Introduction	1
---------------------------	---

Chapter 1

Water quality assessment tools	3
1.1 Introduction.....	4
1.2 Water quality characterization tools.....	5
1.2.1 Liquid chromatography – organic carbon detection.....	5
1.2.2 Fluorescence excitation emission matrix.....	7
1.2.3 Enumeration, identification and diversity of marine microorganisms including bacteria and phytoplankton.....	10
1.3 Development of particulate fouling indices.....	14
1.3.1 SDI and MFI.....	14
1.3.2 Modified fouling index ultrafiltration at constant flux.....	16
1.3.3 Crossflow sampler modified fouling index ultrafiltration.....	21
1.4 Assessment of biofouling potential of salt and brackish water for RO desalination plants – BDOC/LC-OCD.....	23
1.4.1 Method.....	23
1.4.2 Sampling.....	25
1.4.3 Test procedure.....	25
1.4.4 Results.....	25
1.5 Determination of the concentrations of AOC and ATP in seawater.....	26
1.5.1 Introduction.....	26
1.5.2 Materials and methods.....	27
References.....	31

Chapter 2

Evaluation and comparison of seawater and brackish water pre-treatment	33
2.1 Removal of organic matter and microbial characterization in pretreatment MBR system for RO seawater desalination.....	34

2.1.1	Introduction	34
2.1.2	Results	35
2.2	Submerged ultrafiltration for reducing nom in SWRO desalination.....	39
2.2.1	Introduction	39
2.2.2	Experimental activity.....	39
2.2.3	Results and discussions	42
2.2.4	Conclusions	44
2.3	Comparison of granular media filtration and low-pressure membrane filtration for seawater pretreatment	44
2.3.1	Introduction	44
2.3.2	Pilot-scale experimental set up	44
2.3.3	Water quality parameters and fouling indices	46
2.3.4	Results and interpretation	46
2.3.5	Conclusions	50
2.4	Comparison of different pretreatment methods for RO desalination	51
2.4.1	Biofilter as pretreatment to membrane based desalination: evaluation in terms of fouling index	51
2.4.2	Fibre media filtration as a pretreatment for seawater.....	53
2.4.3	Submerged microfiltration coupled with physico-chemical processes as pre-treatment to sea water desalination.....	56
2.5	Submerged hollow fiber system as pre-treatment for the sea water reverse osmosis: Effect of the operation conditions and the characterizations of the permeate quality	58
2.5.1	Introduction	58
2.5.2	Method and materials	58
2.5.3	Data analysis	59
2.5.4	Results and discussions	59
2.5.5	Conclusions	63
2.6	Ultrafiltration-based hybrid processes for pre-treatment to seawater reverse osmosis desalination	63
2.6.1	Introduction.....	63
	References	69

Chapter 3

Development of tools for RO fouling characterization and understanding		71
3.1	Membrane autopsies	71
3.1.1	Introduction	71
3.1.2	Presentation of studied sites.....	72
3.1.3	Membrane sampling protocol and analytical tools	72
3.1.4	Results	73
3.2	Specific organic compounds analyses	78
3.2.1	¹³ C-NMR	78
3.2.2	Flash pyrolysis – GC/MS analysis.....	79
3.2.3	Thermochemolysis TMAH analysis: fatty acids analysis	81
3.3	Quantitative biomass parameters	82
3.4	Molecular analysis	84
3.4.1	Adaptation of molecular tools to analyze microbial community structure: homogeneity and reproducibility	84
3.4.2	Bacterial diversity at different desalination plants	85
3.4.3	Evolution of bacterial communities in SWRO membranes from one full-scale desalination plant (Site D) according to module usage time	85
3.4.4	Conclusions	86
3.5	General conclusion on autopsy tools relevancy	87
3.5.1	Tools for microscopic observation	87
3.5.2	Inorganic matter characterization.....	88
3.5.3	Organic matter characterization.....	88
3.5.4	Microbial characterization	89
	References	90

Chapter 4

Development of cleaning strategies for RO membranes	93
4.1 Cleaning of spiral-wound membranes	93
4.1.1 Introduction	93
4.1.2 Study objectives	94
4.1.3 Summary of results	94
4.1.4 General discussion	96
4.1.5 Conclusions and recommendations	97
4.2 Development of a laboratory method for testing membrane cleaning procedures	97
4.2.1 Introduction	97
4.2.2 Principle of the test	98
4.2.3 Production of biofilm samples	98
4.2.4 Biofilm samples and biomass concentrations	98
4.2.5 Cleaning test procedures	99
4.2.6 Cleaning efficiency for biofilms on polymer tubing	99
4.2.7 Validation tests	101
4.2.8 Discussion and conclusions	102
4.3 Effects of chemicals on membrane permeability and foulants in laboratory tests	102
4.3.1 Introduction	102
4.3.2 Methods and materials	103
4.3.3 Analysis of inorganic compounds	104
4.3.4 Results and discussion	106
4.3.5 Conclusions	110
4.4 Effects of cleaning on membrane performance in a pilot plant	111
4.4.1 Introduction	111
4.4.2 Pilot plant, membranes and test procedures	111
4.4.3 Results	113
4.4.4 Discussion and conclusions	115
References	115

Chapter 5

Process strategies for mitigation of impact of concentrates on the environment	117
5.1 Introduction	118
5.2 WT 5.1: Reduction of brine volume	118
5.2.1 BWRO concentrate disposal by deep well injection: design criteria for BWRO plants and field test results	118
5.2.2 Vacuum membrane distillation	124
5.3 WT 5.2: Recovery of dissolved salts as crystalline product	132
5.3.1 Membrane crystallization	133
5.3.2 Wind-Aided Intensified eVaporation	140
5.4 WT 5.3: Economic evaluation	143
5.4.1 Description and results of the economical evaluation	143
5.5 Conclusions	148
References	148

Chapter 6

Innovative technologies to reduce energy consumption in seawater desalination facilities	151
6.1 Introduction	151
6.2 Preparation and characterization of membranes	152
6.3 Membrane distillation and solar energy	156
6.3.1 Development and validation of a meteorological model	157
6.3.2 Experiments at lab-scale on configurations coupling solar collector and VMD	158
6.3.3 Design of a semi-industrial pilot plant	158
6.4 Study and development of solar systems coupled with membrane distillation	159
References	162

Chapter 7**Optimization and modelling of seawater and brackish water reverse**

osmosis desalination processes	163
7.1 Introduction	163
7.2 Optimization of NF membranes used in the pre-treatment of membrane based desalination	164
7.2.1 Membrane preparation	164
7.2.2 Membrane characterization	164
7.2.3 Development of NF membranes with low fouling properties	168
7.2.4 Conclusions and outlook	169
7.3 Use of membrane contactors for controlling the water gas composition	169
7.3.1 Introduction	169
7.3.2 Membrane characterization	170
7.3.3 Results and discussion	170
7.3.4 Conclusions and outlook	173
7.4 Comprehensive modelling of the RO desalination process and optimizing hydraulics in spiral wound elements	175
7.4.1 Introduction	175
7.4.2 Materials and methods	176
7.4.3 CFD modelling	178
7.4.4 Results and discussion	179
7.5 Summary	183
References	184

Chapter 8

Integrated system configuration	187
8.1 Introduction	187
8.2 WT 8.1: Critical state of the art of the desalination technologies	188
8.3 WT 8.2 and WT 8.3: Study and optimization of different integrated systems	189
8.3.1 Integrated membrane processes: systems' design and analysis	191
8.3.2 Integrated membrane processes: systems' modelling	194
8.4 WT 8.4: Economic evaluation of the integrated membrane systems	195
8.5 WT 8.5: Quantitative indicators	197
8.6 Conclusions	198
References	198

Chapter 9**Environmental impact assessment (EIA) and life cycle analysis (LCA) of**

membrane-based desalination plants	201
9.1 Introduction	201
9.2 Environmental impacts	202
9.2.1 Concentrate disposal	202
9.2.2 Pretreatment and cleaning chemicals	203
9.2.3 Energy use	204
9.2.4 Other environmental concerns	204
9.3 Environmental Impact Assessment (EIA)	205
9.3.1 EIA process	205
9.3.2 Environmental monitoring	206
9.4 Best Available Techniques (BAT)	207
9.5 Decision support system	208
9.5.1 Case study	208
9.6 Energy and exergy analysis of integrated membrane systems	213
9.6.1 Integrated flow-sheets	213
9.6.2 Results and discussion	213

9.7	Conclusions	215
9.8	Acknowledgements.....	216
	References	216
	Conclusion	217
	Appendix I	221
	Appendix II	225
