Life-Cycle Analysis of Energy Systems

From Methodology to Applications

RSCPublishing

Contents

Chapter 1	Introduction	1
1.1	History	1
1.2	ISO-Based Implementations	9
1.3	The Present Approach	16
	References	19

Part I Methodology

Chapter 2	Life-Cycle Analysis	25
2.1	LCA Basics	26
2.1.1	Defining the Purpose and Scope of LCA	27
2.1.2	Treatment of Import and Export	32
2.2	What to Include in a LCA?	34
2.2.1	Qualitative or Quantitative Estimates of Impacts	40
2.2.2	Treatment of Risk-related Impacts and Accidents in LCA	40
2.3	Choosing the Context	41
2.3.1	Social Context	42
2.4	Aggregation Issues	44
2.5	Chain Calculations	47
2.6	Matrix Calculations	51
2.6.1	Marginal <i>versus</i> Systemic Change	53
2.7	Inventory Building	54
	References	63

Chapter 3	From Life-Cycle Analysis to Life-Cycle Assessment	67
3.1	Communicating with Decision Makers	67
3.2	Monetising Issues	69
3.2.1	Statistical Value of Life	71
3.2.2	Depreciation	73
3.3	Multivariate Presentation	74
	References	78
Chapter 4	Energy System Definition	79
4.1	Energy Demand and Supply	82
4.1.1	Basic and Derived Energy Demands	82
4.1.2	Energy Production, Conversion and End Use	90
4.2	Scenario Techniques	98
4.2.1	Why Use Scenario Techniques?	98
4.2.2	Methodology and Short History of Scenario Construction	100
4.2.3	Sociological and Geopolitical Basis for Scenarios	101
	References	104
Part II Applications		
Chapter 5	Life-Cycle Analysis of Particular Substances and Common Issues	109
5.1	LCA of Greenhouse Gases	109
5.1.1	Food Production and Silviculture	125
5.1.2	Extreme Events	127
5.1.3	Direct Health Impacts of Climate Change	136
5.1.4	Vector-borne Diseases	148
5.1.5	Ecosystem Impacts	155
5.1.6	Choice of Impact Valuation Methodology	156
5.1.7	Overall Valuation of Greenhouse Warming Impacts	159
5.2	LCA of Combustion Pollutants	165
5.3	LCA of Radioactive Substances and Accidents	173
	References	181
Chapter 6	Life-Cycle Analysis of Primary and Intermediate Energy Conversion	191
6.1	Power Production from Fossil Fuels	192

6.1.1	LCA of Coal-fired Power Stations	194
6.1.2	LCA of Power Stations Using Natural Gas or Fuel Oil	204
6.2	Power from Nuclear Schemes	206
6.3	Renewable Energy Chains	211
6.3.1	LCA of Wind Power Plants	211
6.3.2	LCA of Photovoltaic and other Solar Energy Systems	220
6.3.3	LCA of Hydropower and Geothermal Energy	227
6.3.4	LCA of Hydrogen Production and Large-scale Fuel Cell Plants	229
6.3.5	LCA of Food Provision	234
6.3.6	LCA of Gaseous and Liquid Biofuels	238
	References	247

Chapter 7 Life-Cycle Analysis of End-Use Energy Conversion 255

7.1	LCA of Road Traffic	255
7.1.1	Conventional Gasoline Otto-engine Passenger Car	255
7.1.2	Fuel Cell Passenger Car Compared with Conventional Car	259
7.1.3	Other Transport Modes	270
7.2	LCA of Buildings and Space Conditioning	272
7.2.1	Heat Transfer through the Building Shell	272
7.2.2	Building Heating and Hybrid Energy Systems	278
7.3	LCA of Home and Work Activities	284
	References	289

Chapter 8 Life-Cycle Analysis on a System-Wide Level 295

8.1	LCA in National Energy-System Planning	295
8.1.1	LCA of Selected Scenarios for Future Danish Energy Systems	296
8.2	Assessing Future Directions in a Global Context	301
8.3	Wrapping Up	309
	References	311

Glossary of Words and Concepts 313

Units and Conversion Factors 317

Subject Index 321
