

# Contents

*Preface, ix*

*Contributors, xiii*

- 1. Introduction to Innovative Food Processing Technologies: Background, Advantages, Issues, and Need for Multiphysics Modeling, 3**  
Gustavo V. Barbosa-Cánovas, Abdul Ghani Albaali, Pablo Juliano, and Kai Knoerzer
- 2. The Need for Thermophysical Properties in Simulating Emerging Food Processing Technologies, 23**  
Pablo Juliano, Francisco Javier Trujillo, Gustavo V. Barbosa-Cánovas, and Kai Knoerzer
- 3. Neural Networks: Their Role in High-Pressure Processing, 39**  
José S. Torrecilla and Pedro D. Sanz
- 4. Computational Fluid Dynamics Applied in High-Pressure Processing Scale-Up, 57**  
Cornelia Rauh and Antonio Delgado
- 5. Computational Fluid Dynamics Applied in High-Pressure High-Temperature Processes: Spore Inactivation Distribution and Process Optimization, 75**  
Pablo Juliano, Kai Knoerzer, and Cornelis Versteeg
- 6. Computer Simulation for Microwave Heating, 101**  
Hao Chen and Juming Tang
- 7. Simulating and Measuring Transient Three-Dimensional Temperature Distributions in Microwave Processing, 131**  
Kai Knoerzer, Marc Regier, and Helmar Schubert
- 8. Multiphysics Modeling of Ohmic Heating, 155**  
Peter J. Fryer, Georgina Porras-Parral, and Serafim Bakalis
- 9. Basics for Modeling of Pulsed Electric Field Processing of Foods, 171**  
Nicolás Meneses, Henry Jaeger, and Dietrich Knorr
- 10. Computational Fluid Dynamics Applied in Pulsed Electric Field Preservation of Liquid Foods, 193**  
Nicolás Meneses, Henry Jaeger, and Dietrich Knorr

- 11. Novel, Multi-Objective Optimization of Pulsed Electric Field Processing for Liquid Food Treatment, 209**  
Jens Krauss, Özgür Ertunç, Cornelia Rauh, and Antonio Delgado
- 12. Modeling the Acoustic Field and Streaming Induced by an Ultrasonic Horn Reactor, 233**  
Francisco Javier Trujillo and Kai Knoerzer
- 13. Computational Study of Ultrasound-Assisted Drying of Food Materials, 265**  
Enrique Riera, José Vicente García-Pérez, Juan Andrés Cárcel, Victor M. Acosta, and Juan A. Gallego-Juárez
- 14. Characterization and Simulation of Ultraviolet Processing of Liquid Foods Using Computational Fluid Dynamics, 303**  
Larry Forney, Tatiana Koutchma, and Zhengcai Ye
- 15. Multiphysics Modeling of Ultraviolet Disinfection of Liquid Food—Performance Evaluation Using a Concept of Disinfection Efficiency, 325**  
Huachen Pan
- 16. Continuous Chromatographic Separation Technology—Modeling and Simulation, 335**  
Filip Janakievski
- 17. The Future of Multiphysics Modeling of Innovative Food Processing Technologies, 353**  
Peter J. Fryer, Kai Knoerzer, and Pablo Juliano

*Index, 365*

*Color plate section appears between pages 208 and 209.*
