CONTENTS

1 INTRODUCTION 1

1.1 Historical Background 2
1.2 Classical, Matrix, and Finite-Element Methods of Structural Analysis 3
1.3 Flexibility and Stiffness Methods 4
1.4 Classification of Framed Structures 5
1.5 Analytical Models 10
1.6 Fundamental Relationships for Structural Analysis 12
1.7 Linear versus Nonlinear Analysis 20
1.8 Software 21
Summary 21

2 MATRIX ALGEBRA 23

2.1 Definition of a Matrix 24
2.2 Types of Matrices 25
2.3 Matrix Operations 27
2.4 Gauss–Jordan Elimination Method 38
Summary 45
Problems 46

3 PLANE TRUSSES 48

3.1 Global and Local Coordinate Systems 49
3.2 Degrees of Freedom 52
3.3 Member Stiffness Relations in the Local Coordinate System 58
3.4 Finite-Element Formulation Using Virtual Work 67
3.5 Coordinate Transformations 76
3.6 Member Stiffness Relations in the Global Coordinate System 85
3.7 Structure Stiffness Relations 89
3.8 Procedure for Analysis 105
Summary 122
Problems 123

4 COMPUTER PROGRAM FOR ANALYSIS OF PLANE TRUSSES 128

4.1 Data Input 129
4.2 Assignment of Structure Coordinate Numbers 140
4.3 Generation of the Structure Stiffness Matrix 143
4.4 Formation of the Joint Load Vector 148
4.5 Solution for Joint Displacements 150

4.6 Calculation of Member Forces and Support Reactions 152
Summary 159
Problems 161

5 BEAMS 162
5.1 Analytical Model 163
5.2 Member Stiffness Relations 171
5.3 Finite-Element Formulation Using Virtual Work 185
5.4 Member Fixed-End Forces Due to Loads 191
5.5 Structure Stiffness Relations 197
5.6 Structure Fixed-Joint Forces and Equivalent Joint Loads 206
5.7 Procedure for Analysis 214
5.8 Computer Program 224
Summary 245
Problems 245

6 PLANE FRAMES 249
6.1 Analytical Model 250
6.2 Member Stiffness Relations in the Local Coordinate System 256
6.3 Coordinate Transformations 268
6.4 Member Stiffness Relations in the Global Coordinate System 276
6.5 Structure Stiffness Relations 284
6.6 Procedure for Analysis 299
6.7 Computer Program 317
Summary 334
Problems 335

7 MEMBER RELEASES AND SECONDARY EFFECTS 340
7.1 Member Releases in Plane Frames and Beams 341
7.2 Computer Implementation of Analysis for Member Releases 361
7.3 Support Displacements 362
7.4 Computer Implementation of Support Displacement Effects 385
7.5 Temperature Changes and Fabrication Errors 390
Summary 410
Problems 411

8 THREE-DIMENSIONAL FRAMED STRUCTURES 417
8.1 Space Trusses 418
8.2 Grids 433
8.3 Space Frames 456
Summary 494
Problems 494

9 SPECIAL TOPICS AND MODELING TECHNIQUES 499

9.1 The Structure Stiffness Matrix Including Restrained Coordinates—An Alternative Formulation of the Stiffness Method 500
9.2 Approximate Matrix Analysis of Rectangular Building Frames 506
9.3 Condensation of Degrees of Freedom, and Substructuring 514
9.4 Inclined Roller Supports 530
9.5 Offset Connections 533
9.6 Semirigid Connections 537
9.7 Shear Deformations 541
9.8 Nonprismatic Members 545
9.9 Solution of Large Systems of Stiffness Equations 553
Summary 568
Problems 569

10 INTRODUCTION TO NONLINEAR STRUCTURAL ANALYSIS 572

10.1 Basic Concept of Geometrically Nonlinear Analysis 574
10.2 Geometrically Nonlinear Analysis of Plane Trusses 579
Summary 601
Problems 601

APPENDIX A COMPUTER SOFTWARE 603

APPENDIX B FLEXIBILITY METHOD 605
