Counterparty credit risk

*The new challenge for
global financial markets*

Introduction	xxi
1 Setting the Scene	1
1.1 Financial risk management	1
1.1.1 Market risk	1
1.1.2 Liquidity risk	2
1.1.3 Operational risk	2
1.1.4 Credit risk	2
1.1.5 Value-at-risk	3
1.1.6 Disadvantages of value-at-risk	3
1.2 The failure of models	4
1.2.1 Why models?	4
1.2.2 Good model, bad model	5
1.3 The derivatives market	6
1.3.1 What is a derivative?	6
1.3.2 Market structure	6
1.4 Risks of derivatives	7
1.4.1 Too big to fail	7
1.4.2 Systemic risk	8
1.4.3 Compensation culture	8
1.4.4 Credit derivatives	9
1.5 Counterparty risk in context	9
1.5.1 What is counterparty risk?	9
1.5.2 Mitigation of counterparty risk	10
1.5.3 Counterparty risk and integration of risk types	10
1.5.4 Counterparty risk and today's derivatives market	11

2	Defining Counterparty Credit Risk	13
2.1	Introducing counterparty risk	13
2.1.1	Origins of counterparty risk	13
2.1.2	Repos	14
2.1.3	Exchange-traded derivatives	14
2.1.4	OTC derivatives	14
2.1.5	Counterparty risk	16
2.1.6	Counterparty risk versus lending risk	17
2.1.7	Mitigating counterparty risk	18
2.1.8	Counterparty risk players	19
2.2	Components and terminology	20
2.2.1	Credit exposure	20
2.2.2	Default probability and credit migration	21
2.2.3	Recovery	22
2.2.4	Mark-to-market	22
2.2.5	Replacement cost	23
2.2.6	Exposure	23
2.2.7	Exposure as a short option position	24
2.2.8	Potential future exposure (PFE)	24
2.3	Controlling counterparty credit risk	25
2.3.1	Trading with high-quality counterparties	25
2.3.2	Cross-product netting	26
2.3.3	Close-out	27
2.3.4	Collateralisation	27
2.3.5	Walkaway features	28
2.3.6	Monolines	29
2.3.7	Diversification of counterparty risk	29
2.3.8	Exchanges and centralised clearing houses	29
2.4	Quantifying counterparty risk	30
2.4.1	Credit lines	30
2.4.2	Pricing counterparty risk	32
2.4.3	Hedging counterparty risk	33
2.4.4	Capital requirements and counterparty risk	34
2.5	Metrics for credit exposure	35
2.5.1	Expected MtM	35
2.5.2	Expected exposure	35
2.5.3	Potential future exposure	36
2.5.4	EE and PFE for a normal distribution	36
2.5.5	Overview of exposure metrics	36
2.5.6	Expected positive exposure	37
2.5.7	Effective EPE	38
2.5.8	Maximum PFE	38
2.6	Summary	38
Appendix 2.A	Characterising exposure for a normal distribution	39

3	Mitigating Counterparty Credit Risk	41
3.1	Introduction	41
3.1.1	Two-way or one-way agreements	41
3.1.2	Standardisation	42
3.2	Default-remote entities	42
3.2.1	High-quality counterparties	42
3.2.2	Special purpose vehicles	42
3.2.3	Central counterparties	43
3.3	Termination and walkaway features	44
3.3.1	Termination events	44
3.3.2	Additional termination events	45
3.3.3	Walkaway features	45
3.4	Netting and close-out	46
3.4.1	Close-out	47
3.4.2	Payment and close-out netting	48
3.4.3	The need for close-out netting	48
3.4.4	The birth of netting	50
3.4.5	Netting agreements	50
3.4.6	The ISDA Master Agreement	50
3.4.7	Product coverage	51
3.4.8	Netting and exposure	51
3.4.9	Advantages and disadvantages of netting	51
3.4.10	Multilateral netting	53
3.5	Netting and exposure	54
3.5.1	Negativity of MtM	54
3.5.2	Impact of correlation	55
3.5.3	Negative MtM of a netting set	57
3.5.4	Positive MtM of a netting set	58
3.6	Collateral	59
3.6.1	The basics of collateralisation	60
3.6.2	Analogy with mortgages	61
3.6.3	Setting up a collateral agreement	61
3.6.4	Valuation agent	62
3.6.5	Types of collateral	63
3.6.6	Coverage of collateralisation	63
3.6.7	Disputes and reconciliations	64
3.7	The mechanics of collateralisation	65
3.7.1	Linkage of collateral parameters to credit quality	65
3.7.2	Margin call frequency	66
3.7.3	Threshold	66
3.7.4	Independent amount	67
3.7.5	Minimum transfer amount	68
3.7.6	Rounding	68
3.7.7	Haircuts	68

3.7.8	Coupons and interest payments	70
3.7.9	Substitution, reuse of collateral and rehypothecation	71
3.7.10	Call-and-return example	71
3.8	Is risk mitigation always a good thing?	73
3.9	Summary	74
Appendix 3.A	EE of independent normal variables	74
4	Quantifying Counterparty Credit Exposure, I	77
4.1	Quantifying credit exposure	77
4.1.1	Mark-to-market + add-ons	78
4.1.2	Semi-analytical methods	79
4.1.3	Monte Carlo simulation	80
4.1.4	Roll-off risk	82
4.2	Typical credit exposures	84
4.2.1	Loans, bonds and repos	84
4.2.2	Swaps	84
4.2.3	FX products	85
4.2.4	Options	85
4.2.5	Credit derivatives	86
4.2.6	Payment frequencies	89
4.2.7	Exercise dates	89
4.3	Models for credit exposure	90
4.3.1	Calibration	91
4.3.2	Risk-neutral or real?	91
4.3.3	Equities	93
4.3.4	FX	94
4.3.5	Commodities	94
4.3.6	Credit spreads	94
4.3.7	Interest rates	95
4.3.8	Advanced models	96
4.3.9	Model validation	97
4.3.10	Correlations	97
4.4	Netting	98
4.4.1	Modelling netting	98
4.4.2	Netting factor	99
4.4.3	Examples	99
4.5	Exposure contributions	101
4.5.1	Marginal EE	102
4.5.2	Simple two-trade marginal EE example	102
4.5.3	Marginal EE and correlation	103
4.5.4	General example	104
4.6	Summary	104
Appendix 4.A	Semi-analytical formula for exposure of a forward contract	105
Appendix 4.B	Computing marginal EE	106

5	Quantifying Counterparty Credit Exposure, II: The Impact of Collateral	107
5.1	Introduction	107
5.2	The impact of collateral on credit exposure	107
5.2.1	Remargin period	107
5.2.2	Potential future exposure with collateral	109
5.2.3	Volatility of exposure	110
5.2.4	Collateral volatility	110
5.2.5	Correlation between collateral and exposure	111
5.3	Modelling collateral	112
5.3.1	Parameters	113
5.3.2	Collateral logic	114
5.4	Full collateralisation	114
5.4.1	Parameters	114
5.4.2	Scenarios	115
5.4.3	Exposure distributions	116
5.4.4	Simple approximation – idealised case	117
5.4.5	Simple approximation – impact of minimum transfer amount	119
5.4.6	Impact of threshold	120
5.4.7	Simple approximation – impact of threshold	121
5.4.8	Operational cost versus reduction of exposure	122
5.5	The risks of collateralisation	123
5.5.1	Operational risk	123
5.5.2	Default risk	124
5.5.3	FX risk	124
5.5.4	Liquidity and liquidation risk	124
5.6	Summary	125
Appendix 5.A	Calculation of collateralised PFE (cash collateral)	125
Appendix 5.B	Calculation of collateralised netted exposure with collateral value uncertainty	126
Appendix 5.C	Mathematical treatment of a collateralised exposure	126
6	Overview of Credit Risk and Credit Derivatives	129
6.1	Defaults, recovery rates, credit spreads and credit derivatives	129
6.1.1	Default rates	130
6.1.2	Recovery rates	130
6.1.3	Credit spreads	132
6.2	Credit derivatives	133
6.2.1	Market growth and uses	133
6.2.2	Credit default swaps (CDSs)	134
6.2.3	Credit-linked notes	135
6.2.4	Asset swaps	135
6.2.5	Linkage between bonds, asset swaps and CDS premiums	136
6.2.6	Contingent credit default swap (CCDS)	138
6.2.7	Fixed and digital CDSs and recovery swaps	138

6.3	Credit default swaps	139
6.3.1	Reference entity and obligation	139
6.3.2	Credit events	139
6.3.3	Settlement of CDS	140
6.3.4	Cheapest-to-deliver option and restructuring	141
6.3.5	Delivery squeeze	143
6.3.6	CDS risks	144
6.3.7	ISDA 2009, Big Bang Protocol, Small Bang Protocol and new trading conventions	146
6.4	Estimating default probability	147
6.4.1	Defining default probability	148
6.4.2	Historical estimation	148
6.4.3	Equity-based approaches	151
6.4.4	Market-implied default probabilities	153
6.5	Portfolio credit derivatives	155
6.5.1	CDS index products	155
6.5.2	Index tranches	156
6.5.3	Super senior risk	159
6.5.4	Collateralised debt obligations	160
6.5.5	CDO investors	161
6.5.6	Rating of CDOs	162
6.5.7	Summary	162
Appendix 6.A	Defining survival and default probabilities	163
Appendix 6.B	Pricing formulas for CDSs and risky bonds	163
Appendix 6.C	Pricing of index tranches	166
7	Pricing Counterparty Credit Risk, I	167
7.1	Pricing counterparty risk	168
7.1.1	Motivation	168
7.1.2	Why pricing counterparty risk is not easy	169
7.1.3	Credit value adjustment (unilateral)	169
7.1.4	Practical CVA formula (no wrong-way risk)	170
7.1.5	CVA as a spread	171
7.1.6	CVA semi-analytical methods	174
7.1.7	How to calculate the EE for CVA	174
7.2	Pricing new trades using CVA	175
7.2.1	CVA formula with collateral	175
7.2.2	CVA formula with netting	176
7.2.3	Netting and trade size	178
7.2.4	Marginal CVA	178
7.2.5	Exotic products	180
7.2.6	Path dependency	181
7.3	Bilateral counterparty risk	181
7.3.1	Background	181
7.3.2	Bilateral CVA	182
7.3.3	Example	183

7.3.4	BCVA formula from credit spread	185
7.3.5	BCVA or CVA?	186
7.3.6	BCVA and break clauses	188
7.3.7	BCVA and unwinding trades	189
7.3.8	Walkaway features	190
7.4	Summary	191
Appendix 7.A	Deriving the equation for credit value adjustment (CVA)	192
Appendix 7.B	Approximation to the CVA formula in the case of no wrong-way risk	194
Appendix 7.C	Approximation linking CVA formula to credit spread	195
Appendix 7.D	Specific approximations to the CVA formula for individual instruments	195
Appendix 7.E	Calculation of CVA increase in the presence of netting	197
Appendix 7.F	Deriving the equation for bilateral credit value adjustment (BCVA)	197
Appendix 7.G	Approximation linking CVA formula to credit spreads for bilateral CVA	199
Appendix 7.H	Deriving the equation for BCVA under the assumption of a bilateral walkaway clause	200
8	Pricing Counterparty Credit Risk, II: Wrong-way Risk	203
8.1	Introduction	203
8.2	Wrong-way risk	203
8.2.1	Empirical evidence of wrong-way risk effects	205
8.2.2	Right-way risk	205
8.2.3	Examples of wrong-way risk trades	206
8.2.4	Wrong-way risk and CVA	207
8.3	Measuring wrong-way risk	208
8.3.1	Correlation is not the same as dependence	208
8.3.2	Simple example	208
8.3.3	Forward trade example	209
8.3.4	Foreign exchange example	212
8.3.5	Comparison of wrong-way risk approaches	212
8.3.6	Risky option position	213
8.3.7	Wrong-way risk and bilateral counterparty risk	216
8.3.8	Wrong-way risk and collateral	217
8.4	Counterparty risk in CDSs	217
8.4.1	CDS payoff under counterparty default	217
8.4.2	Quantifying CVA for a CDS	218
8.4.3	Buying CDS protection	219
8.4.4	Selling CDS protection	221
8.4.5	Bilateral CDS counterparty risk	222
8.5	Counterparty risk in structured credit	222
8.5.1	Overview	222
8.5.2	Credit indices	223
8.5.3	Index tranches	224

8.5.4	Super senior tranches	225
8.5.5	Counterparty risk distribution across capital structure	226
8.5.6	Impact of upfront tranche payments	228
8.6	Counterparty risk and gap risk	229
8.6.1	Motivation	229
8.6.2	TRS transactions	229
8.6.3	Leveraged CLN	230
8.6.4	Converting counterparty risk to gap risk	230
8.7	Super senior risk	232
8.7.1	The leveraged super senior (LSS) trade	232
8.7.2	Monolines	235
8.7.3	Credit derivatives products companies (CDPCs)	236
8.7.4	The value of protection purchased from monolines and CDPCs	237
8.8	Summary	238
Appendix 8.A	Computing the EE of a typical forward exposure with correlation to a time of default	239
Appendix 8.B	Formula for a risky option	240
Appendix 8.C	Formula for pricing a CDS contract with counterparty risk	240
Appendix 8.D	Pricing of a leveraged super senior tranche	242
9	Hedging Counterparty Risk	243
9.1	Introduction	243
9.2	Hedging and pricing	244
9.3	Hedging a risky derivative position	245
9.4	Traditional hedging of bonds, loans and repos	246
9.5	Risk-neutral or real parameters?	248
9.5.1	Futures prices and future spot prices	249
9.5.2	Drift	250
9.5.3	Volatility	252
9.5.4	Correlation	253
9.6	Components of CVA	253
9.7	Recovery risk	254
9.7.1	Basis risk	255
9.7.2	CVA sensitivity to recovery	256
9.7.3	Recovery swaps	256
9.8	Static hedging	257
9.8.1	Static CDS hedging of exposures	257
9.8.2	Contingent credit default swaps (CCDSs)	258
9.9	Dynamic credit hedging	260
9.9.1	Credit delta	260
9.9.2	Gamma	261
9.9.3	Jump-to-default risk	262
9.9.4	Credit hedging with indices	264

9.10	Exposure	264
9.10.1	Hedging spot rates	264
9.10.2	Spot rates and drift	266
9.10.3	Volatility	267
9.10.4	Spot rate sensitivity under volatility hedging	270
9.11	Cross-dependency	270
9.11.1	Cross-gamma and wrong-way risk	270
9.11.2	Hedging wrong-way risk	271
9.11.3	Monolines	271
9.11.4	Hedging bilateral counterparty risk	273
9.11.5	Impact of collateralisation on hedging	275
9.12	Aggregation of sensitivities	277
9.13	Summary	278
Appendix 9.A	Example of calculation of CVA Greeks	279

10	Portfolio Models and Economic Capital	281
10.1	Introduction	281
10.2	Joint default	282
10.2.1	Double-default approach	282
10.2.2	Merton-style approach	283
10.2.3	Impact of correlation	284
10.2.4	Impact on CCDS	284
10.2.5	Distribution of losses	286
10.2.6	Impact of random exposure	286
10.2.7	Impact of correlated exposures	287
10.3	Credit portfolio losses	287
10.3.1	Loss distributions and unexpected loss	289
10.3.2	Impact of correlation	290
10.3.3	Default-only approaches	291
10.4	The impact of stochastic exposure	291
10.4.1	Impact of random exposure on unexpected loss	292
10.4.2	The alpha factor	293
10.4.3	Example of alpha correction	295
10.4.4	Sensitivity analysis on the alpha factor	296
10.5	Special cases of alpha	296
10.5.1	Correlation of exposures	297
10.5.2	Asymmetric exposure	297
10.5.3	Wrong-way risk	298
10.5.4	What is the correct value of alpha?	300
10.6	Credit migration and mark-to-market	301
10.6.1	The importance of mark-to-market	301
10.6.2	Modelling credit migrations	301
10.6.3	Marking-to-market loans	302
10.6.4	Marking-to-market derivatives	303
10.6.5	Example	303

10.7	Summary	304
Appendix 10.A	Credit portfolio model	305
Appendix 10.B	Simple treatment of wrong-way risk	307
11	Counterparty Risk, Regulation and Basel II	309
11.1	Introduction	309
11.2	The birth of Basel II	310
11.3	Basel II Framework for fixed exposures	311
11.3.1	Overview	311
11.3.2	The advanced IRB approach	311
11.3.3	Asset correlation	312
11.3.4	Maturity factor	313
11.4	Exposure at default and Basel II	313
11.4.1	Current exposure method	314
11.4.2	Standardised method	315
11.4.3	Treatment of repo-style transactions	316
11.5	Basel II internal model method	319
11.5.1	Introduction	319
11.5.2	Effective maturity	319
11.5.3	Exposure at default	320
11.5.4	Defining alpha	321
11.5.5	Effective EPE for collateralised counterparties	322
11.6	Basel II and double-default	323
11.6.1	Background	323
11.6.2	Double-default formula	324
11.6.3	Double-default adjustment factor	324
11.6.4	Accounting for double-default for derivatives	326
11.7	Summary	327
Appendix 11.A	Effective remaining maturity	328
Appendix 11.B	The asset correlation and maturity adjustment formulas in the advanced IRB approach of Basel II	329
Appendix 11.C	Netting and collateral treatment under the current exposure method (CEM) of Basel II	329
Appendix 11.D	Definition of effective EPE	330
Appendix 11.E	Double-default treatment of hedged exposures in Basel II	331
12	Managing Counterparty Risk in a Financial Institution	333
12.1	Introduction	333
12.2	Counterparty risk in financial institutions	333
12.2.1	Components	333
12.2.2	Counterparty risk group	335
12.2.3	Responsibilities	335
12.2.4	Organisational structure	336
12.2.5	Mechanics of pricing	336
12.2.6	Default settlement	337
12.2.7	Technology aspects	337

12.3	Insurance company or trading desk?	339
12.3.1	Background	339
12.3.2	Insurance approach	340
12.3.3	Trading desk approach	342
12.3.4	Profit centre or not?	343
12.3.5	Finding the balance	343
12.4	How to calculate credit charges	343
12.4.1	Real or risk-neutral?	343
12.4.2	Default probabilities	344
12.4.3	Drift, volatility and correlations	344
12.4.4	Mark-to-market	345
12.4.5	Bilateral credit charges	345
12.5	How to charge for counterparty risk	345
12.5.1	Lookup tables	346
12.5.2	Stand-alone pricing	346
12.5.3	Pricing incorporating risk mitigants	346
12.5.4	Allocation of CVA	347
12.6	Summary	349
13	Counterparty Risk of Default-remote Entities	351
13.1	The triple-A counterparty	351
13.1.1	The need for institutions with long-term views	352
13.1.2	Derivatives product companies	352
13.1.3	Monolines	353
13.1.4	Credit derivatives products companies	355
13.2	The value of monolines and CDPCs	356
13.2.1	Moral hazard	356
13.2.2	Rating agencies and triple-A entities	356
13.2.3	Credit insurer simple example	357
13.2.4	Suspension modes, downgrades and death spirals	360
13.2.5	Termination mode and run-off	361
13.2.6	The random leverage effect	363
13.2.7	The future for credit insurers	364
13.3	Summary	365
Appendix 13.A	Simple model for a credit insurer	365
Appendix 13.B	The valuation of credit insurer purchased protection	365
14	The Role of a Central Counterparty	369
14.1	Centralised clearing	369
14.1.1	Background	369
14.1.2	Systemic risk in the derivatives markets	370
14.1.3	Historical background to CCPs	371
14.1.4	Bilateral netting versus centralised clearing	372
14.1.5	Novation	373
14.1.6	The operation of a CCP	374
14.1.7	Impact of default of a CCP member	374

14.1.8	Initial margin	375
14.1.9	Reserve funds and loss mutualisation	377
14.2	The viability of centralised clearing	377
14.2.1	The advantage of centralised clearing	378
14.2.2	The disadvantages of centralised clearing	379
14.2.3	Risk homogeneity and asymmetric information	379
14.2.4	Competition	380
14.2.5	Market coverage of a CCP	381
14.2.6	Central counterparties and credit derivatives	384
14.2.7	Under what circumstances will a CCP work?	385
14.3	Conclusions	386
15	The Future of Counterparty Risk	389
15.1	A counterparty risk revolution?	389
15.2	Controlling credit exposure	390
15.3	Collateral management	390
15.4	The too-big-to-fail concept	391
15.5	Credit value adjustment (CVA)	391
15.6	Hedging	392
15.7	Credit derivatives	392
15.8	Central counterparties	392
15.9	The overall challenge	393
	Glossary	395
