

Contents

Preface	vii
Notation	xi
1 Basic Results from Galois Cohomology	1
Preliminary results	1
Poitou-Tate sequence	3
Cassels-Poitou-Tate sequence	5
Cassels-Poitou-Tate sequence for elliptic curves	7
2 The Iwasawa Theory of the Selmer Group	14
Introduction	14
The fundamental diagram	16
Cyclotomic theory	17
A theorem of Kato	24
3 The Euler Characteristic Formula	27
Introduction	27
Cyclotomic theory	28
The division field case	42
4 Numerical Examples over the Cyclotomic $\mathbb{Z}_p$-extension of $\mathbb{Q}$	46
Introduction	46
Iwasawa theory over $\mathbb{Q}_\infty$ for the curves of conductor 11 .	49
Iwasawa theory over $\mathbb{Q}_\infty$ for the curves of conductor 294 .	55
5 Numerical Examples Over $\mathbb{Q}(\mu_{p^\infty})$	59
Introduction	59
General strategy for the curves of conductor 11 over $\mathbb{Q}(\mu_{5^\infty})$	60
The curve A_0	63
The curve A_2	70
Infinite descent on A_1 over $\mathbb{Q}(\mu_5)$	70
The curves of conductor 294 over $\mathbb{Q}(\mu_{7^\infty})$	79

Appendix	82
Structure theory of Iwasawa modules	82
Deeply ramified p -adic fields and cyclotomic extensions . .	86
Tate parametrization of elliptic curves	92
Multiplicative Kummer generators	93
Bibliography	95
