Acknowledgements	vii
Acronyms and abbreviations	ix
Overview	xi
1. Introduction	1
1.1 Prioritizing medical devices: setting the scene	2
1.2 The Priority Medical Devices project	3
1.3 The mismatch	3
1.4 This report	4
2. Medical devices	7
2.1 Medical devices: what's in a name?	8
2.2 Past, present, and future	9
2.2.1 Recent key trends	9
2.2.2 Future trends	10
2.3 Assistive products	11
2.4 Pharmaceuticals and medical devices: similarities and differences	12
2.4.1 Access to essential medicines	12
2.4.2 Access to appropriate medical devices	12
2.5 The medical device market	14
2.6 Medical device regulation	16
2.7 An introduction to medical device innovation	18
2.7.1 Applying non-medical innovation to health care	19
3. Public health needs	21
3.1 A health-based approach to choosing medical devices	22
3.2 Identifying current and future public health needs	22
3.2.1 Disability	25
3.2.2 Global trends	26
3.3 Public health: the missing research target	28
3.3.1 Drivers of research	28
3.4 The gap	31

4. Priority Medical Devices project: methods used	33
4.1 Methodology	34
4.1.1 Identifying key medical devices in high-burden diseases	34
4.1.2 Identifying the medical device gap	34
4.2 Results	35
4.2.1 Identifying key medical devices in high-burden diseases	35
4.2.2 Identifying the medical device gaps	39
4.3 Identifying key assistive products for high-burden diseases	40
5. Medical devices: problems and possible solutions	43
5.1 Choosing medical devices	44
5.1.1 Barriers to choosing medical devices	44
5.1.2 Possible solutions to overcoming these barriers	50
5.2 Using medical devices	53
5.2.1 Barriers to using medical devices	53
5.2.2 Overcoming barriers to using medical devices	59
5.3 Medical device innovation	61
5.3.1 Barriers to innovation	61
5.3.2 Barriers to appropriate innovation uptake	63
5.3.3 Overcoming the barriers to medical innovation	63
5.4 Assistive devices	65
5.5 Emerging themes	66
5.5.1 Applying the 4 As to medical devices and medical interventions	66
6. Towards appropriate medical devices: options for future research	77
6.1 Methodology	78
6.2 Results	78
6.2.1 Scoping exercise	78
6.3 Future research areas in cross-cutting areas	78
6.3.1 Study design and clinical outcome	78
6.3.2 Laboratory diagnostic tools	79
6.3.3 Telemedicine and labour-saving technologies	81
6.3.4 Safe injections	82
6.4 Future research areas in global high-burden diseases	84
6.4.1 Perinatal conditions	84
6.4.2 Lower respiratory tract infections	85
6.4.3 Unipolar depressive disorders	86
6.4.4 Ischaemic heart disease	86

6.4.5 Cerebrovascular disease (stroke)	87
6.4.6 HIV/AIDS	89
6.4.7 Road traffic accidents	90
6.4.8 Tuberculosis	91
6.4.9 Malaria	92
6.4.10 Chronic obstructive pulmonary disease	93
6.4.11 Cataract	94
6.4.12 Hearing loss	95
6.4.13 Alcohol use disorders	96
6.4.14 Diabetes mellitus	97
6.5 Future trends in high-burden diseases	98
6.5.1 Alzheimer disease and other dementias	98
6.5.2 Cancer (malignant neoplasms)	99
6.5.3 Osteoarthritis	100
6.6 A possible way forward	101
References	103
Glossary	115
Annex 1 List of background papers and methods used in preparing the report	119
1. A stepwise approach to identifying gaps in medical devices (Availability Matrix and survey methodology)	
2. Building bridges between diseases, disabilities and assistive devices: linking the GBD, ICF and ISO 9999	
3. Clinical evidence for medical devices: regulatory processes focusing on Europe and the United States of America	
4. Increasing complexity of medical devices and consequences for training and outcome of care	
5. Context dependency of medical devices	
6. Barriers to innovation in the field of medical devices	
7. Trends in medical technology and expected impact on public health	
8. Future public health needs: commonalities and differences between high- and low-resource settings	
Annex 2 Conflict of interest statement	121
Annex 3 Steering bodies of the Priority Medical Devices project	123
