<i>Inorganic Materials Series Preface</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
<i>List of Contributors</i>	<i>xiii</i>
1 Metal-Organic Framework Materials	1
<i>Cameron J. Kepert</i>	
1.1 Introduction	1
1.2 Porosity	3
1.2.1 Framework Structures and Properties	3
1.2.2 Storage and Release	18
1.2.3 Selective Guest Adsorption and Separation	21
1.2.4 Heterogeneous Catalysis	27
1.3 Incorporation of Other Properties	31
1.3.1 Magnetic Ordering	32
1.3.2 Electronic and Optical Properties	41
1.3.3 Structural and Mechanical Properties	51
1.4 Concluding Remarks	54
Acknowledgements	56
References	56
2 Mesoporous Silicates	69
<i>Karen J. Edler</i>	
2.1 Introduction	69
2.2 Nomenclature	70
2.3 Methods of Preparation	71
2.4 Surfactant Aggregation	72
2.5 Silica Source	75
2.6 Template Removal	79
2.7 Synthetic Routes and Formation Mechanisms	83
2.7.1 True Liquid Crystal Templating	83
2.7.2 Cooperative Self-Assembly	87
2.7.3 Evaporation-Induced Self-Assembly	99
2.8 Properties and Characterisation	108

2.9	Macroscopic Structures	117
2.10	Applications	124
	References	128
3	Ordered Porous Crystalline Transition Metal Oxides	147
	<i>Masahiro Sadakane and Wataru Ueda</i>	
3.1	Introduction	147
3.2	Scope and Limitations of this Review	148
3.3	Microporous Transition Metal Oxide Materials	149
3.4	Mesoporous Transition Metal Oxide Materials	153
3.4.1	Soft Template Method	154
3.4.2	Hard Template Method	155
3.4.3	Mesoporous Oxides of Group 4 Elements (Ti, Zr)	157
3.4.4	Mesoporous Oxides of Group 5 Elements (Nb, Ta)	170
3.4.5	Mesoporous Oxides of Group 6 Elements (Cr, Mo, W)	172
3.4.6	Mesoporous Oxides of Group 7 Elements (Mn)	172
3.4.7	Mesoporous Oxides of Elements of Groups 8–11 (Fe, Co, Ni, Cu)	173
3.4.8	Mesoporous Oxides of Lanthanide Elements (Ce)	174
3.5	Macroporous Materials	174
3.5.1	Macroporous Monometal Oxides	177
3.5.2	Macroporous Oxides of Group 4 Elements (Ti, Zr)	191
3.5.3	Macroporous Oxides of Group 5 Elements (V, Nb)	191
3.5.4	Macroporous Oxides of Group 6 Elements (Cr, W)	192
3.5.5	Macroporous Oxides of Elements of Groups 7–11 (Mn, Fe, Co, Ni, Cu)	193
3.5.6	Macroporous Oxides of Lanthanide Elements (La, Ce, Nd, Sm, Eu)	194
3.5.7	Macroporous Multi-Component Metal Oxides	194
3.5.8	Two-Step Templating Method	207
3.5.9	Applications	207
3.6	Conclusion	209
	References	209
4	Templated Porous Carbon Materials: Recent Developments	217
	<i>Yongde Xia, Zhuxian Yang and Robert Mokaya</i>	
4.1	Introduction	217
4.2	Microporous Carbon Materials	221

4.2.1	Zeolites as Hard Template	221
4.2.2	Clays as Hard Template	229
4.2.3	Other Microporous Materials as Hard Template	231
4.3	Mesoporous Carbon Materials	231
4.3.1	Conventional Hard Template Synthesis Strategy	232
4.3.2	Cost-Effective Strategies for the Synthesis of Mesoporous Carbons	240
4.3.3	Soft-Template Synthesis Strategy for Ordered Mesoporous Carbons	241
4.3.4	Ordered Mesoporous Carbons with Graphitic Pore Wall	244
4.3.5	Mesopore Size Control	246
4.3.6	Morphology Control	247
4.4	Macroporous Carbon Materials	252
4.4.1	Silica Colloidal Crystals as Hard Template	252
4.4.2	Polymer Microspheres as Template	254
4.4.3	Dual Template Method	255
	References	258
5	Synthetic Silicate Zeolites: Diverse Materials Accessible Through Geoinspiration	265
	<i>Miguel A. Cambor and Suk Bong Hong</i>	
5.1	Introduction	265
5.2	Zeolites: Some Definitions	267
5.3	Zeolite Structures	269
5.4	Chemical Composition of Silicate Zeolites	270
5.4.1	Naming Zeolites	272
5.4.2	Loewenstein's Rule	273
5.5	Zeolite Properties	274
5.6	Zeolite Applications	275
5.7	Zeolite Synthesis	279
5.7.1	The Synthetic Zeolites as Geoinspired Materials	279
5.7.2	Thermochemistry of Zeolite Synthesis	281
5.7.3	Organic Structure-Directing Agents	284
5.7.4	Structure-Direction by Flexible, Hydrophilic OSDAs	289
5.7.5	Double OSDA Strategies	295
5.7.6	Structure-Direction by T-Atoms	297

5.7.7	Zeolite Synthesis from Nonaqueous Solvents	307
5.7.8	The Fluoride Route to Zeolites	308
5.7.9	Structure-Direction Issues in the Fluoride Route to Pure-Silica Zeolites	312
5.7.10	Topotactic Condensation of Layered Silicates	315
5.8	Concluding Remarks	316
	Acknowledgements	316
	References	317
	<i>Index</i>	327
