

# Mass Flow and Energy Efficiency of Municipal Wastewater Treatment Plants

---

Cao Ye Shi

# Contents

---

Preface .....	ix
Contributors and acknowledgements .....	xi
About the author .....	xiii
Nomenclature .....	xv
<b>Chapter 1</b>	
<b><i>Mass flow and balance of carbonaceous, nitrogenous and phosphorus matters in a large water reclamation plant in Singapore</i></b> .....	1
1.1 Introduction .....	1
1.2 Approaches and methods .....	2
1.2.1 Ulu Pandan water reclamation plant .....	2
1.2.2 Information and data collection .....	3
1.2.3 Mass balance and simplification .....	4
1.3 Results .....	4
1.3.1 Hydraulic flow and compositions .....	4
1.3.2 Carbonaceous mass flow and distribution .....	7
1.3.3 Nitrogenous mass flow and distribution .....	9
1.3.4 Phosphorus mass flow and distribution .....	11
1.3.5 Energy utilization distribution and efficiency .....	12
1.4 Discussion .....	13
1.4.1 Nitrogenous and phosphorus matters in the solid line .....	13
1.4.2 Reject stream .....	13
1.4.3 Solids mass flow and balance .....	14
1.4.4 Benchmark with Strass WWTP .....	14

vi	Mass Flow and Energy Efficiency of Wastewater Treatment Plants	
1.4.5	Improvement of the unit operation and roadmap to increase energy efficiency .....	16
1.5	Conclusions .....	17
	References .....	18

## **Chapter 2**

<b><i>COD, nitrogen conversion and mass flow in coupled UASB-Activated sludge process for municipal wastewater treatment in warm climates .....</i></b>		21
2.1	Introduction .....	21
2.2	Materials and methods .....	22
2.2.1	Feed sewage and sludge seeds .....	22
2.2.2	Laboratory-scale system .....	22
2.3	Results and discussion .....	23
2.3.1	Characterization of the influent raw sewage .....	23
2.3.2	Biological conversion and carbonaceous matter balance in the UASB reactor .....	24
2.3.3	Performance of the activated sludge process .....	32
2.3.4	Comparisons between the coupled and conventional activated sludge processes .....	37
2.4	Conclusions .....	39
	References .....	40

## **Chapter 3**

<b><i>Energy efficiency of municipal wastewater treatment plants .....</i></b>		43
3.1	Introduction .....	43
3.1.1	Energy and municipal wastewater treatment .....	43
3.1.2	Potentials of increasing energy efficiency .....	44
3.1.3	Objectives .....	44
3.1.4	Approaches .....	45
3.1.5	Contents of the report .....	45
3.2	Energy efficiency of municipal wastewater treatment plants .....	45
3.2.1	Baseline investigation .....	46
3.2.2	Benchmark of energy efficiency .....	50
3.3	Reducing electricity consumption .....	55
3.3.1	Aeration .....	55
3.3.2	General principles applicable to mechanic equipment .....	56
3.3.3	Energy audit manuals and procedures .....	56
3.3.4	Innovative Processes .....	57
3.4	Increasing electricity (energy) generation .....	61
3.4.1	Enhancing electricity generation from biogas .....	62
3.4.2	Energy generation from thermal treatment of biosolids .....	68
3.5	Management and policies .....	73

3.5.1	Management tools . . . . .	73
3.5.2	Incentive policies for energy recovery . . . . .	73
3.6	Roadmaps towards a positive energy plant . . . . .	74
3.6.1	Achieving an energy efficiency of 30% to 50% . . . . .	74
3.6.2	Achieving an energy efficiency of 80% and beyond . . . . .	75
3.7	Summary . . . . .	75
	References . . . . .	77

## Chapter 4

### ***Vision: municipal wastewater treatment plants and sanitation systems in 2030***

	<i>Vision: municipal wastewater treatment plants and sanitation systems in 2030</i> . . . . .	83
4.1	Issues of the current wastewater treatment plants . . . . .	83
4.2	New performance indicators of the near future municipal wastewater treatment plants . . . . .	84
4.2.1	Water . . . . .	84
4.2.2	Biosolids (residual) . . . . .	84
4.2.3	Air . . . . .	84
4.2.4	Energy . . . . .	85
4.2.5	Chemicals . . . . .	85
4.3	R & D Topics . . . . .	86
4.3.1	Efficient utilization of particulate carbon in wastewater . . . . .	86
4.3.2	Retaining slow growth microorganisms in reactor . . . . .	86
4.3.3	Mechanistic investigation of hybrid (dual-phase) biological process . . . . .	87
4.3.4	Pre-concentrating . . . . .	87
4.3.5	Automatic on-line control of biological reactor . . . . .	88
4.3.6	Nutrient removal and recovery . . . . .	88
4.3.7	Micro-pollutants removal . . . . .	89
4.3.8	Cost-effective disinfection . . . . .	89
4.3.9	Mitigation of greenhouse gas emission . . . . .	89
4.3.10	Membrane improvements . . . . .	90
4.3.11	High efficiency gasification and pyrolysis . . . . .	90
4.3.12	Energy recovery from heat and other sources . . . . .	90
4.3.13	Technologies to keep special notice of . . . . .	90
4.4	Novel anaerobic ammonia conversion processes beyond the current horizon . . . . .	91
4.4.1	ANaerobic AMMonium OXidation (ANAMMOX) in main stream . . . . .	91
4.4.2	Denitrification and Anaerobic Methane Oxidation (DAMO) process . . . . .	94
4.5	Hybrid systems extending to the boundary of catchment . . . . .	95
4.5.1	Problems with the current wastewater treatment plants and sanitation systems . . . . .	95
4.5.2	Black, grey water and decentralized system . . . . .	96
4.5.3	New urban sanitation system . . . . .	97
4.6	New management tools and institutions . . . . .	98
4.6.1	Energy management systems . . . . .	98

## Mass Flow and Energy Efficiency of Wastewater Treatment Plants

4.6.2	Sustainability evaluation system .....	98
4.6.3	Institutional reform .....	98
4.6.4	Public communications .....	99
4.7	Summary .....	99
	References .....	100
	<b>Index .....</b>	<b>105</b>
