Contents

<i>Foreword</i>	<i>v</i>
<i>Preface</i>	<i>vii</i>
<i>Acknowledgment</i>	<i>ix</i>
<i>Prelude</i>	<i>xiii</i>
1. Nomenclature and Classification	1
A. Nomenclature	1
B. Classification	3
2. Diversity of Physical Structure	9
A. Simple Nucleic Acid Threads	10
B. Particulate Structure	11
3. Diversity in Chemical Components and Genomic Structure	25
A. Basic Components	25
B. Diversities in Quantitative Presence of Important Components	25
C. General Properties of Proteins and their Roles in Virus Structure	30
D. Diversity in Genomic Structure	31
4. Plant Virus Diagnostics	35
A. Identification and Detection	35
5. Vectors of Viruses	67
A. Vectors: Morphology and Biology	68
B. Vectors: Their Relation with Viruses	88
6. Dispersal, Movement and Migration of Vectors	147
A. Dispersal and Flight Activity	148
B. Atmospheric Transport and Migration of Vectors	161
C. Dispersal of Vectors other than Insects	168
7. Plant Virus Epidemiology and Ecology	175
A. Introduction	175
B. Nature of Viruses and Their Epidemiological Relevance	176

C. Conventional Epidemiology	177
D. Ecological Epidemiology	188
E. Molecular Ecology and Epidemiology	193
F. Evolutionary Epidemiology	196
G. Ecological Genomics and Epidemiology	201
H. Global Warming and Epidemiology	202
I. Epidemiology of Some Internationally Important Diseases	208
(a) Barley Yellow Dwarf Virus (BYDV)	208
(b) Maize Streak Virus (MSV)	213
(c) Rice Tungro Disease (RTD)	216
(d) Citrus Tristeza Virus (CTV)	220
(e) Beet Curly Top Virus (BCTV)	224
(f) Tomato Yellow Leaf Curl Virus (TYLCV)	226

8. Management: Strategies and Tactics	251
A. Integrated Pest Management (IPM)	252
B. Some Examples of Currently Operational IPM	297
C. Phytosanitation and quarantines	298

<i>Appendix I</i>	325
<i>Appendix II</i>	353
<i>Appendix III</i>	365
<i>Appendix IV-VIII</i>	469
<i>Index</i>	483
<i>Color Plate Section</i>	499
