About the Authors XXIII

Chapter 1 Introduction 1

1.1 Overview 1
1.2 Background of the Moving Load Problem 1
1.3 Models for the Vehicle–Bridge System 3
1.3.1 Continuous Beam under Moving Loads 3
1.3.1.1 Moving Force, Moving Mass and Moving Oscillator 3
1.3.1.2 Multi-span Beam 4
1.3.1.3 Timoshenko Beam 5
1.3.1.4 Beam with Crack 5
1.3.1.5 Prestressed Beam 6
1.3.2 Continuous Plate under Moving Loads 6
1.3.2.1 Plate Models 7
1.3.2.2 Moving Forces 7
1.3.2.3 Quarter-truck Model 8
1.3.2.4 Half-truck Model 8
1.4 Dynamic Analysis of the Vehicle–Bridge System 9
1.4.1 Methods based on Modal Superposition Technique 9
1.4.2 Methods based on the Finite Element Method 10
1.5 The Load Identification Techniques 12
1.5.1 The Weigh-In-Motion Technique 12
1.5.2 The Force Identification Techniques 13
1.5.3 The Moving Force Identification Techniques 14
1.6 Problem Statement on the Moving Load Identification 17
1.7 Model Condensation Techniques 20
1.8 Summary 24

Part I – Moving Load Problems

Chapter 2 Dynamic Response of Multi-span Continuous Beams under Moving Loads 27

2.1 Introduction 27
2.2 Multi-span Continuous Beam 27
2.2.1 The Exact Solution 28
2.2.1.1 Free Vibration 28
2.2.1.2 Dynamic Behavior under Moving Loads 30
2.2.2 Solution with Assumed Modes 31
2.2.2.1 Assumed Modes for a Uniform Beam 34
2.2.2.2 Assumed Modes for a Non-uniform Beam 34
2.2.3 Precise Time Step Integration versus Newmark-Beta Method 35
2.2.3.1 Newmark-Beta Method 35
2.2.3.2 Precise Time Step Integration Method 36
2.3 Multi-span Continuous Beam with Elastic Bearings 39
2.3.1 Free Vibration 41
2.3.2 Dynamic Behavior under Moving Loads 43
2.4 Summary 44

Chapter 3 Dynamic Response of Orthotropic Plates under Moving Loads 45

3.1 Introduction 45
3.2 Orthotropic Plates under Moving Loads 45
3.2.1 Free Vibration 45
3.2.2 Dynamic Behavior under Moving Loads 49
3.2.3 Numerical Simulation 50
3.2.3.1 Natural Frequency of Orthotropic Plates 50
3.2.3.2 Simply Supported Beam-Slab Type Bridge Deck under Moving Loads 50
3.3 Multi-span Continuous Orthotropic Plate under Moving Loads 54
3.3.1 Dynamic Behavior under Moving Loads 55
3.3.2 Modal Analysis of Multi-span Continuous Plates 56
3.3.3 Numerical Examples 58
3.4 Summary 58

Chapter 4 Application of Vehicle–Bridge Interaction Dynamics 59

4.1 Introduction 59
4.2 Bridge Dynamic Response 59
4.2.1 Vehicle and Bridge Models 60
4.2.2 Vehicle–Bridge Interaction 60
4.2.3 Road Surface Roughness 65
4.2.4 Braking of Vehicle 65
4.2.5 Computational Algorithm 66
4.2.6 Numerical Simulation 66
4.3 Dynamic Loads on Continuous Multi-Lane Bridge Decks from Moving Vehicles 75
4.3.1 Bridge Model 76

4.3.2 Vehicle Model 76
4.3.3 Vehicle–Bridge Interaction 78
4.4 Impact Factors 79
4.4.1 Dynamic Loading from a Single Vehicle 80
4.4.2 Dynamic Loading from Multiple Vehicles 85
4.5 Summary 88

Part II – Moving Load Identification Problems

Chapter 5 Moving Force Identification in Frequency–Time Domain 91

5.1 Introduction 91
5.2 Moving Force Identification in Frequency–Time Domain 91
5.2.1 Equation of Motion 91
5.2.2 Identification from Accelerations 93
5.2.3 Solution in Time Domain 95
5.2.4 Identification from Bending Moments and Accelerations 96
5.2.5 Regularization of the Solution 97
5.3 Numerical Examples 99
5.3.1 Single Force Identification 100
5.3.2 Two Forces Identification 101
5.4 Laboratory Experiments with Two Moving Loads 106
5.4.1 Experimental Setup 106
5.4.2 Experimental Procedure 108
5.4.3 Experimental Results 109
5.5 Summary 112

Chapter 6 Moving Force Identification in Time Domain 113

6.1 Introduction 113
6.2 Moving Force Identification – The Time Domain Method (TDM) 114
6.2.1 Theory 114
6.2.1.1 Equation of Motion and Modal Superposition 114
6.2.1.2 Force Identification from Bending Moments 115
6.2.1.3 Identification from Accelerations 117
6.2.1.4 Identification from Bending Moments and Accelerations 119
6.2.2 Simulation Studies 120
6.2.3 Experimental Studies 122
6.2.4 Discussions 125
6.3 Moving Force Identification – Exact Solution Technique (EST) 125
6.3.1 Beam Model 125
6.3.1.1 Identification from Strains 126
6.3.1.2 Identification from Accelerations 128
6.3.1.3 Statement of the Problem 129
6.3.2 Plate Model 129
6.3.2.1 Identification from Strains 131
6.3.2.2 Identification from Accelerations 133
6.3.2.3 Computation Algorithm 134

6.3.3 Numerical Examples 135
6.3.3.1 Beam Model 135
6.3.3.2 Two-dimensional Plate Model 144
6.3.4 Laboratory Studies 153
6.3.4.1 Beam Model 153
6.3.4.2 Plate Model 159
6.4 Summary 171

Chapter 7 Moving Force Identification in State Space 173

7.1 Introduction 173
7.2 Method I – Solution based on Dynamic Programming 173
7.2.1 State–Space Model 173
7.2.2 Formulation of Matrix G for Two Moving Loads Identification 175
7.2.3 Problem Statement 175
7.2.4 Computation Algorithm 176
7.2.5 Numerical Examples 178
7.2.5.1 Single-Force Identification 179
7.2.5.2 Two-Forces Identification 180
7.2.6 Experiment and Results 183
7.2.6.1 Single-Force Identification 184
7.2.6.2 Two-Forces Identification 186
7.2.7 Discussions on the Performance of Method I 187
7.3 Method II – Solution based on Regularization Algorithm 188
7.3.1 Discrete Time State–Space Model 188
7.3.2 Moving Load Identification 192
7.3.3 Numerical Studies 193
7.3.3.1 Validation of Method II 195
7.3.3.2 Study on the Effects of Sensor Type and Location 196
7.3.3.3 Further Studies on the Sensor Location Effect and Velocity Measurement 198
7.3.3.4 Effect of the Aspect Ratio of the Bridge Deck 201
7.3.3.5 Further Studies on the Effect of Noise in Different Types of Measurements 202
7.3.4 Experimental Studies 204
7.3.4.1 Experimental Set-up 204
7.3.4.2 Axle Loads and Wheel Loads Identification 204
7.3.5 Comparison of the Two State–Space Approaches 206
7.4 Summary 208

Chapter 8 Moving Force Identification with Generalized Orthogonal Function Expansion 209

8.1 Introduction 209
8.2 Orthogonal Functions 209
8.2.1 Series Expansion 209
8.2.2 Generalized Orthogonal Function 210
8.2.3 Wavelet Deconvolution 211
8.3 Moving Force Identification 213

8.3.1 Beam Model 213
8.3.1.1 Generalized Orthogonal Function Expansion 213
8.3.1.2 Moving Force Identification Theory 214
8.3.2 Plate Model 215
8.4 Applications 217
8.4.1 Identification with a Beam Model 217
8.4.1.1 Single-Span Beam 217
8.4.1.2 Two-Span Continuous Beam 219
8.4.2 Identification with a Plate Model 221
8.4.2.1 Study on the Noise Effect 222
8.4.2.2 Identification with Incomplete Modal Information 223
8.4.2.3 Effects of Travel Path Eccentricity 224
8.5 Laboratory Studies 226
8.5.1 Beam Model 226
8.5.1.1 Experimental Setup and Measurements 226
8.5.1.2 Force Identification 226
8.5.2 Plate Model 227
8.5.2.1 Experimental Set-up 227
8.5.2.2 Wheel Load Identification 228
8.5.2.3 Effect of Unequal Number of Modes in the Response and in the Identification 230
8.6 Summary 233

Chapter 9 Moving Force Identification based on Finite Element Formulation 235

9.1 *Introduction* 235
9.2 Moving Force Identification 235
9.2.1 Interpretive Method I 235
9.2.1.1 Predictive Analysis 235
9.2.1.2 Interpretive Analysis 236
9.2.2 Interpretive Method II 236
9.2.3 Regularization Method 239
9.2.3.1 Equation of Motion 239
9.2.3.2 Vehicle Axle Load Identification from Strain Measurements 241
9.2.3.3 Regularization Algorithm 243
9.3 Numerical Examples 244
9.3.1 Effect of Discretization of the Structure and Sampling Rate 244
9.3.2 *Effect of Number of Sensors and Noise Level* 245
9.4 Laboratory Verification 247
9.4.1 Experimental Set-up 247
9.4.2 Identification from Measured Strains 247
9.5 Comparative Studies 249
9.5.1 Effect of Noise Level 249
9.5.2 Effect of Modal Truncation 251
9.5.3 Effect of Number of Measuring Points 253
9.5.4 Effect of Sampling Frequency 253
9.6 Summary 255

Chapter 10 Application of Vehicle–Bridge Interaction Force Identification 257

10.1 Merits and Disadvantages of Different Moving Force Identification Techniques 257
10.2 Practical Issues on the Vehicle–Bridge Interaction Force Identification 258
10.2.1 Bridge Weigh-In-Motion 258
10.2.2 Moving Force Identification Techniques 259
10.2.2.1 Access to Available Data 260
10.2.2.2 Accuracy of Available Data 261
10.3 Further Comparison of the FEM Formulation and the EST Method in the Vehicle–Bridge Interaction Identification 262
10.3.1 Effect of Road Surface Roughness and Moving Speed 263
10.3.2 Identification of Moving Loads on a Bridge Deck with Varying Speeds 264
10.3.3 Identification with Incomplete Vehicle Speed Information 267
10.4 Dynamic Axle and Wheel Load Identification 268
10.4.1 Dynamic Axle Load Identification 268
10.4.1.1 Study 1: Effect of Number of Modes 268
10.4.1.2 Study 2: Effect of Measuring Locations 270
10.4.1.3 Study 3: Effect of Load Eccentricities 273
10.4.2 Wheel Load Identification 275
10.4.2.1 Study 4: Effect of Measuring Locations 275
10.4.2.2 Study 5: Effect of Load Eccentricities 278
10.4.2.3 Study 6: Effect of Number of Modes 280
10.5 Modifications and Special Topics on the Moving Load Identification Techniques 281
10.5.1 First Order Hold Discrete versus Zeroth Order Hold Discrete 282
10.5.1.1 Zeroth-Order Hold Discrete Method in Response Analysis 282
10.5.1.2 Triangle First-Order Hold Discrete Method 284
10.5.2 First Order Regularization versus Zeroth Order Regularization 286
10.5.2.1 Tikhonov Regularization 286
10.5.2.2 First-Order Tikhonov Regularization 287
10.6 Summary 288

Chapter 11 Concluding Remarks and Future Directions 289

11.1 State of the Art 289
11.2 Future Directions 290
11.2.1 Effect of Uncertainties on Moving Force Identification 290
11.2.2 Moving Force Identification with Complex Structures 291
11.2.3 Integrated Bridge Weigh-In-Motion with Structural Health Monitoring 291
