

HENK RITZEMA

DRAIN FOR GAIN

Making water management worth its salt

Subsurface drainage practices in irrigated
agriculture in semi-arid and arid regions

Contents

Preface	v
Contents	vii
Summary	xi
1 Introduction	1
1.1 Rationale of the study	1
1.2 Scope of the study	6
1.3 Objectives	7
1.4 Hypothesis	7
1.5 Methodology	8
1.6 Benefits of the research	8
1.7 Outline of this thesis	9
2 Subsurface drainage practices in Egypt	11
2.1 History of irrigation and drainage in Egypt	11
2.2 Organization of the drainage sector	13
2.3 Planning of drainage projects	14
2.4 Design principles	15
2.5 Installation practices	17
2.6 Disposal of the drainage effluent	20
2.7 A modified layout of the subsurface drainage system for rice areas	22
2.8 Controlled drainage and farmers participation	31
2.9 Verification of drainage design criteria in the Nile Delta	32
2.10 Water balance study in a drained area	40
3 Subsurface drainage practices in India	45
3.1 History of irrigation and drainage in India	45
3.2 Organization of the drainage sector	48
3.3 Design principles	49
3.4 Installation practices	50
3.5 Disposal of the drainage effluent	51
3.6 Lessons learned in farmers' fields	51
3.7 Water balance study in a drained area	64
3.8 Participatory approach	66
3.9 Participatory modelling to cope with off-site externalities of drainage	68
4 Subsurface drainage practices in Pakistan	81
4.1 History of irrigation and drainage in Pakistan	81
4.2 Organization of the drainage sector	83
4.3 Need for subsurface drainage	84
4.4 Design principles	85
4.5 Installation practices	88
4.6 Participatory drainage development	90
4.7 Operation and maintenance	91
4.8 Disposal of the drainage effluent	91

5	Improving subsurface drainage practices	95
5.1	From manual installation to large-scale implementation	95
5.1.1	Introduction	95
5.1.2	Installation equipment	96
5.1.3	Drain pipe materials	98
5.1.4	Envelope materials	100
5.1.5	Quality control	101
5.1.6	Organization	103
5.1.7	Capacity Building	107
5.1.8	Conclusions	108
5.2	The added value of research on drainage in irrigated agriculture	109
5.2.1	Introduction	109
5.2.2	Identification of the need for subsurface drainage	110
5.2.4	Planning and design	111
5.2.5	Installation	112
5.2.6	Operation and maintenance	114
5.2.7	Conclusions	115
6	Capacity development to improve subsurface drainage practices	117
6.1	An integrated approach for capacity development in drainage	117
6.1.1	Introduction	117
6.1.2	Materials and methods	118
6.1.3	Training and dissemination of knowledge through publications	120
6.1.4	Capacity development to improve subsurface drainage practices	121
6.1.5	Capacity development to combat waterlogging and salinity	122
6.1.6	Capacity development to increase farmers' participation	122
6.1.7	Capacity development for wise use of tropical peatlands	123
6.1.8	Discussion	125
6.1.9	Conclusions	127
6.2	Participatory research on the effectiveness of drainage	128
6.2.1	Introduction	128
6.2.2	Participatory research approach	129
6.2.3	Pre-drainage investigations	132
6.2.4	Monitoring programme	133
6.2.4	Model simulations	139
6.2.5	Conclusion and recommendations	139
7	Synthesis: subsurface drainage practices in irrigated agriculture	143
7.1	Is subsurface drainage an acceptable option?	143
7.1.1	Are subsurface drainage systems technically sound?	143
7.1.2	Are the subsurface drainage systems cost-effective?	147
7.1.3	Is subsurface drainage a socially accepted practice?	148
7.2	How can the integration of irrigation and drainage be improved?	150
7.3	What are the main challenges in making subsurface drainage work?	151
7.4	Improving subsurface drainage practices: the way forward	152
7.4.1	The state of the art in subsurface drainage	152
7.4.2	Institutional and policy challenges	154
7.4.3	Increased stakeholder participation	156
7.4.4	Drainage system requirements	161

7.4.5	Capacity development	163
8	The way forward: enhancing the role of subsurface drainage	167
