

Dynamics of
**Self-Organized
and Self-Assembled
Structures**

Rashmi C. Desai and Raymond Kapral

CAMBRIDGE

Contents

<i>Preface</i>	<i>Page</i>	<i>xiii</i>
1 Self-organized and self-assembled structures		1
2 Order parameter, free energy, and phase transitions		6
2.1 Mean field theory		8
2.2 Order parameter		14
2.3 Order parameter and its spatial correlations		16
3 Free energy functional		20
3.1 Ginzburg–Landau–Wilson free energy functional		21
3.2 Interfacial tension and the coefficient κ		22
3.3 Landau expansion of the local free energy density		23
4 Phase separation kinetics		25
4.1 Kinetics of phase ordering and phase separation		25
4.2 Dynamical scaling		29
5 Langevin model for nonconserved order parameter systems		32
5.1 Langevin model A		32
5.2 Model A reaction–diffusion system		34
6 Langevin model for conserved order parameter systems		38
6.1 Langevin model B		38
6.2 Critical quench in a model B system		39
6.3 Off-critical quench in a model B system		41
6.4 Model B interfacial structure		45

7	Interface dynamics at late times	50
7.1	Model B interface	50
7.2	Model A interface	56
8	Domain growth and structure factor for model B	60
8.1	Domain growth law	60
8.2	Porod's law and other consequences of sharp interfaces	62
8.3	Small- k behavior of $S(\mathbf{k}, \tau)$	64
9	Order parameter correlation function	65
9.1	Dynamic scaling and Ohta–Jasnow–Kawasaki theory	66
9.2	Other theories	68
9.3	Extension to model B	69
10	Vector order parameter and topological defects	71
11	Liquid crystals	75
11.1	Nematic liquid crystals	76
11.2	Smectic liquid crystals	82
12	Lifshitz–Slyozov–Wagner theory	87
12.1	Gibbs–Thomson boundary condition	88
12.2	LSW analysis for evaporating and growing droplets	90
13	Systems with long-range repulsive interactions	96
13.1	Langmuir monolayers	97
13.2	Block copolymers	100
13.3	Langevin models A and B including LRRI	102
14	Kinetics of systems with competing interactions	107
14.1	Equilibrium phase diagram	107
14.2	Linear stability analysis	112
14.3	Evolution of $\psi(\mathbf{x}, \tau)$ during phase separation	116
15	Competing interactions and defect dynamics	120
15.1	Polydisperse systems	121
15.2	Monodisperse coarsening and defect dynamics	122
16	Diffusively rough interfaces	128
16.1	KPZ equation	128
16.2	Interface width scaling	131

16.3	Connection between Langevin and KPZ equations	133
16.4	Dynamics of curved interfaces	137
17	Morphological instability in solid films	140
17.1	Lattice misfit	141
17.2	Elastic free energy functional	145
17.3	Evolution equations for the morphological instability	150
17.4	Solution of mechanical equilibrium equations	152
17.5	Linear stability analysis	154
18	Propagating chemical fronts	157
18.1	Propagation into a metastable state	158
18.2	Propagation into an unstable state	160
19	Transverse front instabilities	164
19.1	Planar traveling fronts	164
19.2	Kuramoto–Sivashinsky equation	166
19.3	Linear stability analysis and front dynamics	169
20	Cubic autocatalytic fronts	172
20.1	Analysis of front instability	174
20.2	Experimental observation of front instability	176
21	Competing interactions and front repulsion	179
21.1	Competing interactions in bistable media	179
21.2	Front repulsion	184
22	Labyrinthine patterns in chemical systems	189
22.1	Interface dynamics in two dimensions	189
22.2	Transverse instabilities of planar fronts	194
22.3	Three-dimensional patterns	197
23	Turing patterns	201
23.1	Turing bifurcation conditions	202
23.2	Pattern selection	206
23.3	Steady-state patterns	208
23.4	Stripe patterns	208
23.5	Time-dependent amplitude equation for stripe patterns	210
24	Excitable media	212
24.1	Traveling waves in excitable media	215

24.2	Eikonal equation	217
24.3	Spiral wave solution	218
24.4	Kinematic theory	219
24.5	Spiral wave meander	222
24.6	Scroll wave dynamics	226
25	Oscillatory media and complex Ginzburg–Landau equation	232
25.1	Hopf bifurcation	233
25.2	Complex Ginzburg–Landau equation	233
25.3	Stability analysis of CGL equation	237
25.4	Spatiotemporal chaos	239
26	Spiral waves and defect turbulence	242
26.1	Core instability	243
26.2	Defect-mediated turbulence	244
26.3	Other spatiotemporal states	247
26.4	Scroll wave solutions	248
26.5	Twisted filaments	249
27	Complex oscillatory and chaotic media	253
27.1	Spiral waves and line defects	254
27.2	Archimedean spiral splay field and line defects	256
27.3	Line defect dynamics and spiral core motion	261
27.4	Turbulence in chaotic systems	262
27.5	Defect-mediated turbulence	264
28	Resonantly forced oscillatory media	268
28.1	2:1 resonance	272
28.2	Other strong resonances	275
28.3	Complex front dynamics	276
29	Nonequilibrium patterns in laser-induced melting	278
29.1	Laser-induced melting	278
29.2	Static solutions	281
29.3	Linear stability analysis	285
29.4	Phase diffusion description and lamellar stability	286
30	Reaction dynamics and phase segregation	290
30.1	Phase segregation in reacting systems	290
30.2	Protein-induced pattern formation in biomembranes	293
