

# Polyvinyl Alcohol: Materials, Processing and Applications

Vannessa Goodship and  
Daniel Jacobs

Volume 16, Number 11, 2005

*Expert overviews covering the  
science and technology of rubber  
and plastics*

# Contents

1. Introduction .....	3
2. Application Scope .....	4
3. Manufacture .....	6
4. Polymer Chemistry .....	7
4.1 Viscosity in Solution .....	7
5. Water Solubility .....	8
6. PVAL Film Properties .....	9
6.1 Barrier Properties .....	9
6.2 Other Film Properties .....	10
6.2.1 Mechanical Properties .....	10
6.2.2 Plasticiser Effects .....	10
6.2.3 Oil and Solvent Resistance .....	10
6.2.4 Water Sensitivity and Hygroscopy .....	10
6.2.5 Adhesion Characteristics .....	10
6.2.6 Antistatic .....	10
7. Solution Processing .....	10
8. Melt Processing .....	11
8.1 Extrusion .....	12
8.2 Injection Moulding .....	12
8.3 Film Moulding .....	12
8.4 Blow Moulding .....	13
9. Packaging .....	13
9.1 Active Packaging .....	13
10. PVAL in Medicine: Hydrogels .....	13
11. Biopolymers .....	14
12. Blends .....	15
13. Blends of PVAL .....	15
13.1 PVAL-Starch Blends .....	15
13.2 Other Blends .....	16
13.2.1 PVAL/Gelatin Blends .....	16

14. Degradability .....	17
14.1 Biodegradable Plastics .....	18
14.2 Oil-Based Naturally Degradable Polymers.....	18
14.3 Photo-degradable Plastics .....	18
15. Plastics and Biodegradable Plastics Disposal .....	19
15.1 Composting.....	20
15.2 Incineration .....	21
15.3 Landfilling.....	21
16. Conclusion.....	21
References.....	22
Abbreviations and Acronyms .....	22
Subject Index .....	00
Company Index.....	00
