<b>1 Plant foods and health</b>	<b>1</b>
<i>Judith Buttriss</i>	
Introduction	1
Historical changes in the plant content of the human diet	1
Changing composition of dietary constituents in the past 50 years	5
Plants – nutrients and other constituents	6
A summary of the evidence linking plant food intake and health	6
Coronary heart disease and stroke	9
Fruits and vegetables	9
Pulses and nuts	13
Cereals	15
Antioxidant nutrients	17
Other bioactive substances	18
Antioxidant hypothesis	20
Phytosterols and –stanols	20
Conclusions for coronary heart disease and stroke	21
Cancer	21
Fruit and vegetables	21
Legumes and nuts	26
Foods containing fibre	26
Vitamins	26
Other plant-derived substances	28
Conclusions for cancer	28
Type 2 diabetes	29
Age-related macular degeneration and cataract	29
Age-related cognitive decline	30
Chronic obstructive pulmonary disease	31
Osteoporosis and bone health	31
Plant foods and health: overall conclusions	32
Recommendations and current policy on plant food intake	33
Fruit and vegetables	33
Wholegrain foods	35

## Contents

Current consumption patterns	35
Conclusions	39
Acknowledgement	40
<b>2 Carbohydrates and lipids</b>	<b>52</b>
<i>Andrew Salter and Gregory Tucker</i>	
Introduction	52
Major carbohydrates	53
Sugars	54
Polysaccharides	55
Starch	55
Cell wall polymers	58
Biosynthesis of cell wall polymers	60
Cell wall turnover	62
Nutritional benefits of plant carbohydrates	64
Major sources of dietary fibre within the diet and recommended intakes	64
Definition and measurement of dietary fibre	65
Physiological effects of dietary fibre	66
Lipids	68
Synthesis of fatty acids in plants	69
Synthesis of glycerolipids in plants	70
Modification of plant lipids	73
Fatty acid composition of plant foods	76
Vegetables	76
Cereals	77
Fruit	77
Oil seeds	77
Dietary lipids and human health	79
Phytosterols	80
<b>3 Carotenoids</b>	<b>89</b>
<i>Úrsula Flores-Perez and Manuel Rodriguez-Concepcion</i>	
Introduction	89
Structure, biosynthesis and function of plant carotenoids	90
Dietary sources and health benefits	93
Absorption and bioavailability of dietary carotenoids	97
Carotenoid type	98
Food matrix	98
Carotenoid metabolism in humans	99
Meeting the dietary demand and consequences for imbalance	101
Acknowledgements	102
<b>4 Polyphenols</b>	<b>110</b>
<i>David Vauzour, Katerina Vafeiadou and Jeremy P. E. Spencer</i>	
Introduction	110

Polyphenol structure	110
Phenolic acids and stilbenes	110
Flavonoids	113
Biosynthetic routes within the plant	115
Shikimic precursor and benzoic acid biosynthesis	115
Cinnamic acid biosynthesis	115
Stilbene biosynthesis	119
Flavonoid biosynthesis	119
Major sources within the diet	121
Phenolic acids and stilbenes	121
Flavonoids	121
Flavonols	121
Flavanones	122
Flavanols	123
Flavones	123
Anthocyanins	123
Isoflavones	123
Metabolic fate of dietary polyphenols	124
Gastrointestinal tract metabolism	124
Colonic metabolism	126
Role in human health	127
Flavonoids as classical antioxidants	128
Non-antioxidant activities of flavonoids	130
Interactions with cell signalling pathways	131
Other potential mechanisms of action	133
Conclusion	133
Summary	134
Acknowledgements	134
<b>5 Vitamins C and E</b>	<b>146</b>
<i>David Gray, John Brameld and Gregory Tucker</i>	
Introduction	146
Vitamin C: structure and chemistry	146
Dietary sources of vitamin C	147
Vitamin C: biosynthesis and metabolism in plants	148
Vitamin C functions in plants	152
Vitamin C manipulation in plants	154
Absorption and transport of vitamin C in mammals	155
Vitamin E: structure and chemistry	156
Dietary sources of vitamin E	159
Vitamin E: biosynthetic pathways	159
Roles of tocopherols in plants	161
Manipulation of tocopherol concentration	162
Absorption and transport of vitamin E in mammals	164
Antioxidant functions of vitamin E	164

<b>6 Folate</b>	<b>173</b>
<i>Stéphane Ravanel and Fabrice Rébeillé</i>	
Introduction	173
One-carbon metabolism	174
Generation and interconversion of C1-units	176
Serine–glycine metabolism	176
Formate activation	176
Histidine catabolism	177
Interconversion of C1-substituted folates	178
Utilisation of C1-units	179
Methionine synthesis	179
Purine ring formation	179
Formylation of methionyl-tRNA	180
Thymidylate synthesis	180
Pantothenate synthesis	180
Folate synthesis and distribution in plants	181
Biosynthesis of tetrahydrofolate in plants	181
Pterin branch	182
pABA branch	183
Assembly of the pterin, pABA and glutamate moieties	183
Reduction and polyglutamylation	184
Catabolism and salvage pathway	185
Compartmentation and transport of folates	185
Subcellular location of folates	185
Folate transporters	186
Folates distribution in plants	186
Physiology of folate in human health and disease	188
Absorption	188
Transport, storage, catabolism and excretion	189
Metabolic and clinical manifestations of folate deficiency	189
Diagnosis of folate deficiency	190
Folate bioavailability, requirements and food fortification	191
Bioavailability	191
Dietary intake recommendations	192
Dietary sources of folate	192
Food fortification	194
Prospects for plant foods biofortification	195
<b>7 Phytoestrogens</b>	<b>203</b>
<i>Helen Wiseman</i>	
Introduction	203
Biosynthesis of phytoestrogens	203
Introduction	203
Isoflavonoids	203
Prenylated flavonoids	205

Stilbenes	205
Lignans	205
Genetic engineering	205
Isoflavonoids	206
Introduction	206
Dietary sources and intakes	206
Metabolism and bioavailability	208
Isoflavonoids and cancer prevention	211
Hormone-dependent cancer prevention by isoflavonoids	211
Oestrogens and risk of breast cancer	213
Oestrogen receptor-mediated events	213
Animal models	215
Mechanisms of anticancer action of isoflavonoids	217
Clinical studies	219
Protection by isoflavonoids against cardiovascular disease	220
Cholesterol-lowering and isoflavonoids	220
Antioxidant action	222
Arterial function	225
Cellular effects	226
Protection by isoflavonoids against osteoporosis, cognitive decline and menopausal symptoms?	226
Osteoporosis	226
Menopausal symptoms and cognitive decline	227
Isoflavonoids: potential risks	228
Lignans	229
Introduction	229
Production of mammalian lignans	230
Cardiovascular disease	230
Breast cancer prevention	230
Prostate cancer prevention	230
Prevention of other types of cancer	231
Other health benefits	231
Prenylflavonoids	231
Stilbenes	233
Miroestrol	235
Deoxybenzoins	235
Coumestans	236
Phytoestrogens and human health: conclusions	236
<b>8 Plant minerals</b>	<b>254</b>
<i>Martin R. Broadley and Philip J. White</i>	
Introduction	254
Genetic variation in plant mineral concentration	258
Introduction	258
Between-species genetic variation in plant mineral concentration	258

## *Contents*

Within-species genetic variation in plant mineral concentration	259
Iron and zinc	260
Iodine and selenium	263
Calcium and magnesium	264
Copper	266
Has the mineral concentration of crops declined due to breeding for increased yield?	266
Evidence for a decline in mineral concentration of horticultural crops	266
Is there evidence for a decline in mineral concentration of staple crops?	267
A case study on potatoes; a précis of White et al. (2009)	268
Index	278
