

INTRODUCTION TO THE

# High-Temperature Oxidation of Metals

SECOND EDITION

Neil Birks, Gerald H. Meier,  
and Frederick S. Pettit

CAMBRIDGE

# Contents

<i>Acknowledgements</i>	<i>page</i> viii
<i>Preface</i>	ix
<i>Introduction</i>	xi
1. Methods of investigation	1
2. Thermodynamic fundamentals	16
3. Mechanisms of oxidation	39
4. Oxidation of pure metals	75
5. Oxidation of alloys	101
6. Oxidation in oxidants other than oxygen	163
7. Reactions of metals in mixed environments	176
8. Hot corrosion	205
9. Erosion–corrosion of metals in oxidizing atmospheres	253
10. Protective coatings	271
11. Atmosphere control for the protection of metals during production processes	306
<i>Appendix A. Solution to Fick’s second law for a semi-infinite solid</i>	323
<i>Appendix B. Rigorous derivation of the kinetics of internal oxidation</i>	327
<i>Appendix C. Effects of impurities on oxide defect structures</i>	332
<i>Index</i>	336
