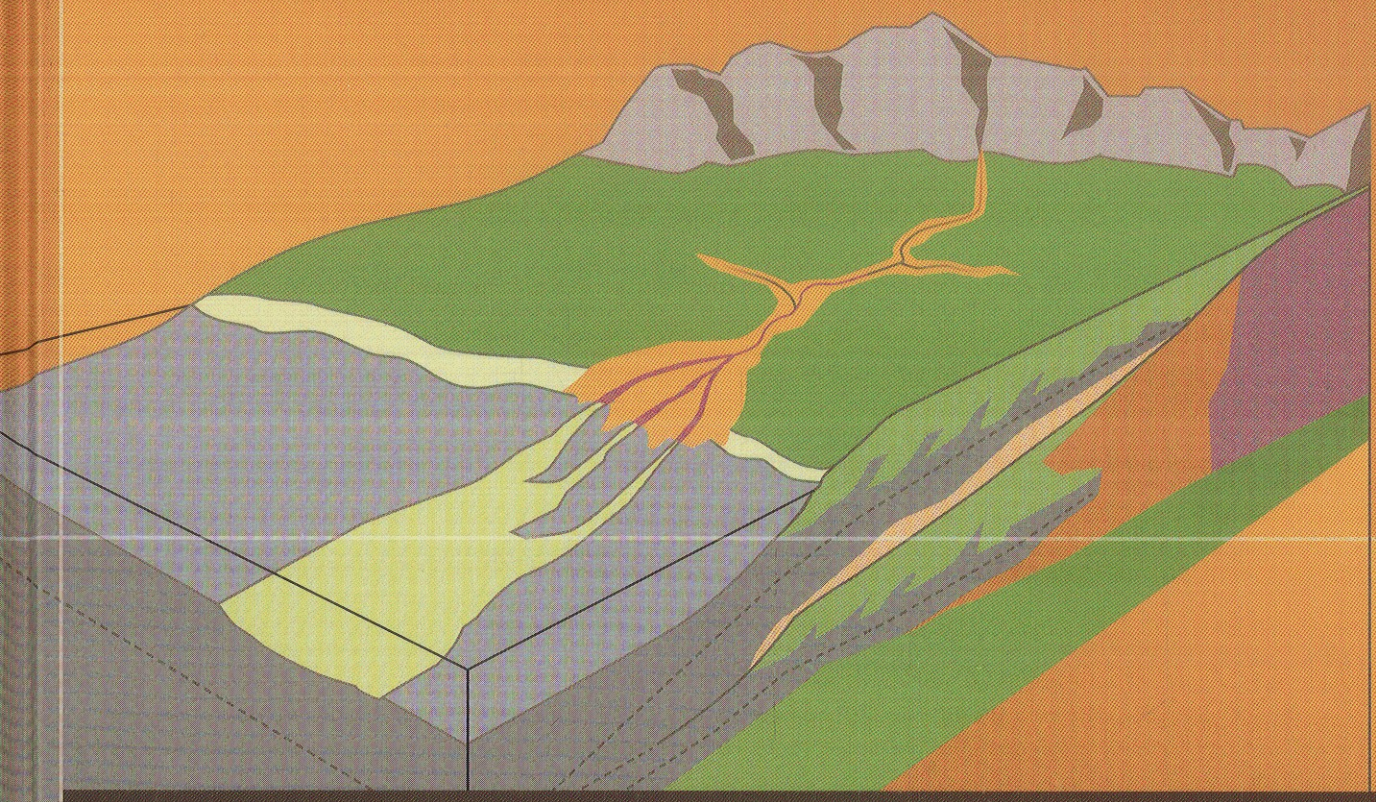
Andrew D. Miall



The Geology of Stratigraphic Sequences

2nd Edition

Springer

Contents

Part I The Emergence of Modern Concepts **1**

1 Historical and Methodological Background **3**
1.1 Introduction 3
1.2 Methods in Geology 4
1.2.1 The Significance of Sequence Stratigraphy 6
1.2.2 Data and Argument in Geology 7
1.2.3 The Hermeneutic Circle and the Emergence of Sequence Stratigraphy 9
1.2.4 Paradigms and Exemplars 11
1.3 The Development of Descriptive Stratigraphy 13
1.3.1 The Growth of Modern Concepts 13
1.3.2 Do Stratigraphic Units Have "Time" Significance? 16
1.3.3 The Development of Modern Chronostratigraphy 21
1.4 The Continual Search for a "Pulse of the Earth" 26
1.5 Problems and Research Trends: The Current Status 38
1.6 Current Literature 41
1.7 Stratigraphic Terminology 43

2 The Basic Sequence Model **47**
2.1 Introduction 47
2.2 Elements of the Model 48
2.2.1 Accommodation and Supply 49
2.2.2 Stratigraphic Architecture 50
2.2.3 Depositional Systems and Systems Tracts 55
2.3 Sequence Models in Clastic and Carbonate Settings 57
2.3.1 Marine Clastic Depositional Systems and Systems Tracts 57
2.3.2 Nonmarine Depositional Systems 64
2.3.3 Carbonate Depositional Systems 68
2.4 Sequence Definitions 73

3 Other Methods for the Stratigraphic Analysis of Cycles of Base-Level Change **77**
3.1 Introduction 77
3.2 Facies Cycles 77
3.3 Areas and Volumes of Stratigraphic Units 80
3.4 Hypsometric Curves 81

3.5 Backstripping 83
3.6 Sea-Level Estimation from Paleoshorelines and Other Fixed Points 90
3.7 Documentation of Metre-Scale Cycles 93
3.8 Integrated Tectonic-Stratigraphic Analysis 97

Part II The Stratigraphic Framework 101

4 The Major Types of Stratigraphic Cycle 103
4.1 Introduction 103
4.2 Sequence Hierarchy 103
4.3 The Supercontinent Cycle 112
4.4 Cycles with Episodicities of Tens of Millions of Years 113
4.5 Cycles with Million-Year Episodicities 114
4.6 Cycles with Episodicities of Less Than One Million Years . . . 117

5 Cycles with Episodicities of Tens to Hundreds of Millions of Years 119
5.1 Climate, Sedimentation and Biogenesis 119
5.2 The Supercontinent Cycle 121
5.2.1 The Tectonic-Stratigraphic Model 121
5.2.2 The Phanerozoic Record 123
5.3 Cycles with Episodicities of Tens of Millions of years 125
5.3.1 Regional to Intercontinental Correlations 125
5.3.2 Tectonostratigraphic Sequences 133
5.4 Main Conclusions 142

6 Cycles with Million-Year Episodicities 143
6.1 Continental Margins 143
6.1.1 Clastic Platforms and Margins 143
6.1.2 Carbonate Cycles of Platforms and Craton Margins 148
6.1.3 Mixed Carbonate-Clastic Successions 153
6.2 Foreland Basins 160
6.2.1 Foreland Basin of the North American Western Interior 160
6.2.2 Other Foreland Basins 164
6.3 Arc-Related Basins 167
6.3.1 Forearc Basins 167
6.3.2 Backarc Basins 173
6.4 Cyclothems and Mesothems 173
6.5 Conclusions 178

7 Cycles with Episodicities of Less than One Million Years 179
7.1 Introduction 179
7.2 Neogene Clastic Cycles of Continental Margins 180
7.2.1 The Gulf Coast Basin of the United States 180
7.2.2 Wanganui Basin, North Island, New Zealand 188
7.2.3 Other Examples of Neogene High-Frequency Cycles 199
7.2.4 The Deep-Marine Record 202
7.3 Pre-neogene Marine Carbonate and Clastic Cycles 206
7.4 Late Paleozoic Cyclothems 209

7.5 Lacustrine Clastic and Chemical Rhythms 217
7.6 High-Frequency Cycles in Foreland Basins 223
7.7 Main Conclusions 235

Part III Mechanisms 237

8 Summary of Sequence-Generating Mechanisms 239

9 Long-Term Eustasy and Epeirogeny 245
9.1 Mantle Processes and Dynamic Topography 245
9.2 Supercontinent Cycles 246
9.3 Cycles with Episodicities of Tens of Millions of Years 248
9.3.1 Eustasy 248
9.3.2 Dynamic Topography and Epeirogeny 255
9.3.3 The Origin of Sloss Sequences 259
9.4 Main Conclusions 259

10 Tectonic Mechanisms 261
10.1 Introduction 261
10.2 Rifting and Thermal Evolution of Divergent Plate Margins . . . 265
10.2.1 Basic Geophysical Models and Their Implications for Sea-Level Change 265
10.2.2 The Origins of Some Tectonostratigraphic Sequences 271
10.3 Tectonism on Convergent Plate Margins and in Collision Zones . 278
10.3.1 Magmatic Arcs and Subduction 278
10.3.2 Rates of Uplift and Subsidence on Convergent Margins 280
10.3.3 Tectonism Versus Eustasy in Foreland Basins 282
10.4 Intraplate Stress 308
10.4.1 The Pattern of Global Stress 308
10.4.2 In-Plane Stress as a Control of Sequence Architecture 311
10.4.3 In-Plane Stress and Regional Histories of Sea-Level Change . . 314
10.5 Basement Control 318
10.6 Sediment Supply and the Importance of Big Rivers 320
10.7 Environmental Change 325
10.8 Main Conclusions 325

11 Orbital Forcing 327
11.1 Introduction 327
11.2 The Nature of Milankovitch Processes 328
11.2.1 Components of Orbital Forcing 328
11.2.2 Basic Climatology 330
11.2.3 Variations with Time in Orbital Periodicities 332
11.2.4 Isostasy and Geoid Changes 333
11.2.5 Nonglacial Milankovitch Cyclicity 334
11.2.6 The Nature of the Cyclostratigraphic Data Base 338
11.3 The Geologic Record 339
11.3.1 The Sensitivity of the Earth to Glaciation 339
11.3.2 The Cenozoic Record 341
11.3.3 Glacioeustasy in the Mesozoic? 343
11.3.4 Late Paleozoic Cyclothems 346

11.4 Distinguishing Between Orbital Forcing and Tectonic Driving Mechanisms . . . 349
11.5 Main Conclusions . . . 352

Part IV Chronostratigraphy and Correlation: An Assessment of the Current Status of "Global Eustasy" . . . 355

12 The Concept of the Global Cycle Chart . . . 357
12.1 From Vail to Haq . . . 357
12.2 The Two-Paradigm Problem . . . 363
12.2.1 The Global-Eustasy Paradigm . . . 363
12.2.2 The Complexity Paradigm . . . 364
12.3 Defining and Deconstructing Global Eustasy and Complexity Texts . . . 364
12.4 Invisible Colleges and the Advancement of Knowledge . . . 368
12.5 The Global-Eustasy Paradigm—A Revolution in Trouble? . . . 373
12.6 Conclusions . . . 377

13 Time in Sequence Stratigraphy . . . 381
13.1 Introduction . . . 381
13.2 Hierarchies of Time and the Completeness of the Stratigraphic Record . . . 381
13.3 Main Conclusions . . . 389

14 Chronostratigraphy, Correlation, and Modern Tests for Global Eustasy . . . 391
14.1 Introduction . . . 391
14.2 Chronostratigraphic Models and the Testing of Correlations . . . 392
14.3 Chronostratigraphic Meaning of Unconformities . . . 396
14.4 A Correlation Experiment . . . 400
14.5 Testing for Eustasy: The Way Forward . . . 402
14.5.1 Introduction . . . 402
14.5.2 The Dating and Correlation of Stratigraphic Events: Potential Sources of Uncertainty . . . 403
14.5.3 The Value of Quantitative Biostratigraphic Methods . . . 410
14.5.4 Assessment of Relative Biostratigraphic Precision . . . 413
14.5.5 Correlation of Biozones with the Global Stage Framework . . . 415
14.5.6 Assignment of Absolute Ages and the Importance of the Modern Time Scale . . . 418
14.6 Modern Tests of the Global-Eustasy Paradigm . . . 425
14.6.1 Cretaceous-Paleogene Sequence Stratigraphy of New Jersey . . . 426
14.6.2 Other Modern High-Resolution Studies of Cretaceous-Paleogene Sequence Stratigraphy . . . 433
14.6.3 Sequence Stratigraphy of the Neogene . . . 435
14.6.4 The Growing Evidence for Glacioeustasy in the Mesozoic and Early Cenozoic . . . 438
14.7 Cyclostratigraphy and Astrochronology . . . 441
14.7.1 Historical Background of Cyclostratigraphy . . . 441
14.7.2 The Building of a Time Scale . . . 443

14.8 Testing Correlations with Carbon Isotope Chemostratigraphy . . 453
14.9 Main Conclusions 458

15 Future Directions 461
15.1 Research Methods 461
15.2 Remaining Questions 463
15.2.1 Future Advances in Cyclostratigraphy? 463
15.2.2 Tectonic Mechanisms of Sequence Generation 464
15.2.3 Orbital Forcing 464
15.2.4 The Codification of Sequence Nomenclature 464
