

2ND
EDITION

Alan Darbyshire

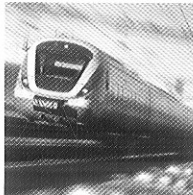

Mechanical Engineering

BTEC National Engineering Specialist Units

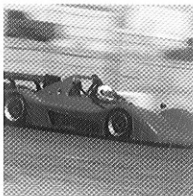

Contents

Acknowledgements	v
Introduction	vii

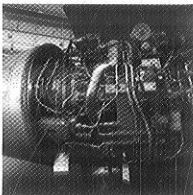

Chapter 1 Further Mechanical Principles and Applications 1

Engineering Structures	2
Engineering Components	24
Rotating Systems with Uniform Angular Acceleration	41
Moment of Inertia	48
Centripetal Acceleration and Centripetal Force	62
Simple Machines	74

Chapter 2 Advanced Mechanical Principles and Applications 93

Uni-axial and Complex Loading	94
Bending in Beams	101
Torsion in Power Transmission Shafts	111
Resultant and Relative Velocity	119
Plane Linkage Mechanisms	124
Natural Vibrations	130

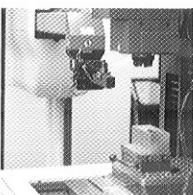

Chapter 3 Applications of Mechanical Systems and Technology 147

Lubricants and Lubrication Systems	148
Engineering Components	157
Mechanical Power Transmission Systems	171
Plant Equipment and Systems	197

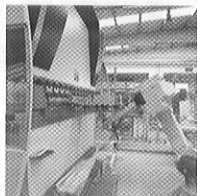

Chapter 4 Properties and Applications of Engineering Materials 215

Atomic Structure of Materials	216
Material Properties and Effects of Processing	245
Material Processing	257
Selection of Engineering Materials	265

Chapter 5 Engineering Design 283

Knowing How the Design Process Operates When Dealing with Customers	284
Understanding the Impact of Legislation, Standards and Environmental and Manufacturing Constraints on the Design Function	290
Be Able to Prepare Design Proposals That Meet the Requirements of a PDS	299
Be Able to Produce and Present a Final Design Solution	313

Chapter 6	Electro, Pneumatic and Hydraulic Systems and Devices	329
Industrial Applications		330
Legislation, Regulations and Safety Precautions		331
Fluid Power Devices		333
Fluid Power Principles		359
Maintenance of Fluid Power Systems		371
Answers		381
Index		385
