# IRONMAKING *and* STEELMAKING

THEORY  
AND  
PRACTICE

Ahindra Ghosh  
Amit Chatterjee

# Contents

Preface

xix

## Part A GENERAL

---

<b>1. Introduction</b>	<b>1-23</b>
1.1 Early History of Iron (Steel)	3
1.1.1 Meteoric Iron and Wrought Iron	3
1.1.2 Cast Iron	4
1.1.3 Evolution of Ironmaking in Europe	4
1.1.4 Early History of Steelmaking before the Advent of Modern Processes	6
1.1.5 Iron and Steel Heritage of India	7
1.2 Evolution of Ironmaking Technology Since 1880	8
1.2.1 The Developing Blast Furnace	8
1.2.2 Alternative Ironmaking Processes	11
1.3 Steelmaking Since Henry Bessemer	13
1.3.1 Bessemer Process	13
1.3.2 Open Hearth Process	15
1.3.3 Electric Furnace Steelmaking	15
1.3.4 Basic Oxygen Steelmaking	16
1.3.5 Secondary Steelmaking and Continuous Casting of Steel	17
1.4 Present Status of the World Steel Industry	18
1.4.1 Classification	18
1.4.2 World Production of Steel	19
1.5 Steelmaking in India	19
1.6 Environmental Pollution and Control	20
1.6.1 Steps Taken by the Steel Industry	20
1.6.2 Forms of Pollution	22
1.7 Concluding Remarks	23
References	23
<b>2. Overview of Blast Furnace Ironmaking</b>	<b>24-38</b>
2.1 Introduction	24
2.1.1 Improvements Made in Blast Furnace Technology	25
2.2 Blast Furnace Reactions and Process in a Nutshell	25

2.3	General Constructional Features of the Furnace	27
2.3.1	Different Regions within a Blast Furnace	28
2.3.2	Size of Blast Furnace	30
2.4	Performance of Blast Furnace	31
2.5	Blast Furnace Refractory Lining	32
2.6	Charging of Solid Materials from the Top	33
2.7	Blast Furnace Plant and Accessories	37
2.7.1	Hot Blast Stoves	37
	<i>References</i>	38

### 3. Overview of Modern Steelmaking

39–48

3.1	Introduction	39
3.2	Methods Presently Used for Steel Production	39
3.3	Oxygen Steelmaking	40
3.3.1	Top-blown Converter Process	40
3.3.2	Bottom-blown Converters (Q-BOP/OBM)	41
3.3.3	Bath Agitated Processes	42
3.4	Electric Steelmaking	43
3.4.1	Electric Arc Furnace (EAF)	43
3.4.2	Electric Induction Furnaces	44
3.5	Secondary Steelmaking	44
3.5.1	Ladle Stirring	46
3.5.2	Injection Processes	46
3.5.3	Vacuum Processes	46
3.5.4	Reheating Processes	46
3.6	Continuous Casting	47

### 4. General Physicochemical Fundamentals

49–80

4.1	Introduction	49
4.2	Chemical Equilibrium	49
4.2.1	Activity, Free Energy, Chemical Potential and Equilibrium	50
4.2.2	Free Energy and Equilibrium	52
4.2.3	Oxidation–Reduction Reactions	52
4.3	Activity vs. Composition Relationships	56
4.3.1	Introduction	56
4.3.2	Ideal, Non-ideal and Regular Solutions	57
4.3.3	Activities in Molten Slag Solutions	58
4.3.4	Activity–Composition Relationships in Dilute Solutions	58
4.4	Structure and Physicochemical Properties of Melts	64
4.4.1	Properties of Liquid Iron and Steel	64
4.4.2	Structure and Physicochemical Properties of Slag Melts	66
4.4.3	Slag Basicity and Capacities	69
4.4.4	Slag Models	71
4.5	Kinetics, Mixing and Mass Transfer	73
4.5.1	Introduction	73
4.5.2	Interfacial Chemical Reaction	74
4.5.3	Diffusion	75
4.5.4	Turbulence and Mixing in Fluids	76
4.5.5	Convective Mass Transfer at Interface	76
4.5.6	Enhancement of Process Rates	78
	<i>References</i>	80

---

**Part B BLAST FURNACE IRONMAKING**

---

<b>5. Physical Chemistry of Blast Furnace Reactions</b>	<b>83–110</b>
5.1 Thermodynamics of the Carbon–Oxygen Reaction 83	
5.1.1 Combustion of Coke in the Tuyere Zone 83	
5.1.2 C–CO <sub>2</sub> –CO Reaction 84	
5.2 Gas–Solid Reaction Equilibria in the Blast Furnace Stack 86	
5.2.1 The Fe–O System 86	
5.2.2 Thermodynamics of Reduction of Iron Oxides by Carbon Monoxide 86	
5.2.3 Dissociation of Limestone 89	
5.2.4 Reactions of Hydrogen in the Stack 89	
5.3 Kinetics of Reactions in the Stack 91	
5.3.1 Kinetics of Reduction of Iron Oxides by CO and H <sub>2</sub> 92	
5.3.2 Kinetics of Gasification of Carbon by CO <sub>2</sub> 95	
5.3.3 Kinetics of Reduction of FeO by Carbon 96	
5.3.4 Direct and Indirect Reduction in the Blast Furnace 97	
5.4 Reactions and Phenomena in the Blast Furnace Bosh and Hearth 99	
5.4.1 Blast Furnace Slag—Composition and Viscosity 100	
5.4.2 Reaction of Silicon 102	
5.4.3 Reaction of Sulphur 106	
5.4.4 Reactions of Manganese and Titanium 109	
<i>References</i> 110	
<b>6. Thermal and Chemical Features of the Blast Furnace</b>	<b>111–125</b>
6.1 Introduction 111	
6.1.1 Mass and Heat Balances 111	
6.1.2 Regionwise Heat and Mass Balances 114	
6.2 Tuyere Flame Temperature 115	
6.2.1 RAFT Calculations 116	
6.2.2 Tuyere Coal Injection 118	
6.3 Thermal and Chemical Reserve Zones 119	
6.3.1 Concept of an Ideal Blast Furnace 119	
6.3.2 Reichardt's Diagram and Thermal Reserve Zone 120	
6.3.3 Chemical Reserve Zone 121	
6.4 The Rist Diagram 122	
6.4.1 Rist Diagram Based on Oxygen Balance Only 122	
6.4.2 Rist Diagram Based on Mass and Heat Balance 123	
6.4.3 Rist Diagram Based on Oxygen and Heat Balance, and Fe–Fe <sub>x</sub> O–Gas Equilibrium 124	
<i>References</i> 125	
<b>7. Internal Zones and Gas Flow in Blast Furnaces</b>	<b>126–137</b>
7.1 Introduction 126	
7.2 The Six Internal Zones 128	
7.3 Aerodynamic Features of the Granular Zone 130	
7.3.1 Ergun Equation for Packed Beds 130	
7.3.2 Bed Fluidisation and Elutriation 132	
7.3.3 Gas Flow Through the Granular Zone of a Blast Furnace 132	
7.4 Gas Flow in Wet Zones 135	
7.5 Concluding Remarks 136	
<i>References</i> 137	

**8. Raw Materials I: Coke****138-156**

- 8.1 Introduction 138
  - 8.1.1 Availability of Coking Coal 138
  - 8.1.2 Types of Coal Available 139
- 8.2 Chemical Characteristics of Coals for Cokemaking 139
  - 8.2.1 Proximate Analysis 139
  - 8.2.2 Ultimate Analysis 141
- 8.3 Petrographic Characteristics of Coals for Cokemaking 142
  - 8.3.1 Macerals and Mineral Matter 142
  - 8.3.2 Reflectance (Rank) of Coal 142
- 8.4 Other Important Characteristics 143
- 8.5 Selection of Coals for Cokemaking 144
- 8.6 Assessment of Coke Quality 146
  - 8.6.1 Room Temperature Strength 146
  - 8.6.2 High Temperature Characteristics 147
- 8.7 Processes Used for Cokemaking 148
  - 8.7.1 Conventional By-product Coke Ovens 149
  - 8.7.2 Non-recovery Ovens 151
- 8.8 Pre-carbonisation Techniques 154
  - 8.8.1 Pre-heating of Coal 154
  - 8.8.2 Briquette Blending of Coal 155
  - 8.8.3 Selective Crushing of Coal 155
  - 8.8.4 Stamp-charging 155
- 8.9 Alternative Coking Methods 156
- References 156

**9. Raw Materials II: Iron Ore and Agglomerates****157-178**

- 9.1 Introduction 157
- 9.2 Occurrence of Iron Ore 157
  - 9.2.1 Iron Ore Reserves of India 158
- 9.3 Beneficiation of Iron Ore 159
- 9.4 The Sintermaking Process 159
  - 9.4.1 Bedding and Blending 159
  - 9.4.2 Granulation 160
  - 9.4.3 Sintering 161
  - 9.4.4 Feed Preparation and Product Handling 162
- 9.5 Fundamentals of Sintering of Iron Ores 162
  - 9.5.1 Sintering Phenomena 162
  - 9.5.2 Heat Transfer during Sintering 164
  - 9.5.3 Sinter Productivity 165
  - 9.5.4 Structure of Sinter 166
  - 9.5.5 Influence of Sinter Chemistry 167
- 9.6 Pelletisation 167
- 9.7 Physical and Chemical Characterisation of Lump Ore/Sinter/Pellets 170
  - 9.7.1 Physical Testing 170
  - 9.7.2 Chemical Characterisation 171
  - 9.7.3 Thermal Analysis 171

9.8	Metallurgical Tests	172	
9.8.1	Compression and Tumbler Strength	173	
9.8.2	Reduction Behaviour	173	
9.8.3	Reducibility	174	
9.8.4	Reduction under Load	174	
9.8.5	Softening–Melting Test	175	
9.9	Recycling of Materials in the Blast Furnace	176	
	<i>References</i>	178	
<b>10.</b>	<b>Blast Furnace Productivity, Fuel Efficiency and Modern Developments</b>		<b>179–202</b>
10.1	Introduction	179	
10.1.1	Efficiency of Operation	180	
10.2	Fundamentals of Blast Furnace Productivity	181	
10.2.1	The Concept of Productivity	182	
10.2.2	Specific Gas Volume Requirement	182	
10.2.3	Gas Flow through the Furnace	183	
10.2.4	Furnace Irregularities	184	
10.3	Effect of Agglomerated Iron Oxides on Productivity	186	
10.3.1	Use of Sinter	186	
10.3.2	Use of Pellets in Burden	187	
10.3.3	Reducibility	188	
10.3.4	Reduction–Degradation Index (RDI)	190	
10.3.5	Softening–Melting Characteristics	191	
10.4	Coke Quality for Improved Productivity and Fuel Efficiency	192	
10.5	High Top Pressure (HTP) Operation	194	
10.5.1	Influence of HTP on Productivity and Fuel Efficiency	195	
10.5.2	Some Other Performance Improvements through Use of HTP	196	
10.6	The Bell-Less Top	197	
10.7	Pulverised Coal Injection (PCI)	198	
10.8	Concluding Remarks	200	
	<i>References</i>	201	
<b>11.</b>	<b>Blast Furnace Products and Their Utilisation</b>		<b>203–211</b>
11.1	Introduction	203	
11.2	Composition of Hot Metal	204	
11.2.1	Overall Input and Output Considerations	204	
11.2.2	Silicon Control	205	
11.2.3	Sulphur Control	205	
11.2.4	Phosphorus Content of Hot Metal	205	
11.3	Handling Hot Metal and Slag	206	
11.3.1	Tapping of Hot Metal and Slag	206	
11.3.2	Transportation of Hot Metal	207	
11.4	Blast Furnace Slag and Its Utilisation	208	
11.4.1	Slag Characteristics	208	
11.4.2	Usage of Blast Furnace Slag	209	
11.5	Blast Furnace Gas and Its Utilisation	209	
11.5.1	Cleaning of Blast Furnace Gas	210	
	<i>Reference</i>	211	

<b>12. Blast Furnace Modelling and Control</b>	<b>212–222</b>
12.1 Introduction	212
12.2 General Approach	212
12.3 Process Modelling	214
12.3.1 Blast Furnace Models and Their Purpose	214
12.3.2 Types of Models Available	215
12.4 Steps Involved in Mathematical Modelling	215
12.4.1 General Formulation	215
12.4.2 Identification of Framework	215
12.5 Important Process Models	217
12.5.1 Burden Distribution Model	217
12.5.2 Thermochemical Model	218
12.5.3 Model of the Raceway	219
12.5.4 Freeze-line Model of the Hearth	221
12.6 Real-time Process Simulator	222
<i>Reference</i>	222

---

## Part C ALTERNATIVE IRONMAKING

---

<b>13. Sponge Ironmaking</b>	<b>225–240</b>
13.1 Introduction	225
13.2 Processes of Making Sponge Iron	225
13.3 Properties of Sponge Iron	226
13.4 Uses of Sponge Iron	227
13.5 Coal-based Sponge Iron Processes	228
13.5.1 Sponge Iron Production in Rotary Kilns	228
13.5.2 Coal-based Processes Using Rotary Hearth Furnaces	230
13.6 Gas-based Processes	231
13.6.1 Reforming of Natural Gas	232
13.6.2 Gas-based Direct Reduction in Fluidised Beds—Finmet Process	232
13.6.3 Gas-based Reduction in Stationary Retorts (HYL Process—Now Referred to as HYL I)	234
13.6.4 Gas-based Shaft Furnace Processes	235
<i>Reference</i>	240
<b>14. Smelting Reduction</b>	<b>241–262</b>
14.1 Introduction	241
14.2 Raw Materials for Smelting Reduction	241
14.3 Fundamentals of Smelting Reduction	242
14.4 History of Smelting Reduction	244
14.4.1 The Early Stages	244
14.4.2 The Second Stage	244
14.4.3 Commercialisation of SR	244
14.5 SR Process Categorisation	245
14.5.1 Classification Based on the Number of Stages Involved	245
14.5.2 Classification Based on the Type of Furnace Used for Smelting	248

14.6	Salient Features of Important SR Processes	249
14.6.1	Corex Process	249
14.6.2	Hismelt Process	254
14.6.3	Romelt Process	256
14.6.4	Finex Process	257
14.6.5	Fastmelt Process	258
14.6.6	ITmk3	259
14.6.7	Tecnored Process	260
14.7	Mini Blast Furnace	261
	<i>Reference</i>	262

---

## Part D STEELMAKING

---

<b>15. Physical Chemistry of Primary Steelmaking</b>	<b>265–284</b>	
15.1	Introduction	265
15.2	Reactions and Heat Effects	266
15.3	Primary Steelmaking Slags	270
15.3.1	Phase Diagram and Activity-Composition Diagram	270
15.3.2	Other Properties of Primary Steelmaking Slags	274
15.4	The Reaction Equilibria	274
15.4.1	Introduction	274
15.4.2	Oxidation of Iron	275
15.4.3	Reactions of Carbon	275
15.4.4	Oxidation of Silicon	277
15.4.5	Reaction of Phosphorus	277
15.5	Mass Transfer and Kinetics in Steelmaking	282
	<i>References</i>	284
<b>16. BOF Plant Practice</b>	<b>285–305</b>	
16.1	Introduction	285
16.2	BOF Operation	285
16.3	BOF Shop Layout and Individual Converter Components	286
16.3.1	BOF Vessel Design and Refractory Lining	286
16.3.2	The Lance	288
16.3.3	Gas Cleaning System	288
16.3.4	Engineering Features of BOF Shops	289
16.4	Refining	290
16.5	Major Inputs for BOF Steelmaking	291
16.5.1	Hot Metal	291
16.5.2	Coolants	291
16.5.3	Flux Materials	292
16.5.4	Oxygen	292
16.6	Pre-treatment of Hot Metal Prior to Steelmaking	292
16.6.1	Objectives of Pre-treatment	293
16.6.2	Removal of Silicon	293
16.6.3	Desulphurisation	294
16.6.4	Dephosphorisation	295

16.7	Reagents Used for Pre-treatment	295
16.7.1	Soda-ash	295
16.7.2	Mixture of Soda-ash and Sodium Sulphate	296
16.7.3	Mill Scale, Sinter Fines, etc.	296
16.7.4	Calcium Carbide and Magnesium Granules	296
16.7.5	Injection of Desulphurising Agents	297
16.8	Hot Metal Pre-treatment Station(s)	301
16.8.1	Desiliconisation	301
16.8.2	Desulphurisation	302
16.9	Simultaneous Removal of Sulphur and Phosphorus	303
16.10	General Comments on Pre-treatment	304
	<i>References</i>	305

**17. Metallurgical Features of Oxygen Steelmaking** **306–326**

17.1	Introduction	306
17.2	Interaction of the Oxygen Jet with the Surroundings and the Bath	307
17.2.1	Mechanical Interactions	307
17.2.2	Chemical Interactions between Jet and Bath	309
17.2.3	Chemical–Thermal Interactions of the Jet with the Surroundings	309
17.3	Composition and Temperature Changes During the Blow	310
17.3.1	Slag Path and Lime Dissolution in Slag	312
17.3.2	Kinetics of Lime Dissolution	312
17.4	Kinetics of Carbon–Oxygen Reaction in BOF; Slag–Metal–Gas Interaction	313
17.4.1	Foams and Emulsions in Basic Oxygen Steelmaking	314
17.4.2	Mechanism of Carbon–Oxygen Reaction	315
17.5	Metallurgical Features of Bath Agitated Processes	316
17.5.1	General	316
17.5.2	Some Process Details	318
17.6	Oxygen Bottom Blown Processes	319
17.7	Comparison of Various Basic Oxygen Processes in Terms of Composition Control	321

*References* 326

**18. Process Control for Basic Oxygen Steelmaking** **327–340**

18.1	Introduction	327
18.1.1	Chronology of Developments	327
18.2	Mathematical Models	330
18.2.1	Static Models	330
18.2.2	Dynamic Models	332
18.3	Semi-Dynamic Control	333
18.3.1	The Sub-lance	333
18.3.2	Immersion Carbon Sensor	334
18.3.3	Immersion Oxygen Sensor	335
18.4	Dynamic Control	337
18.4.1	Measurements on Exit Gas	337
18.4.2	Application of Sonic Meter	338
18.5	Concluding Remarks	338

## Part E CASTING OF LIQUID STEEL

---

<b>22. Ingot Casting of Steel</b>	<b>409-422</b>
22.1 Introduction	409
22.2 Fundamentals of Solidification	411
22.2.1 Heat Transfer and Solidification Rate in Ingot Casting	411
22.2.2 Segregation and Crystallisation during Solidification	412
22.3 Classification of Steel Ingots	416
22.3.1 Gas Generation during Freezing	416
22.3.2 Types of Ingots	417
22.4 Ingot Defects and Their Remedies	419
22.4.1 Pipe	419
22.4.2 Blow-hole	419
22.4.3 Columnar Structure Effects	420
22.4.4 Segregation	420
22.4.5 Non-metallic Inclusions	421
22.4.6 Internal Fractures and Hairline Cracks	421
22.4.7 Surface Cracks	422
References	422
<b>23. Continuous Casting of Steel</b>	<b>423-447</b>
23.1 Introduction	423
23.2 Heat Transfer and Solidification in Continuous Casting	424
23.2.1 General Considerations	424
23.2.2 Heat Transfer in the Mould	426
23.2.3 Mould Flux	428
23.2.4 Heat Transfer in Secondary Cooling Zone	429
23.3 Metallurgical Comparison of Continuous Casting with Ingot Casting	430
23.4 Modern Tundish Practice	432
23.4.1 Metallurgical Aspects	432
23.4.2 Tundish Design and Operation for Clean Steel	433
23.5 Current State of Continuous Casting Technology for Steel	434
23.5.1 General Features	434
23.5.2 The Mould and Its Operation	434
23.5.3 Electromagnetic Stirring	436

23.6	Metallurgical Defects and Their Remedies	437
23.6.1	Centreline Macro-segregation and Porosity	437
23.6.2	Cracks	439
23.6.3	Other Defects	441
23.7	Some Special Topics	442
23.7.1	Round Caster and Combination Caster	442
23.7.2	High Speed Casting	443
23.8	Near-Net Shape Casting	444
23.8.1	Thin Slab Casting	445
23.8.2	Strip Casting	446
23.8.3	Beam Blank Casting	446
	References	447

## Part F MISCELLANEOUS

<b>24.</b>	<b>Ironmaking and Steelmaking in India</b>	<b>451–459</b>
24.1	Introduction	451
24.2	Evolution of Global/Indian Steel	452
24.3	India's Potential in Steel	453
24.4	Growth of the Global Steel Industry	454
24.5	Expansion Plans of Indian Steel Producers	454
24.6	Raw Materials Scenario in India	455
24.6.1	Coal for Ironmaking	455
24.6.2	Iron Ore Scenario	455
24.7	Alternative Ironmaking in India	455
24.7.1	Direct Reduction	456
24.7.2	Smelting Reduction	458
