Preface	vii
1 Heuristic Approaches in High-Frequency Theory of Diffraction	1
1.1 Geometrical Tendencies in High-Frequency Theory of Diffraction	1
1.1.1 The Most Important Asymptotic Methods in the Theory of Diffraction (ToD)	1
1.1.2 Geometrical Heuristic Principles	5
1.1.3 Advantages of Heuristic Approaches	6
1.1.4 Main Aim of the Book and Its Structure	7
1.2 Tendencies and Recent Novelties in the Heuristic Methods	8
1.2.1 Evergreen Geometrical Optics	8
1.2.2 Complex Geometrical Optics: From an Intellectual Toy to an Effective Instrument of the Wave Theory	9
1.2.3 New Applications of Quasi-Optics	9
1.2.4 Tendencies in GTD and Improvements of Kirchhoff's Approach	10
1.2.5 All Quiet in the Theory of Caustic Wave Fields	10
2 Geometrical Optics (GO)	13
2.1 The Scalar Wave Field	13
2.1.1 Heuristic Suppositions of GO	13
2.1.2 Basic Equations of GO	15
2.1.3 Eikonal and Rays	17
2.1.4 Properties of Rays	20
2.1.5 Perturbation Techniques for the Eikonal and Rays	26
2.1.6 Wave Amplitude	31
2.1.7 Paraxial Geometrical Optics (PGO)	38
2.1.8 Reflection and Refraction of Waves at Interfaces	42
2.1.9 Caustics	50

Contents

2.2	Electromagnetic Waves	55
2.2.1	Maxwell's Equations	55
2.2.2	Transverse Electromagnetic Waves in an Isotropic Medium	56
2.2.3	Independent Normal Waves in an Anisotropic Medium	64
2.2.4	Waves in Weakly Anisotropic Media	72
2.2.5	Reflection and Refraction of Electromagnetic Waves at Interfaces	76
2.3	Space-Time Geometrical Optics	79
2.3.1	Maxwell's Equations in Inhomogeneous, Nonstationary and Dispersive Media	79
2.3.2	The Transport Equation for Independent Normal Modes in an Anisotropic Medium	86
2.3.3	Nonmonochromatic Waves in an Isotropic Medium	91
2.3.4	Selected Applications	94
2.4	Applicability of Geometrical Optics	102
2.4.1	The Fresnel Volume and Physical Meaning of the Ray	102
2.4.2	Heuristic Criteria of Geometrical-Optics Applicability	109
2.4.3	Heuristic Estimates of Diffraction Wave Fields in the Area of GO Inapplicability	113
2.4.4	Applicability Conditions for Space-Time Geometrical Optics	120
3	Complex Geometrical Optics (CGO)	125
3.1	Basic Equations of CGO	125
3.1.1	Character of Wave Fields Described by CGO	125
3.1.2	Ray-Based Form of CGO	127
3.1.3	Eikonal-Based Form of CGO	130
3.2	Complex Rays and Ray-Based Form of CGO	133
3.2.1	Properties of Complex Rays	133
3.2.2	Selected Applications	139
3.2.3	Complex Ray Tracing	151
3.3	Paraxial CGO	157
3.3.1	Basic Equations of Paraxial CGO	157
3.3.2	Analytical and Numerical Solutions	161
3.3.3	Comparison with Other Asymptotic Methods. Some Generalisations	167
4	Paraxial (Quasi-Optical) Approximation	171
4.1	Parabolic Wave-Equation	171
4.1.1	The Parabolic Wave-Equation of Leontovich and Fock	171
4.1.2	Plane-Wave Excited Field Near a Convex Conductor	176
4.1.3	Relations to Other Heuristic Methods	180
4.1.4	Truncated PWE of Babich	183
4.1.5	Electromagnetic Waves in Oversized Lossy Waveguides	187

4.2	Paraxial Wave-Equation in Time-Domain	192
4.2.1	Propagation of Narrow Pulses	192
4.2.2	Time-Domain PWE in Ray Co-Ordinates	194
4.2.3	Paraxial Model for Narrow-Banded Waves	195
4.2.4	Pulse Propagation in Oversized Lossy Waveguides	197
4.2.5	Space-Time Gaussian Beams	198
4.3	Finite-Difference-Type Solutions of PWEs	202
4.3.1	Two-Dimensional Cases. Absorbing Boundary-Conditions	202
4.3.2	Solving PWE in Oversized Lossy Waveguides	206
4.3.3	An Example	210
5	Geometrical Theory of Diffraction (GTD) and Improvements of Kirchhoff's Approach	215
5.1	Canonical Problems	215
5.1.1	Diffraction of a Plane Wave by a Half-Plane (Sommerfeld's Problem)	215
5.1.2	Diffraction of a Plane Wave by a Wedge	221
5.1.3	Diffraction of a Spherical Wave by a Perfect Wedge	226
5.1.4	Diffraction of a Plane Wave by a Circular Cylinder	229
5.1.5	Diffraction of a Plane Wave by a Circular Cone	233
5.1.6	Diffraction of a Plane Wave by a Uniformly Moving Half-Plane	241
5.1.7	Diffraction by Bodies with Wedges: Method of Generalised Eikonal (MGE)	243
5.2	Geometrical Theory of Diffraction (GTD)	247
5.2.1	Keller's Heuristic Postulates	247
5.2.2	Diffraction by a Curved Wedge	249
5.2.3	Diffraction by a Convex Body	254
5.2.4	Diffraction by Other Structures	257
5.2.5	Uniform Versions of Diffraction Coefficients	260
5.3	Kirchhoff's Approach and Its Improvements	266
5.3.1	Kirchhoff's Approach	266
5.3.2	Improvements of Kirchhoff's Approach	277
5.3.3	Relations to GTD	288
5.4	Heuristic Range of Validity of GTD	292
5.4.1	Method of Stationary Phase and Diffracted Rays	292
5.4.2	Fresnel Zones of Diffracted Rays	294
5.4.3	Heuristic Range of Validity of the GTD	297
6	Caustic Wave-Fields	301
6.1	Caustics as Catastrophes	301
6.1.1	Caustic Classification	301
6.1.2	Standard Integrals of Catastrophe Theory	312
6.1.3	Uniform Airy Asymptotic	318

Contents

6.1.4	General Uniform Asymptotics of the Caustic Wave Field on the Basis of Standard Integrals of Catastrophe Theory	325
6.1.5	Penumbra Caustics and Edge Catastrophes	328
6.2	Maslov's Method and the Method of Interference Integrals ...	334
6.2.1	Maslov's Method: Basic Relations	334
6.2.2	Specific Problems	338
6.2.3	Method of Interference Integrals	341
6.3	Other Kinds of Caustics and Standard Integrals	349
6.3.1	Diversity of Caustics	355
	References	359
	Index	383
