about this book xx

1 ***Introducing the iPhone and iPad*** **1**

1.1 A bit of history 2

1.2 All for one and one for all: the iPhone OS platform 2

1.3 Core hardware specifications 3

The iPhone 4 ▪ *The iPad* 4 ▪ *The iPod Touch* 4
iPhone and iPad input and output specifications 5
iPhone and iPad network specifications 5 ▪ *iPhone OS browser specifications* 6 ▪ *Mobile web standards* 8
Other hardware features 8

1.4 How the iPhone and iPad are unique 9

1.5 Understanding iPhone and iPad touch interaction 11

1.6 Summary 12

2 ***Learning Objective-C and the iPhone OS SDK*** **13**

2.1 Getting ready for the SDK 14

Installing the SDK 14 ▪ *The anatomy of the SDK* 15

2.2 Introducing Objective-C 17

The big picture 17 ▪ The message 18 ▪ Class definition 20 Properties 22 ▪ Other compiler directives 24 ▪ Categories and protocols 24 ▪ Wrapping up Objective-C 25

2.3 Introducing the iPhone OS 26

The anatomy of the iPhone OS 26 ▪ The object hierarchy of the iPhone OS 27 ▪ Windows and views 28

2.4 The iPhone OS's methods 30

Object creation 30 ▪ Memory management 32 ▪ Event response 33 ▪ Lifecycle management 34

2.5 Summary 35

3 ***Using Xcode 36***

3.1 Introducing Xcode 36

The anatomy of Xcode 37 ▪ Compiling and executing in Xcode 38

3.2 Creating a first iPhone project in Xcode: Hello, World! 39

Understanding main.m 39 ▪ Understanding the application delegate 40 ▪ Writing Hello, World! 42

3.3 Creating a first iPad project in Xcode: Hello, World! 44

Writing Hello, World! 45

3.4 Creating a new class in Xcode 45

The new class how-to 46 ▪ The header file 46 ▪ The source code file 47 ▪ Linking it in 49

3.5 Other Xcode functionality 49

Adding frameworks with Xcode 49 ▪ Using alternate templates with Xcode 50 ▪ Xcode tips and tricks 51

3.6 Summary 52

4 ***Using Interface Builder 53***

4.1 An introduction to Interface Builder 54

The anatomy of Interface Builder 54 ▪ Simulating in Interface Builder 56

4.2 A first project in Interface Builder: pictures and the web 57

Creating new objects 57 ▪ Manipulating objects graphically 58 Using the inspector window 58 ▪ Working with pictures 60

4.3 Building connections in Interface Builder 61

Declaring an IBOutlet 62 ▪ Connecting an object 62
Coding with IBOutlets 63

4.4 Other Interface Builder functionality 65

Building other connections 65 ▪ Creating external objects 65
Initializing Interface Builder objects 66 ▪ Accessing .xib files 66
Creating new .xib files 67

4.5 Summary 67

5 ***Creating basic view controllers 68***

5.1 The view controller family 69

5.2 The standard view controller 70

The anatomy of a view controller 70 ▪ Creating a view controller 71 ▪ Creating another view controller 71 ▪ Building up a view controller interface 72 ▪ Using your view controller 73

5.3 The table view controller 78

The anatomy of a table view controller 78 ▪ Creating a table view controller 78 ▪ Building up a table interface 80 ▪ Using your table view controller 85

5.4 Summary 85

6 ***Monitoring events and actions 87***

6.1 An introduction to events 88

The responder chain 88 ▪ Touches and events 89

6.2 A touching example: the event reporter 91

Setting things up in Interface Builder 92 ▪ Preparing a view for touches 93 ▪ Controlling your events 95

6.3 Other event functionality 97

Regulating events 97 ▪ Other event methods and properties 98

6.4 An introduction to actions 99

The UIControl object 99 ▪ Control events and actions 99
Using addTarget:action:forControlEvents: 101

6.5 Adding a button to an application 102

Using addTarget:action:forControlEvents: with a button 102
Using an IBAction with a button 103

6.6 Other action functionality 104

Accepting text input with UITextField 104 ▪ Allowing value selection with UISlider 106 ▪ A TextField/Slider mashup 106
Actions made easy 108 ▪ Actions in use 108

6.7 Introducing notifications 109
6.8 Summary 110

7 *Creating advanced view controllers 111*
7.1 The tab bar view controller 112
The anatomy of a tab bar view controller 112 ▪ Creating a tab bar view controller 113 ▪ Building a tab bar interface 114 Using your tab bar controller 118
7.2 The navigation controller 119
The anatomy of a navigation controller 119 ▪ Creating a navigation controller 120 ▪ Completing the navigation controller 122 ▪ Using your navigation controller 124
7.3 Using the flipside controller 127
7.4 The split view controller 129
Creating a split view controller 129 ▪ Building the split view controller 130 ▪ Using your split view controller 134 Adjusting the interface for vertical and landscape modes 135
7.5 Popover and modal view controllers 136
Creating a popover view controller 136 ▪ Creating a modal view controller 137
7.6 Summary 138

8 *Data: actions, preferences, and files 139*
8.1 Accepting user actions 140
8.2 Maintaining user preferences 141
Creating your own preferences 142 Using the system settings 147
8.3 Opening files 151
Accessing your bundle 152 ▪ Accessing other directories 153 Manipulating files 154 ▪ Filesaver: a UITextView example 155
8.4 Summary 158

9 *Data: advanced techniques 159*
9.1 Using SQLite 160
Setting up an SQLite database 160 ▪ Accessing SQLite 162 Accessing your SQLite database 162 ▪ Building a navigation menu from a database 163 ▪ Expanding this example 170

9.2 Accessing the Address Book 170

An overview of the frameworks 170 ▪ Accessing Address Book properties 171 ▪ Querying the Address Book 173 ▪ Using the Address Book UI 175

9.3 An introduction to Core Data 179

Background information about Core Data 180 ▪ Setting up Core Data in your application 180 ▪ Initializing the Core Data objects 182 ▪ Adding objects to the database 185 Fetching, updating, and deleting objects in Core Data 185

9.4 Summary 187

10 *Positioning: accelerometers, location, and the compass 188*

10.1 The accelerometers and orientation 189

The orientation property 189 ▪ The orientation notification 189

10.2 The accelerometers and movement 190

Accessing the UIAccelerometer 190 ▪ Parsing the UIAcceleration 191 ▪ Checking for gravity 191 ▪ Checking for movement 194 ▪ Recognizing simple accelerometer movement 194

10.3 The accelerometers and gestures 197

10.4 All about Core Location 199

The location classes 200 ▪ An example using location and distance 201 ▪ An example using altitude 204 ▪ Using the compass 207 ▪ Core Location and the internet 208

10.5 Summary 209

11 *Media: images and the camera 210*

11.1 An introduction to images 211

Loading a UIImage 211 ▪ Drawing a UIImageView 212 Modifying an image in the UIKit 213

11.2 Drawing simple images with Core Graphics 213

11.3 Accessing photos 215

Using the image picker 215 ▪ Taking photos 216 Saving to the photo album 217

11.4 Collage: an image example 217

The collage view controller 218 ▪ The collage temporary image view 221 ▪ The collage view 222 ▪ Further exploration of this example 223

11.5 Summary 223

12 *Media: audio and recording* 224

12.1 Playing audio from the iPod library 225

Retrieving audio items from the iPod media library 225
Getting information about an MPMediaItem 227 ▪ *Playing media items using MPMusicPlayerController* 227 ▪ *Example: creating a simple media player application* 229

12.2 Recording audio 232

Initializing the audio recorder 232 ▪ *Controlling the audio recorder* 233 ▪ *Responding to AVAudioRecorder events* 234

12.3 Playing sounds manually 234

Initializing the AVAudioPlayer 235
The AVAudioPlayerDelegate 235 ▪ *Controlling the AVAudioPlayer* 236

12.4 Example: creating a simple audio recording/playback application 237

Creating a view-based application 238 ▪ *Adding the needed frameworks* 238 ▪ *Setting up the IBActions* 238 ▪ *Creating the interface* 239 ▪ *Setting up the audio recorder and implementing the IBActions* 239

12.5 Recording, playing, and accessing video 240

12.6 Summary 242

13 *Graphics: Quartz, Core Animation, and OpenGL* 243

13.1 An introduction to Quartz 2D 244

13.2 The Quartz context 244

Drawing to a UIView 246 ▪ *Drawing to a bitmap* 247

13.3 Drawing paths 248

Finishing a path 249 ▪ *Creating reusable paths* 249
Drawing rectangles 251

13.4 Setting the graphical state 251

Setting colors 252 ▪ *Making transformations* 253
Setting clipping paths 255 ▪ *Other settings* 256
Managing the state 257

13.5 Advanced drawing in Quartz 257

Drawing gradients 257 ▪ *Drawing images* 259
Drawing words 260 ▪ *What we didn't cover* 262

13.6 Drawing on a picture: an example 262

The PhotoDraw view controller 262 ▪ The photodraw view 264 Expanding on the example 266

13.7 An introduction to Core Animation 266

The fundamentals of Core Animation 267 ▪ Getting started with Core Animation 268 ▪ Drawing a simple implicit animation 268 ▪ Drawing a simple explicit animation 269

13.8 An introduction to OpenGL 269

13.9 Summary 270

14 ***The web: web views and internet protocols 271***

14.1 The hierarchy of the internet 271

14.2 Low-level networking 272

The CFHost class 273

14.3 Working with URLs 274

Creating an NSURL 274 ▪ Building an NSURLRequest 275 Manipulating HTML data by hand 275

14.4 Using UIWebView 276

Calling up the web view 276 ▪ Managing the web view delegate 278 ▪ Thumbnails: a web view example 278

14.5 Parsing XML 280

Starting up NSXMLParser 281 ▪ Acting as a delegate 281 Building a sample RSS reader 282 ▪ Altitude redux: a Core Location example 287

14.6 POSTing to the web 289

POSTing by hand 289 ▪ Submitting forms 290

14.7 Accessing the social web 291

Using web protocols 291 ▪ Using TouchJSON 292

14.8 Summary 294

15 ***Peer-to-peer connections using Game Kit 295***

15.1 Overview of Game Kit 295

15.2 Creating peer-to-peer applications using the peer picker 296

Using Apple's built-in peer picker 296 ▪ Implementing the GKSessionDelegate methods 300 ▪ Sending and receiving data between peers 301

15.3 Example: creating a multiplayer table tennis game 303

Starting the GKTennis project 304 ▪ Creating the header file 304 ▪ Creating the table tennis interface 306 ▪ Game initialization 306 ▪ Setting up the peer picker and getting connected 307 ▪ Implementing the send and receive methods 309 ▪ The game loop 311 ▪ User interaction 314

15.4 Summary 315

16 ***Push notification services 316***

16.1 What are push notifications? 316

16.2 An overview of Apple's push notification system 318

16.3 Preparing your application to use push notifications 319

Setting up your application certificate 319 ▪ Setting up your provisioning profile 321 ▪ The code for handling push notifications 321 ▪ Preparing audio files 323

16.4 Creating a push notification provider in PHP 324

Creating the SSL certificate 324 ▪ Implementing the PHP push notification provider 326

16.5 Summary 327

17 ***The Map Kit framework 328***

17.1 Overview of Map Kit 328

17.2 Adding a map to an application 329

Adding the map using Interface Builder 329 ▪ Adding the map programmatically 330 ▪ Controlling the map 330

17.3 Reverse geocoding 332

17.4 Annotating the map 334

Adding basic map annotations 335 ▪ Adding custom map annotations 336

17.5 Summary 341

18 ***In-app purchasing using Store Kit 342***

18.1 Setting up a sandbox testing environment 343

Creating an iTunes test user 343 ▪ Adding products 344

18.2 Creating a simple store interface 347

18.3 Summary 355

19 *iPhone SDK enhancements 357*

19.1 Custom keyboard accessories 358

Extending UITextField 358 ▪ Implementing the custom UITextField 360 ▪ Custom keyboards 361

19.2 Going forward: the iPhone 4.0 SDK 362

Multitasking 363 ▪ User experience enhancements 364 Multimedia framework enhancements 365 ▪ Game Center 365

19.3 Summary 365

appendix A iPhone OS class reference 367
appendix B External sources and references 371
appendix C Publishing your SDK program 373
appendix D Updating current applications for the iPad 376

index 383
