

*"Classic! This handbook is an excellent reference for engineers
and quality professionals in any field."*

—Kevin W. Williams, Vice President - Quality, General Motors North America

TAGUCHI'S Quality Engineering HANDBOOK

Genichi Taguchi
Subir Chowdhury • Yuin Wu

Contents

Preface	xxv
Acknowledgments	xxix
About the Authors	xxxi

SECTION 1 THEORY

Part I	
Genichi Taguchi's Latest Thinking	3
1	
The Second Industrial Revolution and Information Technology	5
2	
Management for Quality Engineering	25
3	
Quality Engineering: Strategy in Research and Development	39
4	
Quality Engineering: The Taguchi Method	56
Part II	
Quality Engineering: A Historical Perspective	125
5	
Development of Quality Engineering in Japan	127

6		
History of Taguchi's Quality Engineering in the United States		153
Part III		
Quality Loss Function		169
7		
Introduction to the Quality Loss Function		171
8		
Quality Loss Function for Various Quality Characteristics		180
9		
Specification Tolerancing		192
10		
Tolerance Design		208
Part IV		
Signal-to-Noise Ratio		221
11		
Introduction to the Signal-to-Noise Ratio		223
12		
SN Ratios for Continuous Variables		239
13		
SN Ratios for Classified Attributes		290
Part V		
Robust Engineering		311
14		
System Design		313
15		
Parameter Design		318
16		
Tolerance Design		340

Contents

17		
Robust Technology Development		352
18		
Robust Engineering: A Manager's Perspective		377
19		
Implementation Strategies		389
Part VI		
Mahalanobis–Taguchi System (MTS)		395
20		
Mahalanobis–Taguchi System		397
Part VII		
Software Testing and Application		423
21		
Application of Taguchi Methods to Software System Testing		425
Part VIII		
On-Line Quality Engineering		435
22		
Tolerancing and Quality Level		437
23		
Feedback Control Based on Product Characteristics		454
24		
Feedback Control of a Process Condition		468
25		
Process Diagnosis and Adjustment		474
Part IX		
Experimental Regression		483
26		
<i>Parameter Estimation in Regression Equations</i>		485

Part X	
Design of Experiments	501
27	
Introduction to Design of Experiments	503
28	
Fundamentals of Data Analysis	506
29	
Introduction to Analysis of Variance	515
30	
One-Way Layout	523
31	
Decomposition to Components with a Unit Degree of Freedom	528
32	
Two-Way Layout	552
33	
Two-Way Layout with Decomposition	563
34	
Two-Way Layout with Repetition	573
35	
Introduction to Orthogonal Arrays	584
36	
Layout of Orthogonal Arrays Using Linear Graphs	597
37	
Incomplete Data	609
38	
Youden Squares	617

SECTION 2 APPLICATION (CASE STUDIES)

Part I	629
Robust Engineering: Chemical Applications	
<i>Biochemistry</i>	
Case 1	
Optimization of Bean Sprouting Conditions by Parameter Design	631
Case 2	
Optimization of Small Algae Production by Parameter Design	637
<i>Chemical Reaction</i>	
Case 3	
Optimization of Polymerization Reactions	643
Case 4	
Evaluation of Photographic Systems Using a Dynamic Operating Window	651
<i>Measurement</i>	
Case 5	
Application of Dynamic Optimization in Ultra Trace Analysis	659
Case 6	
Evaluation of Component Separation Using a Dynamic Operating Window	666
Case 7	
Optimization of a Measuring Method for Granule Strength	672
Case 8	
A Detection Method for Thermoresistant Bacteria	679

Pharmacology**Case 9**

Optimization of Model Ointment Prescriptions for In Vitro Percutaneous Permeation 686

Separation**Case 10**

Use of a Dynamic Operating Window for Herbal Medicine Granulation 695

Case 11

Particle-Size Adjustment in a Fine Grinding Process for a Developer 705

Part II

Robust Engineering: Electrical Applications 715

Circuits**Case 12**

Design for Amplifier Stabilization 717

Case 13

Parameter Design of Ceramic Oscillation Circuits 732

Case 14

Evaluation Method of Electric Waveforms by Momentary Values 735

Case 15

Robust Design for Frequency-Modulation Circuits 741

Electronic Devices**Case 16**

Optimization of Blow-off Charge Measurement Systems 746

Case 17

Evaluation of the Generic Function of Film Capacitors 753

Case 18 Parameter Design of Fine-Line Patterning for IC Fabrication	758
Case 19 Minimizing Variation in Pot Core Transformer Processing	764
Case 20 Optimization of the Back Contact of Power MOSFETs	771
<i>Electrophoto</i>	
Case 21 Development of High-Quality Developers for Electrophotography	780
Case 22 Functional Evaluation of an Electrophotographic Process	788
Part III Robust Engineering: Mechanical Applications	793
<i>Biomechanical</i>	
Case 23 Biomechanical Comparison of Flexor Tendon Repairs	795
<i>Machining</i>	
Case 24 Optimization of Machining Conditions by Electrical Power	806
Case 25 Development of Machining Technology for High- Performance Steel by Transformability	819
Case 26 Transformability of Plastic Injection-Molded Gear	827

Material Design**Case 27**

Optimization of a Felt-Resist Paste Formula Used in
Partial Felting 836

Case 28

Development of Friction Material for Automatic
Transmissions 841

Case 29

Parameter Design for a Foundry Process Using Green
Sand 848

Case 30

Development of Functional Material by Plasma Spraying 852

Material Strength**Case 31**

Optimization of Two-Piece Gear Brazing Conditions 858

Case 32

Optimization of Resistance Welding Conditions for
Electronic Components 863

Case 33

Tile Manufacturing Using Industrial Waste 869

Measurement**Case 34**

Development of an Electrophotographic Toner Charging
Function Measuring System 875

Case 35

Clear Vision by Robust Design 882

Processing

Case 36

Optimization of Adhesion Condition of Resin Board and Copper Plate 890

Case 37

Optimization of a Wave Soldering Process 895

Case 38

Optimization of Casting Conditions for Camshafts by Simulation 900

Case 39

Optimization of Photoresist Profile Using Simulation 904

Case 40

Optimization of a Deep-Drawing Process 911

Case 41

Robust Technology Development of an Encapsulation Process 916

Case 42

Gas-Arc Stud Weld Process Parameter Optimization Using Robust Design 926

Case 43

Optimization of Molding Conditions of Thick-Walled Products 940

Case 44

Quality Improvement of an Electrodeposited Process for Magnet Production 945

Case 45

Optimization of an Electrical Encapsulation Process through Parameter Design 950

Case 46

Development of Plastic Injection Molding Technology by Transformability 957

Product Development

Case 47 Stability Design of Shutter Mechanisms of Single-Use Cameras by Simulation	965
Case 48 Optimization of a Clutch Disk Torsional Damping System Design	973
Case 49 Direct-Injection Diesel Injector Optimization	984
Case 50 Optimization of Disk Blade Mobile Cutters	1005
Case 51 D-VHS Tape Travel Stability	1011
Case 52 Functionality Evaluation of Spindles	1018
Case 53 Improving Minivan Rear Window Latching	1025
Case 54 Linear Proportional Purge Solenoids	1032
Case 55 Optimization of a Linear Actuator Using Simulation	1050
Case 56 Functionality Evaluation of Articulated Robots	1059
Case 57 New Ultraminiature KMS Tact Switch Optimization	1069
Case 58 Optimization of an Electrical Connector Insulator Contact Housing	1084

Contents

Case 59
Airflow Noise Reduction of Intercoolers 1100

Case 60
Reduction of Boosting Force Variation of Brake Boosters 1106

Case 61
Reduction of Chattering Noise in Series 47 Feeder
Valves 1112

Case 62
Optimal Design for a Small DC Motor 1122

Case 63
Steering System On-Center Robustness 1128

Case 64
Improvement in the Taste of Omelets 1141

Case 65
Wiper System Chatter Reduction 1148

Other

Case 66
Fabrication Line Capacity Planning Using a Robust
Design Dynamic Model 1157

Part IV
Mahalanobis–Taguchi System (MTS) 1169

Human Performance

Case 67
Prediction of Programming Ability from a Questionnaire
Using the MTS 1171

Case 68
Technique for the Evaluation of Programming Ability
Based on the MTS 1178

Inspection**Case 69**

Application of Mahalanobis Distance for the Automatic Inspection of Solder Joints 1189

Case 70

Application of the MTS to Thermal Ink Jet Image Quality Inspection 1196

Case 71

Detector Switch Characterization Using the MTS 1208

Case 72

Exhaust Sensor Output Characterization Using the MTS 1220

Case 73

Defect Detection Using the MTS 1233

Medical Diagnosis**Case 74**

Application of Mahalanobis Distance to the Measurement of Drug Efficacy 1238

Case 75

Use of Mahalanobis Distance in Medical Diagnosis 1244

Case 76

Prediction of Urinary Continence Recovery among Patients with Brain Disease Using the Mahalanobis Distance 1258

Case 77

Mahalanobis Distance Application for Health Examination and Treatment of Missing Data 1267

Case 78 Forecasting Future Health from Existing Medical Examination Results Using the MTS	1277
<i>Product</i>	
Case 79 Character Recognition Using the Mahalanobis Distance	1288
Case 80 Printed Letter Inspection Technique Using the MTS	1293
Part V Software Testing and Application	1299
<i>Algorithms</i>	
Case 81 Optimization of a Diesel Engine Software Control Strategy	1301
Case 82 Optimizing Video Compression	1310
<i>Computer Systems</i>	
Case 83 Robust Optimization of a Real-Time Operating System Using Parameter Design	1324
<i>Software</i>	
Case 84 Evaluation of Capability and Error in Programming	1335
Case 85 Evaluation of Programmer Ability in Software Production	1343
Case 86 Robust Testing of Electronic Warfare Systems	1351

Case 87 Streamlining of Debugging Software Using an Orthogonal Array	1360
Part VI On-Line Quality Engineering	1365
<i>On-Line</i>	
Case 88 Application of On-Line Quality Engineering to the Automobile Manufacturing Process	1367
Case 89 Design of Preventive Maintenance of a Bucket Elevator through Simultaneous Use of Periodic Maintenance and Checkup	1376
Case 90 Feedback Control by Quality Characteristics	1383
Case 91 Control of Mechanical Component Parts in a Manufacturing Process	1389
Case 92 Semiconductor Rectifier Manufacturing by On-Line Quality Engineering	1395
Part VII Miscellaneous	1399
<i>Miscellaneous</i>	
Case 93 Estimation of Working Hours in Software Development	1401
Case 94 Applications of Linear and Nonlinear Regression Equations for Engineering	1406

SECTION 3 TAGUCHI'S METHODS VERSUS OTHER QUALITY PHILOSOPHIES

39		
Quality Management in Japan		1423
40		
Deming and Taguchi's Quality Engineering		1442
41		
Enhancing Robust Design with the Aid of TRIZ and Axiomatic Design		1449
42		
Testing and Quality Engineering		1470
43		
Total Product Development and Taguchi's Quality Engineering		1478
44		
Role of Taguchi Methods in Design for Six Sigma		1492

APPENDIXES

A		
Orthogonal Arrays and Linear Graphs: Tools for Quality Engineering		1525
B		
Equations for On-Line Process Control		1598
C		
Orthogonal Arrays and Linear Graphs for Chapter 38		1602
Glossary		1618
Bibliography		1625
Index		1629
