

Table of Contents

Abstract	6
Introduction	7
Objectives	11
Materials and Methods	12
1 Study area	12
2 Preparation of biophysical factors	14
3 Downscaling global climate data to local conditions	15
4 Species distribution modeling	17
5 Assessment of possible impacts of global climate change	20
6 Adaptive management of protected area network	23
Results	27
1 Species occurrence points and model performance	27
2 Calibrated bioclimatic variables	29
3 Contributing factors for species modeling	32
4 Spatial pattern distribution and change	38
5 Roles of protected areas	47
6 Species risk assessment	49
7 Adaptive management of protected areas	51
Discussion	56
1 Downscaling climate data	56
2 Species distribution model	56
3 Sensitivity	57
4 Species loss and conservation planning	58
Conclusion	59
Acknowledgements	60
References	60
Annex	68
