<b>1 Introduction</b>	<b>1</b>
<i>Peter G. Miller, John Strang and Peter M. Miller</i>	
1.1 Introduction	1
1.2 Where to start?	1
1.3 Does theory matter?	2
1.4 The literature review	3
1.5 Which method suits my question – is a screwdriver better than a saw?	4
1.6 Focus and structure of the book	5
1.7 Terminology	6
1.8 The need for a wider perspective and more careful selection of study design	8
<b>Section I: Research Fundamentals</b>	
<b>2 Reliability and validity</b>	<b>11</b>
<i>Gerhard Bühringer and Monika Sassen</i>	
2.1 Introduction	11
2.2 Background: Reliability and validity in addiction research	11
2.3 Reliability and validity in addiction research	16
2.4 Strengthening the quality of your results and conclusions: A brief checklist to improve reliability and validity	19
2.5 Summary	24
<b>3 Sampling strategies for addiction research</b>	<b>27</b>
<i>Lisa Kakinami and Kenneth R. Conner</i>	
3.1 Introduction	27
3.2 Probability sampling	27
3.3 Non-probability sampling	32
3.4 Qualitative sampling	36
3.5 Selecting your sampling approach	37
3.6 Technical considerations	37
3.7 Conclusion	40

<b>4</b>	<b>Experimental design issues in addiction research</b>	<b>43</b>
	<i>Robert West</i>	
4.1	Introduction	43
4.2	What constitutes an experiment?	43
4.3	Is an experiment appropriate?	44
4.4	What kind of experimental design?	44
4.5	What intervention and comparison conditions?	48
4.6	What target population and recruitment strategy?	50
4.7	What sample size?	52
4.8	What outcome measures?	53
4.9	What statistical analyses?	55
4.10	Conclusions	56
<b>5</b>	<b>Qualitative methods and theory in addictions research</b>	<b>59</b>
	<i>Tim Rhodes and Ross Coomber</i>	
5.1	Introduction	59
5.2	Theory	59
5.3	A recurring debate	62
5.4	Principles for practice	63
5.5	Data generation	64
5.6	Analysis	70
5.7	Conclusions	73
<b>6</b>	<b>Ethical issues in alcohol, other drugs and addiction-related research</b>	<b>79</b>
	<i>Peter G. Miller, Adrian Carter and Wayne Hall</i>	
6.1	Introduction	79
6.2	Key concepts	79
6.3	Major ethical frameworks	80
6.4	Addiction-specific ethical issues	83
6.5	Writing an ethics application	87
6.6	Ethical processes in different countries	87
6.7	Influence of funding body	88
6.8	Ethical dissemination	89
6.9	Conclusion	89
 <b>Section II: Basic Toolbox</b>		
<b>7</b>	<b>Surveys and questionnaire design</b>	<b>97</b>
	<i>Lorraine T. Midanik and Krista Drescher-Burke</i>	
7.1	Introduction	97
7.2	Brief history	97
7.3	Survey research designs	98
7.4	Advantages and limitations of survey research designs	99
7.5	Modes of data collection	100

7.6	Questionnaire design	101
7.7	Piloting the questionnaire	104
7.8	Technological assistance	105
7.9	Common challenges	106
<b>8</b>	<b>Interviews</b>	<b>109</b>
	<i>Barbara S. McCrady, Benjamin Ladd, Leah Vermont and Julie Steele</i>	
8.1	Introduction	109
8.2	Why interviews?	109
8.3	Reliability and validity of self-reported information	110
8.4	Interviewing skills	112
8.5	Types of interviews	116
8.6	Types of interview data	118
8.7	Technological resources	120
8.8	Summary	120
<b>9</b>	<b>Scales for research in the addictions</b>	<b>127</b>
	<i>Shane Darke</i>	
9.1	Introduction	127
9.2	Screening instruments	128
9.3	Frequency of substance use	130
9.4	Multi-dimensional scales	133
9.5	Dependence	135
9.6	Psychopathology	139
9.7	Summary	143
<b>10</b>	<b>Biomarkers of alcohol and other drug use</b>	<b>147</b>
	<i>Scott H. Stewart, Anton Goldmann, Tim Neumann and Claudia Spies</i>	
10.1	Introduction	147
10.2	Uses of state biomarkers in research	147
10.3	General principles when considering biomarkers	149
10.4	Summary	156
<b>11</b>	<b>Quantitative data analysis</b>	<b>163</b>
	<i>Jim Lemon, Louisa Degenhardt, Tim Slade and Katherine Mills</i>	
11.1	Introduction	163
11.2	Imagining data – planning the study	163
11.3	Collecting data – gathering the measurements	165
11.4	Organising data – structuring the measurements	166
11.5	Describing data – what do the data look like?	167
11.6	Manipulating data	171
11.7	Relationships within the data	173
11.8	Interpreting relationships within the data	177
11.9	Conclusion and exercises	178

**Section III: Real World Research Methods**

<b>12 Applied research methods</b>	187
<i>David Best and Ed Day</i>	
12.1 Introduction	187
12.2 Auditing clinical activity in the city	189
12.3 Needs assessment	190
12.4 Qualitative research approaches	192
12.5 Evaluation research	193
12.6 The audit cycle	197
12.7 Measuring outcomes in applied settings	197
12.8 Overview and conclusions	198
<b>13 Conducting clinical research</b>	201
<i>Jalie A. Tucker and Cathy A. Simpson</i>	
13.1 Conducting clinical research	201
13.2 Discussion and conclusions: The role of the practitioner-researcher	211

**Section IV: Biological Methods**

<b>14 Psychopharmacology</b>	223
<i>Jason White and Nick Lintzeris</i>	
14.1 Introduction	223
14.2 Psychopharmacology: drugs, behaviour, physiology and the brain	223
14.3 Measuring drug effects	226
14.4 Human drug self-administration	229
14.5 Drug withdrawal and craving	231
14.6 Summary	232
<b>15 Imaging</b>	235
<i>Alastair Reid and David Nutt</i>	
15.1 Introduction	235
15.2 Introduction to neuroimaging	235
15.3 Imaging techniques	235
15.4 Image analysis	241
15.5 Some considerations when setting up an imaging study	244
<b>16 Genes, genetics, genomics and epigenetics</b>	249
<i>David Ball and Irene Guerrini</i>	
16.1 Introduction	249
16.2 Animal studies	252
16.3 Quantitative genetics	254
16.4 Molecular genetics	256
16.5 Why bother?	263
16.6 An addiction gene	263

16.7	Ethics	264
16.8	Concluding remarks	264
<b>17</b>	<b>Animal models</b>	<b>269</b>
	<i>Leigh V. Panlilio, Charles W. Schindler and Steven R. Goldberg</i>	
17.1	Introduction	269
17.2	Basic principles of behaviour: Reinforcement	269
17.3	Basic principles of behaviour: Effects of environmental cues	270
17.4	Drug self-administration: Simple schedules	270
17.5	Drug self-administration: Using dose–effect curves to assess the effects of treatments	271
17.6	Drug self-administration: Measuring the reinforcing effects of drugs	271
17.7	Drug self-administration: Modelling the effects of environmental cues with second-order schedules	273
17.8	Drug self-administration: Reinstatement	275
17.9	Drug self-administration: Modelling the uncontrolled and compulsive nature of addiction	275
17.10	Intracranial drug self-administration and intracranial electrical self-stimulation	276
17.11	Drug self-administration: Advantages and disadvantages	278
17.12	Conditioned place preference	278
17.13	Drug discrimination	279
17.14	Locomotor activity	279
17.15	Adjunct procedures	281
17.16	Integration of behavioural and neuroscience techniques	281
 <b>Section V: Specialist Methods</b>		
<b>18</b>	<b>Understanding contexts: Methods and analysis in ethnographic research on drugs</b>	<b>287</b>
	<i>Jeremy Northcote and David Moore</i>	
18.1	Introduction	287
18.2	Tracing the history of ethnographic drug research	288
18.3	Designing ethnographic research	289
18.4	Getting started	290
18.5	Collecting data	292
18.6	Analysing ethnographic data	293
18.7	Producing ethnographic texts	294
18.8	Conclusion	295
<b>19</b>	<b>Epidemiology</b>	<b>299</b>
	<i>Mark Stoové and Paul Dietze</i>	
19.1	Introduction	299
19.2	Origins of epidemiology	299
19.3	Definitions and uses of epidemiology in alcohol and other drug research	299
19.4	Descriptive epidemiology	300
19.5	Epidemiological research designs	301

19.6	Analysis of case-control and cohort studies	308
19.7	Experimental study designs	310
19.8	Potential sources of error in epidemiology	311
19.9	Summary	314
<b>20</b>	<b>Meta-analysis: Summarising findings on addiction intervention effects</b>	<b>319</b>
	<i>John W. Finney and Anne Moyer</i>	
20.1	Introduction	319
20.2	Overview of meta-analytic methods	319
20.3	Issues in meta-analyses of addiction interventions	327
20.4	Limitations	331
20.5	Conclusion	331
<b>21</b>	<b>Drug trend monitoring</b>	<b>337</b>
	<i>Paul Griffiths and Jane Mounteney</i>	
21.1	Introduction	337
21.2	Point of departure – divergent policy perspectives, difficulties in definition and temporal relevance	337
21.3	International, national and local drug monitoring mechanisms	338
21.4	Challenges in monitoring illicit drug use	339
21.5	An overview of common information sources and some of their limitations	341
21.6	Issues for the interpretation and analysis of data	345
21.7	Mixed methods	347
21.8	Triangulation	347
21.9	Reliability and validity	348
21.10	Reflections in a broken mirror: Pragmatic and imperfect solutions to an intractable problem	349
<b>22</b>	<b>Drug policy research</b>	<b>355</b>
	<i>Jonathan P. Caulkins and Rosalie Liccardo Pacula</i>	
22.1	Introduction	355
22.2	Methods for quantitatively comparing an intervention's benefits and costs	356
22.3	Issues that arise in quantifying an intervention's benefits and costs	360
22.4	Methods for estimating an intervention's effects	362
22.5	Modelling methods	365
22.6	Summary	366
 <b>Section VI: Beyond Research</b>		
<b>23</b>	<b>Concluding remarks</b>	<b>375</b>
	<i>Peter G. Miller, John Strang and Peter M. Miller</i>	
23.1	Publishing addiction science	375
23.2	Final thoughts	376
	<i>Index</i>	<b>377</b>
