

Voluntary feed intake in pigs

edited by: David Torrallardona and Eugeni Roura

Table of contents

Preface	11
1. Voluntary feed intake and pig breeding	13
<i>P.W. Knap</i>	
Abstract	13
Introduction	13
Feed intake in growing pigs: past developments	14
Feed intake in growing pigs: new developments	22
Feed intake in sows	26
Acknowledgements	31
References	31
2. Voluntary feed intake in piglets: potential impact of early experience with flavours derived from the maternal diet	37
<i>J.E. Bolhuis, M. Oostindjer, H. Van den Brand, W.J.J. Gerrits and B. Kemp</i>	
Abstract	37
Introduction and outline	37
The low voluntary feed intake around weaning and its consequences	38
The role of social information transmission in the ontogeny of feeding	39
Perinatal exposure to flavours derived from the gestating and lactating mother's diet	41
Role of social information transfer in feeding behaviour of pigs	48
Concluding remarks and implications	51
References	52
3. Integration of pre- and post-absorptive factors in feed intake regulation and prediction with particular respect to the pig	61
<i>J.M. Forbes</i>	
Abstract	61
Introduction	61
Preingestional	62
Postingestional	65
Postabsorptive	69
Integration	72
Minimal total discomfort (MTD)	75
Variability in intake and selection	82
Conclusions	84
References	84
4. Taste receptor biology	87
<i>K.C. Klasing and B.D. Humphrey</i>	
Abstract	87
Overview of taste biology	87
Taste receptors	89

Table of contents

Signal transduction	93
Tissue expression	94
Knockouts and transgenics	94
<i>Physiological tuning</i>	95
Evolution	95
Applications in animal agriculture	97
References	99
 5. Feed appetite in pigs: an oronasal sensing perspective	 105
<i>E. Roura and G. Tedó</i>	
Abstract	105
Introduction	105
Peripheral sensing in pigs	105
Somatosensing	107
Olfaction/smell	110
Taste/gustation	116
<i>The comparative oronasal sensing biology of the pig</i>	124
The concept of palatability in pigs - feed appetite and feed intake - practical applications in swine nutrition	128
References	132
 6. The diffuse chemosensory system	 141
<i>A. Sbarbati, D. Benati and F. Merigo</i>	
Abstract	141
Introduction	141
The diffuse chemosensory system	142
Considerations about the role of the DCS	145
Conclusions	149
References	150
 7. Hormonal control of feed intake in swine	 155
<i>J.A. Carroll and G.L. Allae</i>	
Abstract	155
Introduction	155
Feed intake and the somatotrophic axis	157
Stimulators of appetite	162
Appetite suppressors	169
A potential role for glucorticoids on neonatal pig growth and feed intake	173
Conclusion	177
Disclaimer	178
References	178

8. Metabolic regulation of feed intake in monogastric mammals	189
<i>J.L. Black, B.A. Williams and M.J. Gidley</i>	
Abstract	189
Introduction	190
Gastrointestinal tract transit time	191
Mode of action of intestinal brakes	194
Long-term control of feed intake by nutrient-stimulated GIT peptides	196
Monitoring of metabolic status and adiposity	197
Integration of metabolic control of intake	201
A unifying concept?	203
Conclusions	205
Acknowledgements	206
References	206
9. Evaluation of free-choice feedstuffs preference by pigs	215
<i>D. Torrallardona and D. Solà-Oriol</i>	
Abstract	215
Introduction	215
Measurement of feed preference	217
Preferences for different feed ingredients	221
Conclusions	236
Acknowledgements	236
References	236
10. Antinutritional factors: impact on pigs' voluntary feed intake	243
<i>L. Clasadonte and A.F.B. van der Poel</i>	
Abstract	243
Introduction	243
Protease inhibitors	245
Lectins	251
Tannins	255
Glucosinolates	258
Alkaloids	260
(Poly)saccharides	265
Saponins	267
Discussion	268
References	272
11. Feed manufacturing technology and feed intake in young pigs	277
<i>R.T. Zijlstra, S. Tibble and T.A.T.G. van Kempen</i>	
Abstract	277
Introduction	277
Selection of raw materials	278
Feed manufacturing	283
Conclusions and implications	287

Table of contents

Acknowledgements	287
References	287
12. Feeding behaviour and social influences on feed intake	293
<i>X. Manteca and S. Edwards</i>	
Abstract	293
Introduction	293
Feeder design	293
Feeding space requirement	295
Effects of group size	297
Social mixing	298
Space allowance	299
Mechanisms	301
Areas deserving further research	301
References	302
13. Anorexia during infection in mammals: variation and its sources	307
<i>I. Kyriazakis and A. Doeschl-Wilson</i>	
Abstract	307
Introduction	307
Patterns of anorexia development	308
Pathogen specific effects on anorexia	310
Nutritional environment effects on anorexia	311
Host genotype effects on anorexia	315
References	318
14. Models to predict feed intake	323
<i>J.L. Black</i>	
Abstract	323
Introduction	323
Model development	325
Concepts used to predict intake of pigs	326
Potential intake	331
Changes from potential intake	335
Conclusions	343
Acknowledgements	344
References	344
Author profiles of main authors	353
Index	357
