I THEORY, CONSTRUCTION, AND OPERATION

1 Principles of Operation of Synchronous Machines	3
1.1 Introduction to Basic Notions on Electric Power	3
1.1.1 Magnetism and Electromagnetism	3
1.1.2 Electricity	6
1.2 Electrical–Mechanical Equivalence	7
1.3 Alternating Current (ac)	8
1.4 Three-Phase Circuits	15
1.5 Basic Principles of Machine Operation	16
1.5.1 Faraday’s Law of Electromagnetic Induction	18
1.5.2 Ampere–Biot–Savart’s Law of Electromagnetic Induced Forces	18
1.5.3 Lenz’s Law of Action and Reaction	18
1.5.4 Electromechanical Energy Conversion	20
1.6 The Synchronous Machine	21
1.6.1 Background	21
1.6.2 Principles of Construction	24
1.6.3 Rotor Windings	26
1.6.4 Stator Windings	28
1.7 Basic Operation of the Synchronous Machine	30
1.7.1 No-Load Operation	32
1.7.2 Motor Operation	34
1.7.3 Generator Operation	35
1.7.4 Equivalent Circuit	35
1.7.5 Machine Losses	36
Additional Reading	38

2	Generator Design and Construction	39
2.1	Stator Core	41
2.2	Stator Frame	46
2.3	Flux and Armature Reaction	48
2.4	Electromagnetics	51
2.5	End-Region Effects and Flux Shielding	56
2.6	Stator Core and Frame Forces	62
2.7	Stator Windings	63
2.8	Stator Winding Wedges	73
2.9	End-Winding Support Systems	76
2.10	Stator Winding Configurations	77
2.11	Stator Terminal Connections	80
2.12	Rotor Forging	81
2.13	Rotor Winding	89
2.14	Rotor Winding Slot Wedges	95
2.15	Amortisseur Winding	96
2.16	Retaining Rings	97
2.17	Bore Copper and Terminal Connectors	105
2.18	Slip-Collector Rings and Brush Gear	106
2.19	Rotor Shrink Coupling	107
2.20	Rotor Turning Gear	108
2.21	Bearings	109
2.22	Air and Hydrogen Cooling	111
2.23	Rotor Fans	112
2.24	Hydrogen Containment	113
2.25	Hydrogen Coolers	118
	References	118
3	Generator Auxiliary Systems	121
3.1	Lube-Oil System	122
3.2	Hydrogen Cooling System	122
3.3	Seal-Oil System	125
3.4	Stator Cooling Water System	128
	3.4.1 System Components	128
	3.4.2 Stator Cooling Water Chemistry	132
	3.4.3 Stator Cooling Water System Conditions	134
3.5	Exciter Systems	136
	3.5.1 Types of Excitation Systems	137
	3.5.2 Excitation System Performance Characteristics	139
	3.5.3 Voltage Regulators	141
4	Operation and Control	143
4.1	Basic Operating Parameters	143
	4.1.1 Machine Rating	144
	4.1.2 Apparent Power	145

4.1.3	Power Factor	146
4.1.4	Real Power	149
4.1.5	Terminal Voltage	149
4.1.6	Stator Current	149
4.1.7	Field Voltage	150
4.1.8	Field Current	150
4.1.9	Speed	150
4.1.10	Hydrogen Pressure	152
4.1.11	Hydrogen Temperature	152
4.1.12	Short-Circuit Ratio	153
4.1.13	Volts per Hertz and Overfluxing Events	153
4.2	Operating Modes	160
4.2.1	Shutdown	160
4.2.2	Turning Gear	160
4.2.3	Run-up and Run-Down	162
4.2.4	Field Applied Offline (Open Circuit)	163
4.2.5	Synchronized and Loaded (Online)	163
4.2.6	Start-up Operation	163
4.2.7	Online Operation	163
4.2.8	Shutdown Operation	165
4.3	Machine Curves	165
4.3.1	Open-Circuit Saturation Characteristic	165
4.3.2	Short-Circuit Characteristic	165
4.3.3	Capability Curves	167
4.3.4	V-Curves	169
4.4	Special Operating Conditions	170
4.4.1	Unexcited Operation (“Loss-of-Field” Condition)	170
4.4.2	Negative-Sequence Currents	174
4.4.3	Off-Frequency Currents	175
4.4.4	Load Cycling and Repetitive Starts	177
4.4.5	Overloading	178
4.4.6	Extended Turning-Gear Operation	178
4.4.7	Loss of Cooling	181
4.4.8	Overfluxing	182
4.4.9	Overspeed	190
4.4.10	Loss of Lubrication Oil	190
4.4.11	Out-of-Step Synchronization and “Near” Short Circuits	191
4.4.12	Ingression of Cooling Water and Lubricating Oil	192
4.4.13	Under- and Overfrequency Operation (U/F and O/F)	193
4.5	Basic Operation Concepts	193
4.5.1	Steady-State Operation	193
4.5.2	Equivalent Circuit and Vector Diagram	196
4.5.3	Power Transfer Equation between Alternator and Connected System	196
4.5.4	Working with the Fundamental Circuit Equation	198

4.5.5	Parallel Operation of Generators	203
4.5.6	Stability	206
4.5.7	Sudden Short Circuits	211
4.6	System Considerations	213
4.6.1	Voltage and Frequency Variation	214
4.6.2	Negative-Sequence Current	214
4.6.3	Overcurrent	224
4.6.4	Current Transients	224
4.6.5	Overspeed	224
4.7	Grid-Induced Torsional Vibrations	224
4.7.1	Basic Principles of Shaft Torsional Vibration	224
4.7.2	Spring Model of a Turbo-Generator Shaft Train	226
4.7.3	Determination of Shaft Torque and Shaft Torsional Stress	229
4.7.4	Material Changes due to Torsional Vibrations	229
4.7.5	Types of Grid-Induced Events	229
4.7.6	Monitoring of Torsional Vibration Events	234
4.7.7	Industry Experience and Alleviation Techniques	236
4.8	Excitation and Voltage Regulation	237
4.8.1	The Exciter	237
4.8.2	Excitation Control	238
4.9	Performance Curves	238
4.9.1	Losses Curves	238
4.9.2	Efficiency Curve	239
4.10	Sample of Generator Operating Instructions	239
	References	250
5	Monitoring and Diagnostics	251
5.1	Generator Monitoring Philosophies	252
5.2	Simple Monitoring with Static High-Level Alarm Limits	253
5.3	Dynamic Monitoring with Load-Varying Alarm Limits	254
5.4	Artificial Intelligence Diagnostic Systems	257
5.5	Monitored Parameters	260
5.5.1	Generator Electrical Parameters	261
5.5.2	Stator Core and Frame	265
5.5.3	Stator Winding	276
5.5.4	Rotor	293
5.5.5	Excitation System	313
5.5.6	Hydrogen Cooling System	315
5.5.7	Lube-Oil System	319
5.5.8	Seal-Oil System	321
5.5.9	Stator Cooling Water System	324
	References	330
6	Generator Protection	333
6.1	Basic Protection Philosophy	333
6.2	Generator Protective Functions	334

6.3	Brief Description of Protective Functions	337
6.3.1	Synchronizer and Sync-Check Relays (Functions 15 and 25)	339
6.3.2	Short-Circuit Protection (Functions 21, 50, 51, 51V, and 87)	339
6.3.3	Volts/Hertz Protection (Function 24)	341
6.3.4	Over- and Undervoltage Protection (Functions 59 and 27)	342
6.3.5	Reverse Power Protection (Function 32)	343
6.3.6	Loss-of-Field Protection (Function 40)	345
6.3.7	Stator Unbalanced Current Protection (Function 46)	345
6.3.8	Stator and Rotor Thermal Protection (Function 49)	347
6.3.9	Voltage Balance Protection (Function 60)	348
6.3.10	Time Overcurrent Protection for Detection of Turn-to-Turn Faults (Function 61)	349
6.3.11	Breaker Failure Protection (Function 62B)	350
6.3.12	Rotor Ground-Fault Protection (Function 64F)	351
6.3.13	Over-/Underfrequency Protection (Function 81)	352
6.3.14	Out-of-Step Operation (Loss of Synchronism) (Function 78)	353
6.4	Specialized Protection Schemes	355
6.4.1	Protection Against Accidental Energization	355
6.4.2	dc Field Ground Discrimination	357
6.4.3	*Vibration Considerations	360
6.4.4	Operation of the Isolated-Phase Bus (IPB) at Reduced Cooling and Risks from H ₂ Leaks into the IPB	362
6.4.5	Calculation of the H ₂ Mix in the IPB for a Given H ₂ Leak from the Generator into the IPB	364
6.5	Tripping and Alarming Methods	367
	References	372

II INSPECTION, MAINTENANCE, AND TESTING

7	Inspection Practices and Methodology	375
7.1	Site Preparation	375
7.1.1	Foreign Material Exclusion	375
7.1.2	Foreign Material Exclusion - Procedures	383
7.2	Experience and Training	384
7.3	Safety Procedures—Electrical Clearances	384
7.4	Inspection Frequency	387
7.5	Generator Accessibility	388
7.6	Inspection Tools	389
7.7	Inspection Forms	394
	References	409

8 Stator Inspection	411
8.1 Stator Frame and Casing	412
8.1.1 External Components	412
8.1.2 Internal Components	423
8.1.3 Caged Stator Cores—Inspection and Removal	435
8.2 Stator Core	438
8.2.1 Stator Bore Contamination	438
8.2.2 Blocked Cooling Vent Ducts	440
8.2.3 Iron Oxide Deposits	440
8.2.4 Loose Core Iron/Fretting and Interlaminar Failures	443
8.2.5 Bent/Broken Laminations in the Bore	455
8.2.6 Space Block Support and Migration	460
8.2.7 Migration of Broken Core Plate and Space Block Thick Plates	461
8.2.8 Laminations Bulging into Air Vents	461
8.2.9 Greasing/Oxide Deposits on Core Bolts	462
8.2.10 Core-Compression Plates	464
8.2.11 Core-End Flux Screens and Flux Shunts	465
8.2.12 Frame-to-Core Compression (Belly) Bands	467
8.2.13 Back-of-Core Burning	467
8.2.14 Core-End Overheating	470
8.3 Stator Windings	473
8.3.1 Stator Bar/Coil Contamination (Cleanliness)	473
8.3.2 End-Winding Blocking and Roving	474
8.3.3 Surge-Rings	478
8.3.4 Surge-Ring Insulation Condition	480
8.3.5 End-Winding Support Structures	481
8.3.6 Ancillary End-Winding Support Hardware	484
8.3.7 Asphalt Bleeding/Soft Spots	487
8.3.8 Tape Separation/Girth Cracking	489
8.3.9 Insulation Galling/Necking beyond the Slot	492
8.3.10 Insulation Bulging into Air Ducts	492
8.3.11 Insulation Condition, Overheating, and Electrical Aging	493
8.3.12 Corona Activity	496
8.3.13 Stator Wedges	504
8.3.14 End-Wedge Migration Out of Slot	507
8.3.15 Side-Packing Fillers	508
8.3.16 Leaks in Water-Cooled Stator Windings	509
8.3.17 Magnetic Termites	512
8.3.18 Flow Restriction in Water-Cooled Stator Windings	515
8.3.19 Hoses, Gaskets, and O-Rings in Water-Cooled Stator Windings	518
8.4 Phase Connectors and Terminals	520
8.4.1 Circumferential Bus Insulation	520
8.4.2 Phase Droppers	523

8.4.3	High-Voltage Bushings	525
8.4.4	Standoff Insulators	526
8.4.5	Bushing Vents	527
8.4.6	Bushing-Well Insulators and Hydrogen Sealant Condition	528
8.4.7	Generator Current Transformers (CTs)	529
8.5	Hydrogen Coolers	532
	References	534
	Additional Reading	535
9	Rotor Inspection	537
9.1	Rotor Cleanliness	538
9.2	Retaining Rings	539
9.2.1	Nonmagnetic 18–5 and 18–18 Retaining Rings	545
9.2.2	Removal of Retaining Rings	546
9.3	Fretting/Movement at Interference Fit Surfaces of Wedges and Rings	554
9.3.1	Tooth Cracking	554
9.4	Centering (Balance) Rings	563
9.5	Fan Rings or Hubs	563
9.6	Fan Blades	565
9.7	Bearings and Journals	567
9.8	Balance Weights and Bolts	570
9.9	End Wedges and Damper Windings	571
9.10	Other Wedges	576
9.11	Windings—General	577
9.11.1	Conductor Material	578
9.12	Rotor Windings—Slot Region	580
9.12.1	Slot Liner	580
9.12.2	Turn Insulation	583
9.12.3	Creepage Block and Top Channel	587
9.12.4	C-Channel Subslot	589
9.13	End Windings and Main Leads	589
9.13.1	Retaining Ring Liners	592
9.13.2	End Turns and Blocking	594
9.13.3	Shorted Turns	600
9.13.4	Top-Tooth Cracking	603
9.13.5	dc Main Leads	603
9.13.6	Coil and Pole Connections	607
9.14	Collector Rings	613
9.15	Collector Ring Insulation	619
9.16	Bore Copper and Radial (Vertical) Terminal Stud Connectors	621
9.17	Brush-Spring Pressure and General Condition	624
9.18	Brush Rigging	626
9.19	Shaft Voltage Discharge (Grounding) Brushes	629
9.20	Rotor Winding Main Lead Hydrogen Sealing—Inner and Outer	630
9.21	Circumferential Pole Slots (Body Flex Slots)	633

9.22	Blocked Rotor Radial Vent Holes—Shifting of Winding and/or Insulation	635
9.23	Couplings and Coupling Bolts	636
9.24	Bearing Insulation	638
9.25	Hydrogen Seals	640
9.25.1	Journal Seals	641
9.25.2	Thrust-Collar Seals	642
9.25.3	Carbon Seals	645
9.26	Rotor-Body Zone Rings	646
9.27	Rotor Removal	648
	References	657
10	Auxiliaries Inspection	659
10.1	Lube-Oil System	659
10.2	Hydrogen Cooling System	660
10.2.1	Hydrogen Desiccant/Dryer	661
10.3	Seal-Oil System	662
10.4	Stator Cooling Water System	663
10.5	Exciters	666
10.5.1	Rotating Systems Inspection	666
10.5.2	Static Systems Inspection	666
10.5.3	Brushless Systems Inspection	667
10.5.4	Specific Inspection Items	667
11	Generator Maintenance Testing	673
11.1	Stator Core Mechanical Tests	673
11.1.1	Core Tightness	673
11.1.2	Core and Frame Vibration Testing	674
11.2	Stator Core Electrical Tests	676
11.2.1	EL CID Testing	676
11.2.2	Rated Flux Test with Infrared Scan	684
11.2.3	Core Loss Test	695
11.2.4	Through-Bolt Insulation Resistance	696
11.2.5	Insulation Resistance of Flux Screens	696
11.3	Stator Winding Mechanical Tests	696
11.3.1	Wedge Tightness	696
11.3.2	Stator End-Winding Vibration	700
11.4	Water-Cooled Stator Winding Tests	700
11.4.1	Air Pressure Decay	700
11.4.2	Tracer Gases	701
11.4.3	Vacuum Decay	701
11.4.4	Pressure Drop	702
11.4.5	Flow Testing	702
11.4.6	Capacitance Mapping	702
11.5	Stator Winding Electrical Tests	702

11.5.1	Pretesting Requirements	703
11.5.2	Series Winding Resistance	704
11.5.3	Insulation Resistance (IR)	704
11.5.4	Polarization Index (PI)	706
11.5.5	Dielectric Absorption during dc Voltage Application	708
11.5.6	dc Leakage or Ramped Voltage	708
11.5.7	dc Hi-Pot	710
11.5.8	ac Hi-Pot	710
11.5.9	Partial Discharge (PD) Off-line Testing	714
11.5.10	Capacitance Measurements	717
11.5.11	Dissipation/Power Factor Testing	717
11.5.12	Dissipation/Power Factor Tip-up Test	717
11.6	Rotor Mechanical Testing	718
11.6.1	Rotor Vibration	718
11.6.2	Rotor Nondestructive Examination Inspection Techniques	719
11.6.3	Some Additional Rotor NDE Specifics	727
11.6.4	Air Pressure Test of Rotor Bore	731
11.7	Rotor Electrical Testing	733
11.7.1	Winding Resistance	733
11.7.2	Insulation Resistance (IR)	733
11.7.3	Polarization Index (PI)	733
11.7.4	dc Hi-Pot	734
11.7.5	ac Hi-Pot	734
11.7.6	Shorted Turns Detection—General	734
11.7.7	Shorted Turns Detection by Recurrent Surge Oscillation (RSO)	736
11.7.8	Shorted Turns Detection by Open-Circuit Test	737
11.7.9	Shorted Turns Detection by Winding Impedance	741
11.7.10	Shorted Turns Detection by Low-Voltage dc or Volt Drop	742
11.7.11	Shorted Turns Detection by Low-Voltage ac or “C” Core Test	743
11.7.12	Shorted Turns Detection by Shorted Turns Detector (Flux Probe)	744
11.7.13	Field-Winding Ground Detection by the Split-Voltage Test	762
11.7.14	Field Ground Detection by the Current-through-Forging Test	762
11.7.15	Shaft Voltage and Grounding	765
11.8	Hydrogen Seals	765
11.8.1	NDE	765
11.8.2	Insulation Resistance	766
11.9	Bearings	766
11.9.1	NDE	766

11.9.2	Insulation Resistance	766
11.10	Thermal Sensitivity Testing and Analysis	767
11.10.1	Background	767
11.10.2	Typical Thermal Sensitivity Test	769
11.11	Heat-Run Testing	771
11.11.1	Test Procedure	771
11.11.2	Acceptance Parameters	772
11.12	Hydrogen Leak Detection	773
11.12.1	Pressure Drop	774
11.12.2	SF ₆	776
11.12.3	Helium	777
