Contents

List of Figures	xix
List of Tables	xxiii
Preface.....	xxv
Acknowledgment.....	xxvii
About the Authors	xxix
1 Does Your Testing Look Like This?	1
1.1 Last-Minute Flailing	1
1.2 Fiascos Uncovered Weeks before Launch	2
1.3 Huge Warranty Problems	2
1.4 Customer Dissatisfaction	4
2 Benefits of Improved Testing.....	5
2.1 Product Problems Revealed Early	6
2.2 Improved Reliability = Lower Cost	8
2.3 Happy Customers	8
2.4 Confidence in a Fine Product	8
2.5 Cost-Effective Testing Solutions Not Waiting Until the Last Minute	9
3 Overview.....	11
3.1 Goals of Testing.....	11
3.1.1 Discover Product Defects.....	11
3.1.2 Prevent Defects	13
3.1.3 Contain Defects to a Single Release.....	14
3.1.4 Statistical Analysis of Release Readiness.....	15
3.1.5 Discover Product Failure Limits.....	15
3.2 Types of Testing	17
3.2.1 Qualitative	18
3.2.2 Quantitative.....	19

3.2.3	Semi-Quantitative (Count Data).....	20
3.2.4	The Four-Phase Approach	21
3.3	Levels of Testing	25
3.3.1	Scale-Up, Scale-Down—The Reductive Approach.....	25
3.3.2	Levels of Testing	28
3.3.3	Holistic, Counter-Reductive Approach	28
4	Basic Principles.....	33
4.1	Looking at the Evidence.....	33
5	The Question.....	37
5.1	Not Phrases.....	37
5.1.1	“We Tested and No Trouble Found”	37
5.2	Instead	38
5.2.1	Assume Customer Observation Correct but May Be Poorly Stated (Erroneous Correlation)	38
5.2.2	“What Set of Conditions Could Cause This Event to Occur?”	40
5.2.3	If Issue Not Seen, Assume You Have Not Found the Trigger	41
6	Contradictory Perspectives of Testing	43
6.1	Organic/Inorganic.....	43
6.1.1	Organic.....	43
6.1.2	Inorganic.....	44
6.1.3	Conclusion.....	44
6.2	Quantitative/Qualitative	45
6.2.1	Qualitative Testing	46
6.2.2	Semi-Quantitative Testing	46
6.2.3	Quantitative Testing	46
6.2.4	Conclusion.....	47
6.3	Objective/Subjective	47
6.3.1	Subjective.....	47
6.3.2	Objective	47
6.3.3	Conclusion.....	48
6.4	Deterministic/Probabilistic	48
6.4.1	Deterministic Is an Assumption	48
6.4.2	Probabilistic	49
6.4.3	Conclusion.....	50
6.5	Variable/Attribute	50
6.5.1	Attributes	50
6.5.2	Variable.....	51
6.5.3	Conclusion.....	52

6.6	Continuous/Discrete.....	52
6.6.1	Discrete.....	52
6.6.2	Continuous.....	53
6.6.3	Conclusion.....	53
6.7	Wide-Ranging/Focused.....	54
6.7.1	Wide-Ranging.....	54
6.7.2	Focused.....	55
6.7.3	Conclusion.....	55
6.8	Many/Few.....	56
6.8.1	Law of Large Numbers.....	56
6.8.2	Correct Identification of Distribution.....	56
6.8.3	How Small Can We Go?.....	58
6.8.4	t-Statistics.....	59
6.8.5	White Box.....	59
6.8.6	Black Box.....	59
6.8.7	Conclusion.....	60
6.9	Structure/Unstructured.....	60
6.9.1	Structure.....	60
6.9.2	Unstructured.....	61
6.9.3	Conclusion.....	62
6.10	Ordered/Random.....	63
6.10.1	Ordered.....	63
6.10.2	Random.....	64
6.10.3	Conclusion.....	64
6.11	Nominal/Overstress.....	65
6.11.1	Nominal.....	65
6.11.2	Overstress.....	65
6.11.3	Conclusion.....	66
6.12	Single Environment/Multiple Environments.....	66
6.12.1	Single Environment.....	66
6.12.2	Multiple Environments.....	67
6.12.3	Conclusion.....	67
6.13	Compliance/Characterization.....	67
6.13.1	Compliance Testing.....	68
6.13.2	Characterization.....	69
6.13.3	Conclusion.....	69
6.14	High-Level/Detailed.....	70
6.14.1	High-Level.....	70
6.14.2	Detailed.....	71
6.14.3	Conclusion.....	71

6.15	Growing/Imposing.....	72
6.15.1	Growing.....	72
6.15.2	Imposing.....	72
6.15.3	Conclusion.....	73
6.16	Bench/Field	73
6.16.1	Bench.....	73
6.16.2	Field.....	76
6.16.3	Mixture.....	78
6.16.4	Conclusion.....	79
6.17	Abstraction/Verisimilitude	79
6.17.1	Abstraction.....	80
6.17.2	Verisimilitude	81
6.17.3	Conclusion.....	82
6.18	Reproducible/Nonreproducible.....	82
6.18.1	Reproducible.....	82
6.18.2	Nonreproducible.....	83
6.18.3	Conclusion.....	83
6.19	Repeatable/Nonrepeatable	84
6.19.1	Automated Testing Allows for Repeatability When the Failure Is Truly Repeatable	84
6.19.2	Nonrepeatable Testing Is a Serious Problem	84
6.19.3	Conclusion.....	86
6.20	Linear/Nonlinear	86
6.20.1	Linear.....	86
6.20.2	Nonlinear.....	86
6.20.3	Conclusion.....	87
6.21	Fine/Coarse.....	88
6.21.1	Coarse.....	88
6.21.2	Fine.....	88
6.21.3	Conclusion.....	89
6.22	Combinatorial/Exhaustive/Stochastic.....	89
6.22.1	Exhaustive.....	89
6.22.2	Stochastic/Exploratory (Random)	90
6.22.3	Combinatorial.....	90
6.22.4	Foreground/Background: Foreground.....	92
6.22.5	Foreground/Background: Background	93
6.22.6	Conclusion.....	94
6.23	Focused/Fuzzy	94
6.23.1	Focused.....	94
6.23.2	Fuzzy	94
6.23.3	Conclusion.....	95

6.24	Instant/Enduring	95
6.24.1	Instant	95
6.24.2	Enduring.....	95
6.24.3	Conclusion.....	96
6.25	Inside System/Outside System	96
6.25.1	Inside System	96
6.25.2	Outside System	97
6.25.3	Conclusion.....	98
6.26	Ambiguity/Clarity	98
6.26.1	Ambiguity	98
6.26.2	Clarity.....	99
6.26.3	Conclusion.....	99
6.27	Sensitive/Insensitive	99
6.27.1	Sensitive.....	99
6.27.2	Insensitive	101
6.27.3	Conclusion.....	101
6.28	Long-Range/Short-Range.....	102
6.28.1	Short-Range	102
6.28.2	Long-Range	103
6.28.3	Conclusion.....	103
6.29	Costly/Cheap	104
6.29.1	Cheap (Less Expensive)	104
6.29.2	Costly (Expensive)	104
6.29.3	Conclusion.....	105
6.30	Flexible/Inflexible	105
6.30.1	Inflexible.....	105
6.30.2	Flexible	106
6.30.3	Conclusion.....	107
6.31	Parameter/Tolerance	107
6.31.1	Parameter Approach.....	107
6.31.2	Tolerance Approach.....	108
6.31.3	Conclusion.....	109
6.32	Standard/Failure	109
6.32.1	Test to Standard.....	109
6.32.2	Test to Failure.....	110
6.32.3	Conclusion.....	112
6.32.4	Small Sample/Large Sample: Small Sample	112
6.32.5	Small Sample/Large Sample: Large Sample	113
6.32.6	Conclusion.....	114
6.33	“Good”/“Bad” Testing.....	114
6.33.1	Bad	114

6.33.2	Confirm Fixes from Previous Testing.....	116
6.33.3	Good	116
6.33.4	Conclusion.....	117
6.34	Parallel/Sequential.....	117
6.34.1	Parallel.....	117
6.34.2	Sequential	118
6.34.3	Conclusion.....	119
6.35	Fractal/Smooth/Ordered.....	119
6.35.1	Fractal Stimulation Is Effectively “Noise”	119
6.35.2	Smooth Stimulation Is Not Necessarily “Not-Noise” but Rather Invariant Stimulation.....	120
6.35.3	Ordered Stimulation Is Definitely “Not-Noise”	121
6.35.4	Conclusion.....	121
7	The Use of Noise	123
7.1	Realistic	123
7.2	Can Use Taguchi Approach	123
7.3	Sometimes Difficult to Simulate	125
7.4	Where to Apply Noise?	125
7.5	Exogenous Shocks.....	125
7.6	Self-Generated Noise	126
8	How to Perform “Bad” Tests	129
8.1	Do Not	129
8.1.1	Add Stress	129
8.1.2	Go Beyond the Specified “Limits”	129
8.1.3	Use Unusual Combinations of Events.....	131
8.1.4	Check All Inputs and Outputs	131
8.1.5	Follow Up.....	131
8.2	Do	131
8.2.1	Let the Designers Create the Test Plan.....	131
8.2.2	Test Only for Nominal Input Values	132
8.2.3	Make Test Plans that Are Not Consistent with Historical Evidence	132
8.2.4	Provide a Benevolent, Air-Conditioned Environment.....	132
8.2.5	Forget About Extreme Situations	132
8.2.6	Ignore the FMEA or Fault Tree	133

9	Documenting the Testing.....	135
9.1	Components of a Test Plan.....	136
9.1.1	Title.....	136
9.1.2	Purpose.....	136
9.1.3	Tester and Supervisor.....	137
9.1.4	Contact Information.....	137
9.1.5	Contents.....	137
9.1.6	Mechanical Tests.....	137
9.1.7	Environmental Tests.....	138
9.1.8	Electronic Tests.....	138
9.1.9	Software Tests.....	139
9.1.10	Measurement Uncertainty.....	139
9.1.11	Equipment Calibration Dates.....	139
9.1.12	Equipment Identification.....	140
9.2	Components of a Test Report.....	141
9.2.1	Same as Test Plan + Description of Outcome.....	141
9.3	The DVP&R Format.....	142
9.4	Failures.....	142
9.4.1	Relevant Failures (MIL-STD-2074).....	142
9.4.2	Irrelevant Failures (MIL-STD-2074).....	151
10	Test Administration.....	153
10.1	Test Management.....	153
10.1.1	Test Process.....	156
10.1.2	Test Marketing.....	157
10.2	Test Scheduling.....	158
10.2.1	Schedule the Tests as Early as Possible.....	158
10.2.2	Effort Is Not Labor Intensive.....	159
10.2.3	Effort Is Labor Intensive.....	159
10.2.4	Do Not Wait Until Product Release to Schedule Testing.....	159
10.3	Test Human Resources.....	160
10.3.1	Technicians versus Engineers.....	160
10.4	Test Device Resources.....	161
10.4.1	Whenever Possible, Provide Device Backup.....	161
10.4.2	Keep the Devices Calibrated.....	161
10.4.3	A Slower Device May Work Well as a Backup.....	161
10.4.4	Consider Alternative Methods for Testing.....	165

10.5	Test Quality.....	165
10.5.1	Issues Discovered Post-Testing.....	165
10.5.2	Deliberately Adding Faults to the Unit under Test	166
10.5.3	Testing Organization Should Always Be Prepared to Present Their Quality Data.....	166
10.6	Test Costing	167
10.6.1	Calculate the Cost of Testing—The Amount of Time It Takes	167
10.6.2	Laboratory Costing	167
10.6.3	Test Cost Quotation	167
10.7	Test Risk.....	169
10.7.1	Type 1 Failures	169
10.7.2	Type 2 Failures	169
10.8	Calibration Issues.....	169

11 Advanced Concepts171

11.1	Test Impacts	171
11.1.1	Measurement Uncertainty.....	171
11.1.2	Factor Analysis.....	171
11.1.3	Bias by Test Engineer.....	172
11.1.4	“Passing”	172
11.1.5	Sampling from Dependent Variable.....	173
11.1.6	“No Evidence of Cancer” or “Evidence of No Cancer”?	173
11.2	Construct Validity	173
11.2.1	Threats to Construct Validity.....	173
11.2.2	Translating Hypotheses into Test Scenarios.....	174
11.2.3	Why Is This Important?.....	174
11.3	Types of Bias.....	175
11.3.1	Causal Relationship.....	175
11.3.2	Causal Experimentation—Experimental Relationship	175
11.3.3	Validity	175
11.3.4	Threats to Statistical Validity	177
11.3.5	Threats to Internal Validity	178
11.3.6	Threats to External Validity	179
11.3.7	In Specifying and Selecting the Study Sample	180
11.3.8	In Measuring Exposures and Outcomes	182
11.3.9	In Analyzing the Data	184
11.3.10	In Interpreting the Analysis.....	184

11.4	Reliability and Confidence.....	185
11.4.1	Test Results Reliability.....	185
11.4.2	Test Results Confidence	186
11.5	Life Testing.....	186
11.5.1	Determine Stimuli the Product Will Be Subjected to in Real Life (Including Frequency and Duration).....	187
11.5.2	Apply Multiple Stimuli Simultaneously	188
11.5.3	Sometimes Hard to Correlate with Other Tests	189
11.5.4	Highly Accelerated Life Testing	189
11.6	Testing Team Early Involvement	190
11.6.1	Enables Past “Finds” in Past Testing to Be Considered during the New Design	191
11.6.2	Early Development of Test Plan and Review Ensures Plan Suitability	191
11.6.3	Provides Time to Create Any Specialized Tools or Fixtures for the Testing.....	191
12	Software Test Documentation.....	193
12.1	IEEE 829	193
12.2	Defect Life Cycle	195
13	Configuration Management	197
13.1	Configuration Management Areas.....	198
13.2	Planning	200
13.3	Elements of Configuration Management	200
13.3.1	Configuration Identification	203
13.3.2	Configuration Control	203
13.3.3	Configuration Tracking (Status Accounting)	204
13.3.4	Configuration Auditing.....	206
13.4	Importance of Configuration Management.....	207
13.4.1	Release Notes.....	207
13.4.2	Identify HW/SW and System Configurations to Test Up Front.....	208
13.4.3	Test Plan Grows with Feature/Function Growth and Configuration	208
13.4.4	Traceability.....	208
13.5	Links to Testing.....	209
13.6	Risks	209
13.6.1	Configuration Management Failures.....	209
13.6.2	Deviations.....	210
13.6.3	Configuration Management and Outsourcing.....	210

14	Software Testing	211
14.1	Overview.....	211
14.1.1	Qualification Testing.....	211
14.1.2	Exploratory or Stochastic Testing.....	212
14.1.3	Combinatorial Testing.....	212
14.2	Software Testing—The Problem.....	213
14.2.1	Astronomical Numbers of Test Cases to Get Complete Coverage.....	213
14.2.2	Development Philosophy Can Affect	213
14.3	Test Metrics.....	216
14.3.1	Cost of Test	216
14.3.2	Failures Found	219
14.3.3	Average Cost per Failure Found.....	221
14.3.4	Test Cases Documented.....	222
14.3.5	Test Cases Executed	222
14.3.6	Test Coverage (Test Cases to Requirements).....	225
14.4	Software Boundary Testing.....	225
14.4.1	Maximum and Minimum Values.....	226
14.5	Static Code Analysis.....	227
14.5.1	Test without Testing.....	227
14.6	Dynamic Code Analysis	228
14.6.1	Logic Analyzers Can Perform This Function.....	228
14.6.2	In-Circuit Emulators Also Do This.....	229
14.6.3	Debuggers Have Dynamic Behavior.....	229
14.6.4	The Capability Allows for in Situ Analysis of Code Behavior	229
15	Systems Testing.....	231
15.1	End-to-End Testing.....	231
15.2	Big-Bang Testing	232
15.3	Top-Down Testing.....	232
15.4	Bottom-Up Testing	233
15.5	Managing Multiple Test Hardware and Software Deliveries	233
15.6	Test Configuration Management	234
15.7	System Variations and Test Demands	234
15.8	Functional Testing.....	236
15.9	System Response to Multiple System Failures	238
15.10	Ranges of System Performance.....	238

16	Simulation and Emulation	239
16.1	Simulation	239
16.1.1	Simulation Typically Refers to a Model of a Process or Function	239
16.1.2	System	241
16.1.3	Component.....	245
16.1.4	Environmental	246
16.2	Simulation Levels	246
16.2.1	Virtual Simulators.....	246
16.2.2	Live Simulators	246
16.3	Simulation Activities	247
16.3.1	Identify Goals	248
16.3.2	Prepare for Simulation	248
16.3.3	Run Simulation.....	250
16.3.4	Perform Test.....	250
16.3.5	Gather Data	251
16.3.6	Analyze Data.....	251
16.3.7	Update Models	251
16.3.8	Design Updates.....	251
16.4	Objectives of Simulation	252
16.4.1	Evaluate Various Design Concepts Quickly without Material Investment.....	252
16.4.2	System Integration Demonstration	252
16.4.3	Refine Design Concept by Predicting Effects of Performance Parameters on System Behavior	253
16.4.4	Verify That the Simulated Object Performs Correctly across a Wide Range of Nominal and Fault Scenarios	253
16.4.5	Identify Key Variables That Have an Impact on the System and Know the System Implications	253
16.4.6	Reliability Implications	253
16.4.7	Theoretical Simulation Results as Reference for the Practical Verification	254
16.5	Simulation as Verification	254
16.5.1	Analysis of the Product Requirements	254
16.5.2	Generation and Specification of the Simulation Concept	254
16.5.3	Assessment of the Simulation Concept.....	256
16.5.4	Generation of Test Scenarios.....	256
16.5.5	Development of the Simulation Model	256

16.5.6	Making Available the Scenario Test Data and Performing the Simulation Runs.....	257
16.5.7	Analysis and Evaluation of the Simulation Results	257
16.5.8	Testing the Simulation Model.....	257
16.5.9	Possible Upgrade or Modification of the Simulation Model.....	257
16.6	Simulation as Test Preparation.....	258
16.6.1	Set Up Test Scenarios	258
16.6.2	Set Up Test Environment	258
16.6.3	Identify Key Test Measurable and Instrumentation Needs	258
16.6.4	Human Resource Needs.....	259
16.6.5	Material Resource Needs.....	259
16.6.6	Test Sequencing.....	259
16.6.7	Identification of “Passing” Criteria.....	259
16.7	Conflict between Simulation and Test Results	260
16.7.1	Emulation	260

17	Span of Tests	261
17.1	Software	261
17.1.1	Unit Test	261
17.2	Component Test.....	263
17.3	Subsystem-Level Integration Testing.....	263
17.4	System	263
17.4.1	Subsystem Test	263
17.4.2	System-Level Integration Test	263
17.4.3	System “Live Test”	264
17.4.4	Other System Tests	265
17.5	Production Test	265
17.6	Static Analysis	266
17.7	Structural Analysis	266
17.8	Simulation	266
17.9	Prototyping and Simulation	267
17.10	Reliability and Confidence.....	267
17.11	Limitations of Reliability and Confidence.....	268
17.11.1	“Normal Distribution” Assumption	268
17.12	Concept of “Life” and the Product.....	269
17.13	Establishing Product Life Exposure.....	271
17.13.1	Requirements.....	271
17.13.2	Measuring the Outside World.....	271
17.13.3	Standards	272

18	Exit Criteria	275
18.1	When Is Enough, Enough?	275
18.2	Compared to Plan?.....	276
18.3	Testing Ethics	277
	18.3.1 Test Plan Ethics	277
	18.3.2 Test Report Ethics	277
	18.3.3 Customer Relationship Ethics	277
18.4	Final Words	279
	Bibliography	281
	Index	283
