<i>Preface</i>	v
1. Introduction	1.1
2. Chromones	2.1
2.1 General Methods of Synthesis of Chromones	2.3
2.2 Individual Members	2.5
2.2.1 Eugenin $C_{11}H_{10}O_2$	2.5
3. Flavones	3.1
3.1 Isolation Flavones	3.1
3.2 General Properties of Flavones	3.1
3.3 General Methods of Structure Determination	3.2
3.3.1 Chemical Methods	3.2
3.3.2 Spectroscopic Methods	3.3
3.3.3 Synthesis of Flavones	3.7
3.3.4 Individual Members	3.12
3.3.4.1 Flavone, $C_{15}H_{10}O_2$	3.12
3.3.4.2 Chrysin	3.13
3.3.4.3 Apigenin	3.13
3.3.4.4 Vitexin	3.15
3.3.4.5 Luteolin	3.15
4. Flavanones	4.1
4.1 General Methods of Synthesis of Flavanones	4.3
4.2 Individual Members	4.4
4.2.1 Naringenin (5, 7, 4'-trihydroxyflavanone)	4.4
4.2.2 Naringin	4.6

5. Flavonols	5.1
5.1 Structure Elucidation of Flavonols	5.1
5.2 Individual Members	5.1
5.2.1 Flavonol, C ₁₅ H ₁₀ O ₃	5.1
5.2.2 Quercetin C ₁₅ H ₁₀ O ₇	5.3
5.2.2.1 Quercetin Glycosides	5.6
5.2.2.2 Relationship of Quercetin and Cyanidin	5.7
5.2.3 Myricetin	5.8
6. Isoflavones	6.1
6.1 Structure Elucidation of Isoflavones	6.1
6.2 Individual Members	6.1
6.2.1 Daidzein, C ₁₅ H ₁₀ O ₄	6.1
7. Chalcones	7.1
7.1 Individual Members	7.2
7.1.1 Butein	
8. Aurones	8.1
8.1 Aureusidin	8.1
9. Anthocyanidins	9.1
9.1 Individual Members	9.2
9.1.1 Cyanidin Chloride, C ₁₅ H ₁₁ ClO ₆	9.2
9.1.2 Hirstidin Chloride	9.8
10. Xanthones	10.1
10.1 General Methods of Synthesis	10.2
10.2 Individual Members	10.3
10.2.1 Euxanthone C ₁₃ H ₈ O ₄	10.3
10.2.2 Gentisin, C ₁₄ H ₁₀ O ₅	10.4
10.3 Biosynthesis of Flavonoids	10.5
11. Quinones	11.1
11.1 p-Benzoquinones	11.1
11.1.1 Tolu-p-quinone (C ₇ H ₆ O ₂) and 2-ethylbenzoquinone C ₈ H ₈ O ₂	11.1
11.1.2 Gonyleptedine	11.2
11.1.3 Methoxy Substituted p-benzoquinones	11.2
11.1.4 Embelin, Embelic Acid, C ₁₇ H ₂₆ O ₄	11.3
11.1.5 Rapanone, C ₁₉ H ₃₀ O ₄	11.4
11.1.6 Polyporic Acid, C ₁₈ H ₁₂ O ₄	11.4

11.2	Napthaquinones	11.5
11.2.1	Diosquinone $C_{10}H_6O_3$	11.6
11.2.2	Lawsone, $C_{10}H_6O_3$	11.6
11.2.3	Juglone, $C_{10}H_6O_3$	11.7
11.2.4	7-Methyl Juglone and 2-Methyl Juglone (Plumbagin)	11.7
11.2.5	Phthiocol, $C_{11}H_8O_3$	11.9
11.3	Anthraquinones	11.9
11.3.1	Anthraquinone, $C_{14}H_8O_2$	11.9
11.3.2	Tectoquinone, $C_{15}H_{10}O_2$	11.9
11.3.3	2-Hydroxyanthraquinone, $C_{14}H_8O_3$	11.9
11.3.4	3-Hydroxy-2-Methylanthraquinone, $C_{15}H_{10}O_3$	11.9
11.3.5	4-Hydroxy-2-Methylanthraquinone, $C_{15}H_{10}O_3$	11.10
11.3.6	Alizarin, $C_{14}H_8O_4$	11.10
11.3.7	Alizarin-1-Methyl Ether $C_{15}H_{10}O_4 \cdot H_2O$	11.14
11.3.8	Xanthopurin (Purpuroxanthin), $C_{14}H_8O_4$	11.14
11.3.9	Purpurin, $C_{14}H_8O_5$	11.15
12.	Coumarins	12.1
12.1	Introduction	12.1
12.1.1	Classification	12.1
12.1.2	General Properties	12.3
12.2	Simple Coumarins	12.4
12.2.1	General Methods of Synthesis	12.4
12.2.2	Reactions of Coumarins	12.6
12.2.3	Individual Members	12.9
12.2.3.1	Coumarin, $C_9H_6O_2$	12.9
12.2.3.2	Umbelliferone, $C_9H_6O_2$	12.10
12.2.3.3	Aesculetin, $C_9H_6O_4$	12.10
12.2.3.4	Limettin, $C_{11}H_{10}O_4$	12.11
12.2.3.5	Daphnetin, $C_9H_6O_4$	12.11
12.3	Alkylcoumarins	12.11
12.3.1	4-Methyl Coumarin	12.11
12.3.2	General Methods of Synthesis of 4-Methylcoumarins	12.11
12.3.3	General Properties of 4-methylcoumarins	12.13
12.3.4	Individual Members	12.15
12.3.4.1	7-Hydroxy-4-methylcoumarin, $C_{10}H_8O_3$	12.15
12.3.4.2	7-Acetoxy-4-methylcoumarin, $C_{12}H_{10}O_4$	12.15
12.3.4.3	Liqcoumarin $C_{12}H_{10}O_4$	12.15

12.4	4-Phenyl Coumarins	12.15
12.4.1	General Methods of Synthesis	12.16
12.4.2	General Properties of 4-phenylcoumarins	12.18
12.4.3	Individual Members	12.18
12.4.3.1	Dalbergin, $C_{16}H_{12}O_4$	12.18
12.4.3.2	O-Methylalbergin, $C_{17}H_{14}O_4$	12.20
12.4.3.3	Nor Dalbergin, $C_{15}H_{10}O_4$	12.20
12.4.3.4	Isodalbergin, $C_{16}H_{12}O_4$	12.21
12.4.3.5	Conversion of 4-phenyl Coumarin into other Type of Compounds	12.21
12.5	4-Hydroxy Coumarins	12.24
12.5.1	General Methods of Synthesis	12.25
12.5.2	General Properties of 4-hydroxycoumarins	12.27
12.5.3	Individual Members	12.33
12.5.3.1	Siderin, $C_{12}H_{12}O_4$	12.33
12.5.3.2	7-Hydroxy-4-methoxy-5-methylcoumarin	12.33
12.5.3.3	Dicoumarol, $C_{19}H_{12}O_4$	12.33
12.6	3,4-Dimethoxy Coumarins	12.35
12.6.1	General Methods of Synthesis	12.36
12.6.2	Individual Members	12.36
12.6.2.1	3,4-Dimethoxy-5-Methylcoumarin (3-Methoxy Perefloirin), $C_{12}H_{12}O_4$	12.36
12.6.2.2	3,4,8-Trimethoxy-5-Methylcoumaran (3,8-Dimethoxy Perefloirin), $C_{13}H_{14}O_5$	12.37
12.7	4-Hydroxy-3-Phenylcoumarins	12.37
12.7.1	General Methods of Synthesis	12.38
12.7.2	General Properties	12.39
12.7.3	Individual Members	12.40
12.1.3.1	Derrusnin, $C_{19}H_{16}O_7$	12.40
12.8	3-Hydroxycoumarins	12.42
12.8.1	General Methods of Synthesis	12.42
12.8.2	General Properties	12.43
13.	Pyrrole Pigments	13.1
13.1	Introduction	13.1
13.2	Chlorophyll	13.2
13.2.1	Colour Reactions	13.2
13.2.2	Structure of Chlorophylls	13.2

13.2.3	Structure of Chlorophyll-a	13.4
13.2.3	Synthesis of Chlorophyll-a	13.9
13.2.4	NMR Spectra of Chlorophyll-a	13.16
13.3	Haemoglobin	13.16
13.3.1	Structure of Haemin	13.17
13.2.2	Synthesis of Haemin	13.21
13.3.3	Structure of Haemoglobin	13.24
13.3.4	Metabolism of Haemoglobin	13.24
14.	Carotenoids	14.1
14.1	Introduction	14.1
14.2	β -Carotene	14.2
14.3	α -Carotene	14.6
14.4	γ -Carotene	14.7
14.5	Lycopene	14.8
15.	Natural Pigments as Food Colorants	15.1
<i>Index</i>		<i>1.1</i>
