# DYE-SENSITIZED SOLAR CELLS

---

Edited by K. Kalyanasundaram

EPFL Press  
Distributed by CRC Press

# CONTENTS

PREFACE . . . . .	xvii
1 PHOTOCHEMICAL AND PHOTOELECTROCHEMICAL APPROACHES TO ENERGY CONVERSION . . . . .	1
<i>K. Kalyanasundaram</i>	
1.1 The sun as an abundant energy resource. . . . .	1
1.2 Photochemical conversion and storage of solar energy (artificial photosynthesis) . . . . .	2
1.3 Photographic sensitization. . . . .	5
1.4 Photoelectrochemical conversion of solar energy . . . . .	6
1.4.1 Photogalvanic cells. . . . .	6
1.4.2 Generations of photovoltaic solar cells. . . . .	7
1.4.3 Photoelectrochemical solar cells with liquid junctions . . .	11
1.4.4 Photoredox reactions of colloidal semiconductors and particulates. . . . .	14
1.5 Dye sensitization of semiconductors . . . . .	16
1.5.1 Dye sensitization of bulk semiconductor electrodes . . . . .	16
1.5.2 Dye-sensitized solar cells – an overview. . . . .	17
1.5.3 Sequence of electron-transfer steps of a DSC . . . . .	18
1.5.4 Key efficiency parameters of a DSC . . . . .	19
1.5.5 Key components of the DSC . . . . .	21
1.5.6 Quasi-solid state DSCs with spiro-OMeTAD . . . . .	32
1.5.7 Improvement in efficiency through the nanostructuring of materials . . . . .	33
1.5.8 Dye solar cells based on nanorods/nanotubes and nanowires . . . . .	34
1.5.9 Sensitization using quantum dots . . . . .	35
1.5.10 Semiconductor-sensitized ETA solar cells . . . . .	36
1.5.11 DSCs based on <i>p</i> -type semiconductor . . . . .	37
1.6 Conclusions . . . . .	38
1.7 References . . . . .	38
2 TITANIA IN DIVERSE FORMS AS SUBSTRATES . . . . .	45
<i>Ladislav Kavan</i>	
2.1 Titania: fundamentals . . . . .	45

2.2	Electrochemistry of titania: depletion regime . . . . .	48
2.2.1	Photoelectrochemistry under band-gap excitation . . . . .	49
2.2.2	In-situ FTIR spectroelectrochemistry in the depletion regime . . . . .	52
2.2.3	Photoelectrochemistry under sub-band-gap excitation. . . . .	52
2.3	Electrochemistry of titania: accumulation regime . . . . .	55
2.3.1	Capacitive processes . . . . .	56
2.3.2	Li-insertion electrochemistry. . . . .	57
2.3.3	Spectroelectrochemistry of titania in the accumulation regime . . . . .	59
2.4	Titania photoanode for dye sensitized solar cells . . . . .	60
2.4.1	Non-organized titania made by decomposition of Ti(IV) alkoxides . . . . .	61
2.4.2	Electrochemical deposition of titania . . . . .	62
2.4.3	Aerosol pyrolysis. . . . .	63
2.4.4	Organized nanocrystalline titania . . . . .	64
2.4.5	Single-crystal anatase electrode . . . . .	71
2.4.6	Other methods of producing titania electrodes for DSC . . . . .	73
2.4.7	Multimodal structures . . . . .	74
2.5	Conclusion . . . . .	76
2.6	Acknowledgements . . . . .	76
2.7	References . . . . .	76

### 3 MOLECULAR ENGINEERING OF SENSITIZERS FOR CONVERSION OF SOLAR ENERGY INTO ELECTRICITY . . . . . 83

*Jun-ho Yum and Md. K. Nazeeruddin*

3.1	Introduction . . . . .	83
3.2	Ruthenium Sensitizers . . . . .	84
3.2.1	Effect of protons carried by the sensitizers on the performance . . . . .	85
3.2.2	Effect of cations in the ruthenium sensitizers on the performance . . . . .	86
3.2.3	Device stability. . . . .	88
3.2.4	Effect of alkyl chains in the sensitizer on the performance . . . . .	89
3.2.5	Effect of the $\pi$ -conjugation bridge between carboxylic acid groups and the ruthenium chromophore . . . . .	92
3.2.6	High Molar Extinction Coefficient Sensitizers. . . . .	96
3.2.7	Tuning spectral response by thiocyanato ligands . . . . .	99
3.2.8	Non-thiocyanato ruthenium complexes . . . . .	101
3.3	Organic sensitizers. . . . .	102
3.3.1	High efficiency organic sensitizers. . . . .	102
3.3.2	Near-IR absorbing sensitizers . . . . .	109
3.4	References . . . . .	113

4	OPTIMIZATION OF REDOX MEDIATORS AND ELECTROLYTES . . . . .	117
	<i>Ke-jian Jiang and Shozo Yanagida*</i>	
4.1	Introduction . . . . .	117
4.2	Charge transfer processes in DSCs . . . . .	118
4.3	Electrolyte components and their roles in the DSCs . . . . .	121
	4.3.1 Organic solvents . . . . .	121
	4.3.2 Cations . . . . .	121
	4.3.3 Additives . . . . .	123
	4.3.4 Electron mediators . . . . .	125
4.4	Ionic liquid, quasi-solid and solid electrolytes . . . . .	128
	4.4.1 Ionic liquid electrolyte . . . . .	128
	4.4.2 Active iodide molten salts . . . . .	132
	4.4.3 Nonactive iodide molten salts . . . . .	135
	4.4.4 Additives in ILEs . . . . .	139
	4.4.5 Quasi-solid electrolyte . . . . .	139
4.5	Remarks and prospects . . . . .	141
4.6	References . . . . .	142
5	PHOTOSENSITIZATION OF SnO <sub>2</sub> AND OTHER OXIDES . . . . .	145
	<i>Prashant V. Kamat</i>	
5.1	Dependence of the Sensitization Efficiency on the Energy Difference . . . . .	146
5.2	Coupled Semiconductor Systems . . . . .	147
5.3	SnO <sub>2</sub> -C <sub>60</sub> -Ru(bpy) <sub>3</sub> <sup>2+</sup> System . . . . .	149
5.4	Probing the Interaction of an Excited State Sensitizer with the Redox Couple. . . . .	151
5.5	Sensitization of Nanotube Arrays . . . . .	153
5.6	Charge Separation of Organic Clusters at an SnO <sub>2</sub> Electrode Surface . . . . .	154
5.7	Concluding Remarks. . . . .	156
5.8	Acknowledgements . . . . .	156
5.9	References . . . . .	156
6	SOLID-STATE DYE-SENSITIZED SOLAR CELLS INCORPORATING MOLECULAR HOLE-TRANSPORTERS . . . . .	163
	<i>Henry J. Snaith</i>	
6.1	Introduction . . . . .	163
6.2	Spiro-OMeTAD-based solid-state dye-sensitized solar cell . . . . .	165
6.3	The influence of additives upon the solar cell performance . . . . .	166
6.4	Charge generation: Electron Transfer . . . . .	168
6.5	Reductive quenching. . . . .	171
6.6	Charge generation: Hole-transfer . . . . .	171
6.7	Charge transport in molecular hole-transporters. . . . .	174
6.8	Hole mobility in spiro-OMeTAD . . . . .	175

6.9	Influence of charge density on the hole-mobility in molecular semiconductors . . . . .	175
6.10	The influence of chemical p-doping upon conductivity and hole-mobility. . . . .	177
6.11	The influence of ionic salts on conductivity and hole-mobility . . .	180
6.12	Current collection . . . . .	181
6.13	TiO <sub>2</sub> pore filling with molecular hole-transporters . . . . .	187
6.14	Charge recombination: The influence of additives. . . . .	192
6.15	Charge recombination: Ion solvation and immobilization . . . . .	193
6.16	Charge recombination: Controlling the spatial separation of electrons and holes at the heterojunction . . . . .	194
6.17	Enhancing light capture in solid-state DSCs. . . . .	195
6.18	Alternative structures for mesoporous and nanostructured electrodes in solid-state DSCs . . . . .	198
6.19	Outlook for hole-transporter based solid-state DSCs . . . . .	203
6.20	References . . . . .	203
7	<b>PACKAGING, SCALE-UP AND COMMERCIALIZATION OF DYE SOLAR CELLS.</b> . . . .	207
	<i>Hans Desilvestro, Michael Bertoz*, Sylvia Tulloch and Gavin Tulloch</i>	
7.1	Introduction . . . . .	207
7.2	From cells to panels . . . . .	211
	7.2.1 Definitions . . . . .	211
	7.2.2 Designs . . . . .	211
	7.2.3 Materials . . . . .	214
	7.2.4 Module performance - experiment vs. modeling. . . . .	218
7.3	Long-term stability - the key to industrial success . . . . .	224
	7.3.1 Single cells . . . . .	224
	7.3.2 Modules . . . . .	228
	7.3.3 Panels. . . . .	230
7.4	Scaling up to commercial production levels. . . . .	231
	7.4.1 Material costs and availability . . . . .	231
	7.4.2 Manufacturing . . . . .	237
7.5	Commercial applications . . . . .	240
7.6	Conclusions . . . . .	245
7.7	Acknowledgements . . . . .	246
7.8	References . . . . .	246
8	<b>HOW TO MAKE HIGH-EFFICIENCY DYE-SENSITIZED SOLAR CELLS.</b> . . . .	251
	<i>Seigo Ito</i>	
8.1	Introduction . . . . .	251
8.2	Experimental considerations. . . . .	252
	8.2.1 Preparation of screen-printing pastes. . . . .	252
	8.2.2 Synthesis of Ru-dye . . . . .	253

8.2.3	Porous-TiO <sub>2</sub> electrodes . . . . .	254
8.2.4	Counter-Pt electrodes . . . . .	258
8.2.5	DSC assembling . . . . .	258
8.2.6	Measurements . . . . .	260
8.3	Results and discussion . . . . .	260
8.3.1	TiCl <sub>4</sub> treatments . . . . .	260
8.3.2	Effect of the light-scattering TiO <sub>2</sub> layer . . . . .	262
8.3.3	Thickness of the nanocrystalline TiO <sub>2</sub> layer . . . . .	263
8.3.4	Anti-reflecting film . . . . .	263
8.3.5	Reproducibility of DSC photovoltaics . . . . .	264
8.4	Conclusion . . . . .	265
8.5	Acknowledgements . . . . .	266
8.6	References . . . . .	266

9 SCALE-UP AND PRODUCT-DEVELOPMENT STUDIES OF DYE-SENSITIZED SOLAR CELLS IN ASIA AND EUROPE . . . . . 267

*K. Kalyanasundaram, Seigo Ito, Shozo Yanagida and Satoshi Uchida*

9.1	Introduction . . . . .	267
9.2	Scaling up of laboratory cells to modules and panels . . . . .	268
9.3	DSC development studies in various European laboratories . . . . .	271
9.3.1	Energy Research Centre of the Netherlands (ECN) . . . . .	271
9.3.2	Fraunhofer-Institute for Solar Energy Systems (Fraunhofer ISE) . . . . .	273
9.3.3	G24 Innovation . . . . .	278
9.3.4	3GSolar, Israel . . . . .	280
9.4	DSC development studies in various laboratories of Japan . . . . .	281
9.4.1	Aisin Seiki Co. Ltd. and Toyota Central R&D Laboratories . . . . .	281
9.4.2	Fujikura Ltd. (Japan) . . . . .	287
9.4.3	Peccell Technologies, Inc. (Japan) . . . . .	290
9.4.4	Sharp Co. Ltd. (Japan) . . . . .	293
9.4.5	Sony Corporation Ltd. (Japan) . . . . .	295
9.4.6	Shimane Institute for Industrial Technology (Japan). . . . .	296
9.4.7	TDK Co., Ltd. (Japan) . . . . .	297
9.4.8	Eneos Co. Ltd. (Japan) . . . . .	300
9.4.9	NGK Spark Plug Co., Ltd. (Japan). . . . .	301
9.4.10	Panasonic Denko Co. Ltd. (Japan) . . . . .	303
9.4.11	Taiyo Yuden Co., Ltd. (Japan) . . . . .	305
9.4.12	Dai Nippon Printing Company . . . . .	306
9.4.13	Mitsubhishi Paper Mills and Sekisui Jushi Corporation . . . . .	306
9.4.14	J-Power Co. Ltd. (Japan). . . . .	308
9.5	DSC Development Work in Korea and Taiwan . . . . .	308
9.5.1	Korean Institute of Science and Technology (KIST). . . . .	308
9.5.2	Electronics and Telecommunications Research	

	Institute(ETRI), Korea . . . . .	311
9.5.3	Samsung SDI, Korea . . . . .	311
9.5.4	Industrial Technology Research Institute of Taiwan (ITRI) . . . . .	312
9.5.5	J Touch Taiwan . . . . .	313
9.6	DSC development work in Australia and China. . . . .	313
9.6.1	Dyesol, Australia . . . . .	313
9.6.2	Institute of Plasma Physics, Chinese Academy of Sciences . . . . .	317
9.7	Conclusion . . . . .	318
9.8	Acknowledgement . . . . .	319
9.9	References . . . . .	319

10	<b>CHARACTERIZATION AND MODELING OF DYE-SENSITIZED SOLAR CELLS: A TOOLBOX APPROACH . . . . .</b>	<b>323</b>
	<i>Anders Hagfeldt and Laurence Peter</i>	
10.1	Introduction . . . . .	323
10.2	Theoretical background . . . . .	324
10.2.1	Interfacial electron transfer processes in the DSC . . . . .	324
10.2.2	Electron trapping in the DSC. . . . .	328
10.2.3	Electron transport in the DSC . . . . .	331
10.3	The toolbox . . . . .	336
10.3.1	Determination of injection efficiency and electron diffusion length under steady-state conditions . . . . .	336
10.3.2	Electrochemical and spectroelectrochemical techniques to study the energetics of the oxide/dye/electrolyte interface . . . . .	342
10.3.3	Electrochemical measurements with thin layer cells. . . . .	354
10.3.4	Small-amplitude time-resolved methods. . . . .	357
10.3.5	Methods based on frequency response analysis . . . . .	362
10.3.6	Photovoltage decay. . . . .	374
10.3.7	Determination of density of trapped electrons in DSCs. . . . .	376
10.3.8	Measuring the internal electron quasi Fermi level in the DSC . . . . .	383
10.3.9	Determining the electron diffusion length using IMVS and IMPS . . . . .	386
10.3.10	Photoinduced absorption spectroscopy (PIA). . . . .	388
10.3.11	Conclusions . . . . .	395
10.4	Acknowledgments . . . . .	396
10.5	Appendix 1 Analytical IMPS solutions . . . . .	396
10.6	Appendix 2 Numerical solutions of the continuity equation [10.115] . . . . .	397
10.7	References . . . . .	399

11	DYNAMICS OF INTERFACIAL AND SURFACE ELECTRON TRANSFER PROCESSES . . . . .	403
	<i>Jacques-E. Moser</i>	
11.1	Introduction . . . . .	403
11.2	Energetics of charge transfer reactions . . . . .	406
	11.2.1 Mesoscopic metal oxide semiconductors . . . . .	406
	11.2.2 Dye sensitizer. . . . .	414
11.3	Kinetics of interfacial electron transfer . . . . .	416
	11.3.1 Charge injection dynamics . . . . .	416
	11.3.2 Charge recombination . . . . .	430
11.4	Electron transfer dynamics involving the redox mediator. . . . .	440
	11.4.1 Kinetics of interception of dye cations by a redox mediator . . . . .	441
	11.4.2 Conduction band electron – oxidized mediator recombination . . . . .	449
	11.4.3 Electron transport in nanocrystalline TiO <sub>2</sub> films . . . . .	450
11.5	References . . . . .	453
12	IMPEDANCE SPECTROSCOPY: A GENERAL INTRODUCTION AND APPLICATION TO DYE-SENSITIZED SOLAR CELLS . . . . .	457
	<i>Juan Bisquert and Francisco Fabregat-Santiago</i>	
12.1	Introduction . . . . .	457
12.2	A basic solar cell model . . . . .	461
	12.2.1 The ideal diode model . . . . .	461
	12.2.2 Physical origin of the diode equation for a solar cell . . . . .	463
12.3	Introduction to IS methods. . . . .	466
	12.3.1 Steady state and small perturbation quantities . . . . .	467
	12.3.2 The frequency domain . . . . .	469
	12.3.3 Simple equivalent circuits . . . . .	470
12.4	Basic physical model and parameters of IS in solar cells . . . . .	480
	12.4.1 Simplest impedance model of a solar cell . . . . .	480
	12.4.2 Measurements of electron lifetimes . . . . .	486
12.5	Basic physical models and parameters of IS in dye-sensitized solar cells . . . . .	486
	12.5.1 Electronic processes in a DSC . . . . .	486
	12.5.2 The capacitance of electron accumulation in a DSC. . . . .	488
	12.5.3 Recombination resistance . . . . .	491
	12.5.4 The transport resistance . . . . .	500
12.6	Transmission line models . . . . .	508
	12.6.1 General structure of transmission lines. . . . .	508
	12.6.2 General diffusion transmission lines . . . . .	512
	12.6.3 Diffusion-recombination transmission line . . . . .	515
	12.6.4 Parameters of the diffusion-recombination model . . . . .	519
	12.6.5 Effect of boundaries on the transmission line . . . . .	520

12.7	Applications . . . . .	523
12.7.1	Liquid electrolyte cells . . . . .	523
12.7.2	Experimental IS parameters of DSCs . . . . .	526
12.7.3	Nanotubes . . . . .	540
12.7.4	Effects of the impedance parameters on the j-V curves . . . . .	543
