

Contents

<i>Preface</i>	<i>vii</i>
<i>Nomenclature</i>	<i>ix</i>
1 Introduction	1
1.1 An Overview of Engine Development Impact of Urban and Global Air Pollution	1
1.2 Engine Configuration and Components	5
1.3 Basic Engine Operating Cycles	8
1.4 Engine Types and Classification	11
1.5 Engine Parameters Geometric and Performance Parameters	14
1.6 Production IC Engines Reciprocating SI and CI Engines, Rotary (Wankel) IC Engine	18
1.7 Engine Combustion and Emissions	22
1.8 Summary	27
<i>Problems</i>	27
2 Thermodynamics of Combustion	29
2.1 Ideal Gas Laws and Properties of Mixtures	29
2.2 Combustion Stoichiometry	31
2.3 Application of First Law of Thermodynamics to Combustion Heat of Reaction, Enthalpy of Formation, Adiabatic Flame Temperature	34
2.4 Chemical Equilibrium Equilibrium Combustion Products	40
2.5 Thermodynamic Properties of Working Fluids Unburned Mixtures, Low Temperature Combustion Products, High Temperature Combustion Products	46
2.6 Chemical Kinetics	58
<i>Problems</i>	62
<i>References</i>	65

3	Combustion in SI Engines	66
3.1	Premixed Charge Combustion Laminar Premixed flames, Turbulent Premixed Flames, Flammability Limits, Autoignition Temperature	66
3.2	SI Engine Combustion Conceptual Models Flame Development, Flame Propagation, Flame Termination	76
3.3	Combustion Rate Characterization	83
3.4	Thermodynamic Analysis of Combustion Single Zone Combustion Model, Two Zone Combustion Model, Unmixed Model	85
3.5	Cycle- to- cycle Combustion Variations	96
3.6	Knocking Combustion Knock Detection and Measurement, Theories of Knock Factors Affecting Knock	100
	<i>Problems</i>	105
	<i>References</i>	107
4	Combustion in CI Engines	109
4.1	Fuel Injection and Spray Structure Fuel Atomization and Droplet Size Distribution, Spray Penetration	111
4.2	CI Engine Combustion Conceptual Models Conventional and Dec's Combustion Models	120
4.3	Diesel Combustion Process Characterization Ignition Delay, Effect of Engine and Operational Parameters on Delay Premixed Combustion, Mixing Controlled Combustion	125
4.4	Thermodynamic Analysis Empirical Heat Release Rate Correlations	136
4.5	Summary	142
	<i>Problems</i>	142
	<i>References</i>	143
5	Engine Combustion Systems and Management	145
5.1	Fluid Motion in Engine Cylinder Swirl, Tumble, Squish, Turbulent Flow	145
5.2	Valve Arrangement and Variable Valve Actuation Valve Flow Area, Valve Arrangements, Variable Valve Timing, Variable Valve Actuation Mechanisms	157
5.3	Classification of Engine Combustion Systems	165
5.4	Premixed Homogeneous Charge SI Engines Fuel Systems for SI Engines, Injection Scheduling in PFI Engines SI Engine Combustion Chamber Requirements, SI Engine Combustion Chamber Designs	167
5.5	Direct Injection Stratified Charge Engines Modes of DISC Engine Operation, DISC Engine Combustion Systems	177

5.6	Heterogeneous Charge CI Engines Fuel Injection Systems, Direct Injection Engines, Swirl Ratio - Number of Injection Spray - Combustion Bowl Size Relationship, MAN-M Combustion System, Indirect Injection Engines	184
5.7	HCCI/CAI Engines CAI Gasoline Engines, HCCI Diesel Engines Early and Late-in-Cylinder Injection	198
5.8	Engine Management and Sensors Engine Speed Sensors, Pressure Sensors, Temperature Sensors Air Mass Flow Sensors, Knock Sensors, Exhaust Gas Oxygen Sensors	211
	<i>Problems</i>	222
	<i>References</i>	223
6	Formation of Engine Emissions	225
6.1	Emission Effects on Health and Environment Photochemical smog	225
6.2	Sources of Engine Emissions	229
6.3	Formation of Carbon Monoxide	233
6.4	NO Formation Kinetics and Modelling of Thermal NO Formation, NO Formation in SI Engines NO Formation in CI engines, Formation of NO ₂	234
6.5	Unburned Hydrocarbon Emissions HC Emissions from SI engines, HC Emissions from CI Engines	246
6.6	Soot and Particulate Formation Composition and Structure of Particulates, Mechanism of Soot Formation Diesel Smoke	263
6.7	Diesel NO _x -Particulate Trade Off	273
6.8	Effect of SI Engine Design and Operating Variables Equivalence Ratio, Compression Ratio, Ignition Timing, Mixture Preparation, Residual Gas Dilution and EGR, Coolant Temperature Engine Speed, HC from In-Cylinder Liquid Fuel during Warm-up Intake system Heating, Summary	274
6.9	Effect of Diesel Engine Design and Operating Variables Compression Ratio, Combustion Chamber Type, Combustion Chamber Dead Volumes, Multi-valves and Air Motion Fuel Injection Variables, Engine Load and Speed, EGR, Fuel Quality, Summary	283
	<i>Problems</i>	292
	<i>References</i>	295
7	Emission Standards and Measurement	298
7.1	Emission Standards Light Duty Vehicles, Heavy Duty Engines Diesel Smoke Standards, Motorcycle Emission Standards	298
7.2	Emission Test Cycles Light duty vehicles, Heavy Duty Vehicle Engines, Motorcycles	305

7.3	Emission Measurement: Instrumentation and Methods	311
	NDIR Analyzers, Flame Ionization Detector, Chemiluminescence Analyzers, Smokemeters, Constant Volume Sampler, Particulate Emission Measurement	
	<i>References</i>	320
8	Emission Control Technology	321
	A. SI Engines	
8.1	SI Engine Design Parameters	321
	Engine Compression Ratio, Cylinder Size and Combustion Chamber shape Fuelling System, Multi-valves and Variable Valve Actuation Variable Swept Volume, Downsizing and Supercharging	
8.2	Add-on Systems for Treatment of Emissions within Engine	327
	PCV System, Evaporative Emission Control, Exhaust Gas Recirculation	
8.3	Exhaust Aftertreatment	333
	Thermal Reactors, Catalytic Aftertreatment, Classification of Catalytic Converters, Cold Start HC Emission Control, Catalyst Deactivation	
8.4	Direct Injection Stratified Charge (DISC) Engines	352
8.5	Summary of SI Engine Emission Control	354
	B. CI Engines	
8.6	CI Engine Design Parameters	357
	Fuel Injection Variables, Turbocharging, Control of Engine Oil Consumption	
8.7	Application of EGR in CI Engines	363
	Induction and Control of EGR	
8.8	Exhaust Aftertreatment in Diesel Engines	367
	Diesel Oxidation Catalysts, De-NO _x Catalysts, Diesel Particulate Filters, Regeneration of DPF, Partial Diesel Particulate Filters	
8.9	Summary of Diesel Emission Control	379
8.10	HCCI Engines for Emission Control	380
	<i>Problems</i>	382
	<i>References</i>	383
9	Engine Fuels and Emissions	386
9.1	Common Hydrocarbon Components	387
9.2	General Fuel Quality Requirements	389
9.3	Motor Gasoline	391
	Octane Quality, Distillation Range, Reid Vapour Pressure, Oxidation Stability and Deposit Control, Hydrocarbon Composition, Sulphur Content, Oxygenates, Other Properties and Contaminants, Summary of the Effect of Gasoline Properties on Emissions, Reformulated Gasoline, Development of International Gasoline Specifications	
9.4	Diesel Fuels	404

	Ignition Quality, Distillation Range, Density, Viscosity, Oxidation and Storage Stability, Chemical Composition, Sulphur Content, Lubricity, Summary of Effect of Diesel Quality on Emissions, Trends in Diesel Fuel Specifications	
9.5	Alternative Fuel Types	415
9.6	Alcohols	415
9.7	Natural Gas	419
9.8	Liquefied Petroleum Gas	422
9.9	Biodiesel	423
9.10	Gas-to-Liquid (GTL) Fuels	427
9.11	Dimethyl Ether (DME)	429
9.12	Hydrogen	430
9.13	Greenhouse Gas (CO ₂) Emissions	432
	<i>Problems</i>	435
	<i>References</i>	437
10	Combustion Diagnostics	439
10.1	In- cylinder Pressure Measurement	441
10.2	Optical Research Engines	444
10.3	Flow- Field Studies	446
	Laser Doppler Anemometry, Particle Image Velocimetry	
10.4	Spray Structure and Drop Size Distribution	450
	Fraunhofer Diffraction Method, Phase Doppler Particle Analyzer, Laser Sheet Dropsizing, Mie Scattering and PLIF Imaging	
10.5	Engine Combustion Visualization	459
	High Speed Photography, Optical Tomographic Combustion Analysis	
10.6	Combustion Species and Temperature	462
	OH, CH and NO, Soot	
10.7	Summary	466
	<i>References</i>	467
11	Alternative Automotive Power Plants	469
11.1	Hybrid Electric Propulsion System	470
	Series Hybrid, Parallel Hybrid, Mixed Hybrid, Plug-in Hybrid	
11.2	Fuel Cell	473
	Fuel Cell Designs, Energy Sources for Fuel Cells, Fuel Cell Vehicles	
11.3	Gas Turbine	481
11.4	Strling Engine	482
	Advantages and Disadvantages	
11.5	Comparison of Automotive Propulsion Systems	485
	<i>References</i>	486
Appendices		487
A	Properties of Air	487

Contents

B	Properties of Fuels	488
C	Thermochemical Properties of Combustion Products and Other Ideal Gases	489
D	Conversion Factors and Physical Constants	496

<i>Index</i>		498
