# Mechatronics and Intelligent Systems for Off-road Vehicles

Springer

# Contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>Introduction</b>   | <b>1</b>  |
| 1.1      | Evolution of Off-road Vehicles Towards Automation:<br>the Advent of Field Robotics and Intelligent Vehicles | 1         |
| 1.2      | Applications and Benefits of Automated Machinery  | 6         |
| 1.3      | Automated Modes: Teleoperation, Semiautonomy,<br>and Full Autonomy  | 7         |
| 1.4      | Typology of Field Vehicles Considered for Automation  | 9         |
| 1.5      | Components and Systems in Intelligent Vehicles  | 10        |
| 1.5.1    | Overview of the Systems that Comprise<br>Automated Vehicles   | 11        |
| 1.5.2    | Flow Meters, Encoders, and Potentiometers<br>for Front Wheel Steering Position                              | 12        |
| 1.5.3    | Magnetic Pulse Counters and Radars for Theoretical<br>and Ground Speed                                      | 14        |
| 1.5.4    | Sonar and Laser (Lidar) for Obstacle Detection<br>and Navigation  | 14        |
| 1.5.5    | GNSS for Global Localization  | 15        |
| 1.5.6    | Machine Vision for Local Awareness  | 16        |
| 1.5.7    | Thermocameras and Infrared for Detecting Living Beings  | 17        |
| 1.5.8    | Inertial and Magnetic Sensors for Vehicle Dynamics:<br>Accelerometers, Gyroscopes, and Compasses            | 18        |
| 1.5.9    | Other Sensors for Monitoring Engine Functions   | 19        |
|          | References  | 19        |
| <b>2</b> | <b>Off-road Vehicle Dynamics</b>  | <b>21</b> |
| 2.1      | Off-road Vehicle Dynamics   | 21        |
| 2.2      | Basic Geometry for Ackerman Steering: the Bicycle Model   | 26        |
| 2.3      | Forces and Moments on Steering Systems  | 31        |
| 2.4      | Vehicle Tires, Traction, and Slippage   | 37        |
|          | References  | 42        |

|  |     |
|--|-----|
| <b>3 Global Navigation Systems . . . . .</b>   | 43  |
| 3.1 Introduction to Global Navigation Satellite Systems<br>(GPS, Galileo and GLONASS): the Popularization of GPS<br>for Navigation . . . . . | 43  |
| 3.2 Positioning Needs of Agricultural Autosteered Machines:<br>Differential GPS and Real-time Kinematic GPS . . . . .                        | 47  |
| 3.3 Basic Geometry of GPS Guidance: Offset and Heading . . . . .   | 50  |
| 3.4 Significant Errors in GPS Guidance: Drift, Multipath<br>and Atmospheric Errors, and Precision Estimations . . . . .                      | 51  |
| 3.5 Inertial Sensor Compensation for GPS Signal Degradation:<br>the Kalman Filter . . . . .  | 59  |
| 3.6 Evaluation of GPS-based Autoguidance: Error Definition<br>and Standards . . . . .  | 62  |
| 3.7 GPS Guidance Safety . . . . .  | 67  |
| 3.8 Systems of Coordinates for Field Applications . . . . .  | 68  |
| 3.9 GPS in Precision Agriculture Operations . . . . .  | 71  |
| References . . . . .   | 73  |
| <br>   |     |
| <b>4 Local Perception Systems . . . . .</b>  | 75  |
| 4.1 Real-time Awareness Needs for Autonomous Equipment . . . . .   | 75  |
| 4.2 Ultrasonics, Lidar, and Laser Rangefinders . . . . .   | 78  |
| 4.3 Monocular Machine Vision . . . . .   | 80  |
| 4.3.1 Calibration of Monocular Cameras . . . . .   | 80  |
| 4.3.2 Hardware and System Architecture . . . . .   | 82  |
| 4.3.3 Image Processing Algorithms . . . . .  | 87  |
| 4.3.4 Difficult Challenges for Monocular Vision . . . . .  | 100 |
| 4.4 Hyperspectral and Multispectral Vision . . . . .   | 102 |
| 4.5 <i>Case Study I:</i> Automatic Guidance of a Tractor<br>with Monocular Machine Vision . . . . .  | 103 |
| 4.6 <i>Case Study II:</i> Automatic Guidance of a Tractor<br>with Sensor Fusion of Machine Vision and GPS . . . . .                          | 106 |
| References . . . . .   | 109 |
| <br>   |     |
| <b>5 Three-dimensional Perception and Localization . . . . .</b>   | 111 |
| 5.1 Introduction to Stereoscopic Vision: Stereo Geometry . . . . .   | 111 |
| 5.2 Compact Cameras and Correlation Algorithms . . . . .   | 118 |
| 5.3 Disparity Images and Noise Reduction . . . . .   | 125 |
| 5.4 Selection of Basic Parameters for Stereo Perception:<br>Baseline and Lenses . . . . .  | 130 |
| 5.5 Point Clouds and 3D Space Analysis: 3D Density,<br>Occupancy Grids, and Density Grids . . . . .  | 135 |
| 5.6 Global 3D Mapping . . . . .  | 141 |
| 5.7 An Alternative to Stereo: Nodding Lasers for 3D Perception . . . . .   | 147 |
| 5.8 <i>Case Study I:</i> Harvester Guidance with Stereo 3D Vision . . . . .  | 149 |

|          |  |            |
|----------|--|------------|
| 5.9      | <i>Case Study II:</i> Tractor Guidance with Disparity Images . . . . .   | 155        |
| 5.10     | <i>Case Study III:</i> 3D Terrain Mapping with Aerial<br>and Ground Images . . . . .   | 162        |
| 5.11     | <i>Case Study IV:</i> Obstacle Detection and Avoidance . . . . .   | 165        |
| 5.12     | <i>Case Study V:</i> Bifocal Perception – Expanding the Scope<br>of 3D Vision . . . . .  | 168        |
| 5.13     | <i>Case Study VI:</i> Crop-tracking Harvester Guidance<br>with Stereo Vision . . . . .   | 173        |
|          | References . . . . .   | 184        |
| <b>6</b> | <b>Communication Systems for Intelligent Off-road Vehicles . . . . .</b>   | <b>187</b> |
| 6.1      | Onboard Processing Computers . . . . .   | 187        |
| 6.2      | Parallel Digital Interfaces . . . . .  | 189        |
| 6.3      | Serial Data Transmission . . . . .   | 190        |
| 6.4      | Video Streaming: Frame Grabbers, Universal Serial Bus (USB),<br>I <sup>2</sup> C Bus, and FireWire (IEEE 1394) . . . . .             | 195        |
| 6.5      | The Controller Area Network (CAN) Bus for Off-road Vehicles . . . . .  | 198        |
| 6.6      | The NMEA Code for GPS Messages . . . . .   | 204        |
| 6.7      | Wireless Sensor Networks . . . . .   | 207        |
|          | References . . . . .   | 207        |
| <b>7</b> | <b>Electrohydraulic Steering Control . . . . .</b>   | <b>209</b> |
| 7.1      | Calibration of Wheel Sensors to Measure Steering Angles . . . . .  | 209        |
| 7.2      | The Hydraulic Circuit for Power Steering . . . . .   | 213        |
| 7.3      | The Electrohydraulic (EH) Valve for Steering Automation:<br>Characteristic Curves, EH Simulators, Saturation, and Deadband . . . . . | 216        |
| 7.4      | Steering Control Loops for Intelligent Vehicles . . . . .  | 224        |
| 7.5      | Electrohydraulic Valve Behavior According to the Displacement–<br>Frequency Demands of the Steering Cylinder . . . . .               | 235        |
| 7.6      | Case Study: Fuzzy Logic Control for Autosteering . . . . .   | 240        |
| 7.6.1    | Selection of Variables: Fuzzification . . . . .  | 240        |
| 7.6.2    | Fuzzy Inference System . . . . .   | 242        |
| 7.6.3    | Output Membership Functions: Defuzzification . . . . .   | 244        |
| 7.6.4    | System Evaluation . . . . .  | 244        |
| 7.7      | Safe Design of Automatic Steering . . . . .  | 247        |
|          | References . . . . .   | 247        |
| <b>8</b> | <b>Design of Intelligent Systems . . . . .</b>   | <b>249</b> |
| 8.1      | Basic Tasks Executed by Off-road Vehicles: System Complexity<br>and Sensor Coordination . . . . .                                    | 249        |
| 8.2      | Sensor Fusion and Human-in-the-loop Approaches<br>to Complex Behavior . . . . .  | 251        |
| 8.3      | Navigation Strategies and Path-planning Algorithms . . . . .   | 259        |

|   |            |
