

Pedestrian facilities

Engineering and geometric design

Contents

Preface	xiii
Acknowledgements	xix
Introduction	1
The need for improved pedestrian facilities	1
Information sources	5
Definitions of terms	8
Analysis and design of pedestrian facilities: definitions	10
Pedestrian facilities analysis and design process	12
Legal framework	14
Monitoring the pedestrian environment	14
Areas of potential improvement to analysis and design of pedestrian facilities	15
The context: quality of the pedestrian experience	19
Summary and conclusions	19
References	20
Appendix A: a legal framework (MfS, DfT 2007)	21
1 Codes of conduct – <i>The Highway Code</i>	27
Highway user operations: <i>The Highway Code</i>	27
Objectives and practice	28
Highway Code rules	29
Status of <i>The Highway Code</i> and application to geometric design	37
Summary	39
References	39
2 Driver and vehicle characteristics	40
Parameters describing driver and vehicle characteristics	40
Vehicle speed	41
Stopping sight distance	48
	vii

Driver's viewpoint	60
Vehicle dimensions	62
Summary	62
References	63
3 Pedestrian characteristics	65
Design emphasis	65
Pedestrian categories	66
Pedestrian dimensions	66
Pedestrians' crossing behaviour under vehicular traffic conditions	68
The pedestrian's crossing process	73
Pedestrian observation–reaction time	74
Pedestrians' crossing speeds and times	84
Safety margin time	85
Future research needs	88
Summary	89
References	89
4 Disabled pedestrians' characteristics	92
Background	92
Overview of major elements in the crossing process	94
Crossing the carriageway	100
Crossing characteristics of people with sensory impairments	103
Analysis and design of the total crossing	105
Summary and conclusions	107
References	109
5 General road layout practice	111
Design principles and approaches	111
Trunk and other high vehicular traffic roads	113
Residential streets	117
Summary	127
References	128
6 Crossings at unsignalled locations	130
Driver and pedestrian tasks at junctions	130
Visibility considerations	136
Crossings at priority junctions: trunk roads	139
Priority junctions in residential areas: DB 32 (DOE 1992)	145
Junctions at residential streets: MfS	150
Other crossing devices	153

Stand-alone crossings	158
Shared space schemes	164
Review of options in improving crossings for pedestrians	166
Summary	169
References	170
7 Signalled pedestrian crossings – geometric design	172
Geometric design and signalisation	172
Criteria for provision of signalled crossings	173
Signal-controlled crossings: types and components	174
Geometric design of signalled crossings	176
Influence of urban traffic control systems on geometric design of signalled crossings	184
Puffin pedestrian crossings: nearside pedestrian signals (TAL 5/05 (dFt 2005) and LTN 2/95)	185
Summary	193
References	194
8 Facilities for inclusive mobility: design guidelines	195
Information sources	195
Legislation – Disability Discrimination Act (DDA) 1995, amended 2003	196
Human factors	196
Footway and related dimensions	196
Tactile paving surfaces	205
Transfer to and from other modes of transport	206
Shared surface street design	212
Executive summary – concerns with shared surfaces	213
Summary	215
References	215
9 Pedestrian facilities at roundabouts	217
General	217
Objectives	218
Types of roundabouts	220
Siting of roundabouts	221
Road users' specific requirements	223
Design hierarchy	226
Geometric design – pedestrian aspects	226
Summary	229
References	229

10 Pedestrian facilities at mini-roundabouts	230
General	230
Scope	230
Siting and use of mini-roundabouts	231
Feasibility of mini-roundabouts	234
Road users' specific requirements	235
Geometric design features	237
Summary	240
References	241
11 Design for combined pedestrian and other non-motorised users	242
Geometric design of pedestrian, cycle and equestrian routes (TA 90/05, HA/DfT 1992)	242
Provision and cross-sections of subways	255
Crossings on trunk roads	263
Summary	268
References	269
12 Audits for non-motorised user (NMU) facilities	271
Background	271
Basis for audits	272
Objectives and procedures	273
NMU characteristics	276
The NMU audit process	277
Guidance and prompts in the auditing process	281
Audits for residential streets	284
Summary	286
References	286
13 Pedestrian flow and capacity: the highway capacity manual	288
Introduction	288
Concepts of pedestrian flow	288
Methodology	301
Applications	312
Summary	314
References	314

14 Simulation and computerised models of pedestrian facilities	316
VISSIM	318
Ped ISI and Bike ISI	321
Legion	327
Summary	332
References	332
15 Examples and case studies	333
Background	333
Example 1: crossing at unsignalled trunk road and entrance to residential street of a medium-sized town	333
Example 2: signalled pedestrian crossing of an inner city road adjacent to a pedestrianised area	336
Example 3: replacement of staggered signalled crossing with straight across crossing	340
Example 4: context report for non-motorised user audit of preliminary design stage	344
Summary	349
References	350
Index	351
