Chapter 1 Introduction and Problem Statement 1

1.1 Greenhouse-Crop Cultivation—Benefits and Challenges 1
1.2 Automatic Control 2
1.3 Elementary Description of the Greenhouse-Crop System 2
1.4 Measurements and Instrumentation 6
1.5 Decomposition, Fluxes, and Information Flows 7
1.6 General State–Space Representation 10
1.7 Hierarchical Computerized Control 11
1.8 Current Status of Computerized Control 13
1.9 How Is This Book Organized? 14
Reference 14

Chapter 2 Introduction to Optimal Control of Greenhouse Climate 15

2.1 Introduction and Motivation 15
2.2 A Simple Illustrative Example 16
2.3 General Formulation of Optimal Control Problems 17
2.4 Benefits and Difficulties Associated with Optimal Control 21

Chapter 3 Open-Loop Optimal Control 25

3.1 Introduction 25
3.2 Optimal Control Theory 25
3.3 Optimal Control Algorithms 30
3.3.1 Indirect Methods 31
3.3.2 Direct Methods and Control Parameterization 33
References 38

Chapter 4 Closed-Loop Optimal Control 39

4.1 Introduction 39
4.2 State Estimation 40
4.3 Linear Quadratic Feedback 41
4.3.1 Feedback by Receding Horizon Control 42
4.3.1.1 The Problem of Widely Different Time Scales 42
4.3.1.2 Feedback Design for Optimal Greenhouse Climate Control 44
4.3.2 Conclusions 47
References 48

Chapter 5 Greenhouse Cultivation Control Paradigms 49

5.1 Introduction 49
5.2 Optimal Control Revisited 49
5.2.1 Generic Problem Statement 49
5.2.2 Open-Loop Solution of the Whole Problem 50
5.2.3 The Choice of the Weather 51
5.2.4 Closed-Loop Solution of the Whole Problem 52
5.2.4.1 Online Solution by Repeated Optimization 52
5.2.4.2 Online Solution by Using Stationarity of the Hamiltonian 54
5.2.5 Time-Scale Decomposition 54
5.2.5.1 Offline Solution of the Slow Subproblem 55
5.2.5.2 Online Implementation 55
5.2.5.3 Hierarchical Control, Setpoint Tracking 56
5.2.5.4 Receding Horizon Optimal Control with Slow Costates as Inputs 57
5.2.5.5 Explaining the Difference: The Sailing Analogy 58
5.3 Earlier Surveys of Greenhouse Climate Control Solutions 60
5.4 Classification of Proposed Greenhouse Climate Control Solutions 61
5.4.1 Focus on Feedback Control of Fast Greenhouse and Fast Crop Subsystems 63
5.4.1.1 General Overview 63
5.4.1.2 Realizing a Given Greenhouse Climate 64
5.4.1.3 Control of Greenhouse Climate within Operational Bounds 67
5.4.1.4 Greenhouse Climate Control with Cost Minimization 68
5.4.1.5 Controlling Fast Crop Processes: The "Speaking Plant" 71
5.4.2 Focus on Strategies Driven by Slow Crop Processes 72
5.4.2.1 Assessing Economics by Simulation or Local Optimization 73
5.4.2.2 Optimal Strategies Using Dynamic Optimization 74
5.4.3 Integration, Application, and Implementation 78
5.4.3.1 Expert Systems 79
5.4.3.2 Implementation of Optimal Control—Overview 79
5.4.3.3 Direct Application of Computed Controls 79
5.4.3.4 Hierarchical Control with Settings 80
5.4.3.5 Implementations of Optimal Control Using Meta-Information 80
5.4.3.6 Tracking the Slow Variables—Crop Development 81
5.4.3.7 Integrated Optimal Control 81
5.5 Discussion and Conclusion 81
References 82

Chapter 6 A Seminal Case: Lettuce 89

6.1 Introduction 89
6.2 Models 90
6.3 The Optimal Control Problem 94
6.4 Optimal Control Case Studies 97

6.4.1 Analysis of the Optimal Control Problem 97
6.4.2 Comparison of Optimal Control with Climate Control Supervised by a Grower 102
6.4.2.1 Materials and Methods 102
6.4.2.2 Results 103
6.4.2.3 Discussion 107
6.4.2.4 Concluding Remarks 108
6.4.3 Sensitivity Analysis of the Optimal Control Problem 109
6.4.3.1 Materials and Methods 109
6.4.3.2 Results and Discussion 110
6.4.3.3 Concluding Remarks 113
6.4.4 Time-Scale Decomposition 114
6.4.4.1 Materials and Methods 114
6.4.4.2 Results 115
6.4.4.3 Concluding Remarks 120
6.5 Concluding Remarks 120
References 121

Chapter 7 An Experimental Application: Tomato 123

7.1 Introduction 123
7.2 Tomato Model 124
7.2.1 Working with Leaves Instead of Generative Parts 126
7.2.2 Assimilate Pool 126
7.2.3 Leaf and Fruit Biomass 129
7.2.4 Losses 129
7.2.5 Constitutive Relations 130
7.2.5.1 Photosynthesis 130
7.2.5.2 Growth Demand 130
7.2.5.3 Maintenance Respiration 131
7.2.5.4 Development State 131
7.2.5.5 Harvest Rate 132
7.3 Greenhouse Climate Model 133
7.3.1 Heat Balances 135
7.3.1.1 Soil 138
7.3.1.2 Heating Pipe System 138
7.3.2 Mass Balances 140
7.3.2.1 Water Vapor in the Greenhouse Air 140
7.3.2.2 Carbon Dioxide in the Greenhouse Air 142
7.3.3 Comparison of Lumped Model with Control Input by Actuators or by Fluxes 142
7.4 State–Space Form of the Complete Greenhouse-Crop Model 143
7.5 Calibration and Model Results 145
7.5.1 Calibration of the Big Leaf–Big Fruit Model 145
7.5.2 Calibration of the Heating Pipe and Greenhouse Climate Model 148
7.5.3 Conclusions about the Models 150
7.6 Open-Loop Optimization 151
7.6.1 Problem to Be Solved 151
7.6.2 Method 152
7.6.3 Results 153
7.6.4 Recapitulation of the Open-Loop Step 161

7.7 Two-Time-Scale Receding Horizon Optimal Controller (RHOC) 163
7.7.1 Problem to Be Solved 164
7.7.2 Method 165
7.7.3 Results 165
7.8 Evaluation of Optimal Control 167
7.8.1 Sensitivity of RHOC to Modeling Errors 167
7.8.2 Sensitivity of Slow Costates to the Nominal Weather 169
7.8.3 Sensitivity of RHOC to Slow Costates 169
7.8.4 Sensitivity of RHOC to Weather Forecast and Prediction Horizon 169
7.9 Assessment of Economic Result as Compared with Conventional Control 172
7.9.1 Simulated Comparison 173
7.9.1.1 Initial Conditions 173
7.9.1.2 Matching the Humidity Constraint Violation 173
7.9.1.3 Humidity Penalty and Heat Input 174
7.9.1.4 Results 174
7.10 Discussion and Conclusions 176
References 177

Chapter 8 An Advanced Application: The Solar Greenhouse 179

8.1 Introduction 179
8.2 Description of the Solar Greenhouse Concept 180
8.3 System Description 181
8.3.1 Greenhouse Configuration 181
8.3.2 Assumptions 182
8.4 The Solar Greenhouse Model 183
8.4.1 Carbon Dioxide Model 189
8.4.1.1 Carbon Dioxide Supply 191
8.4.1.2 Photosynthesis and Respiration 191
8.4.1.3 Carbon Dioxide Transport due to Ventilation 192
8.4.1.4 Carbon Dioxide Transport past the Screen 192
8.4.2 Water Vapor Model 192
8.4.2.1 Canopy Transpiration 193
8.4.2.2 Condensation of Water 193
8.4.2.3 Water Vapor Transport due to Ventilation 194
8.4.2.4 Water Vapor Transport past the Screen 194
8.4.3 Thermal Model 194
8.4.3.1 Convection 195
8.4.3.2 Longwave Radiation Absorption 197
8.4.3.3 Shortwave Radiation Absorption 197
8.4.3.4 Conduction 200
8.4.3.5 Latent Heat Exchange 201
8.4.4 Modeling the Screen 201
8.4.4.1 Screen Closure 202
8.4.4.2 Volume Flow Air past the Screen 203
8.4.4.3 Temperatures and Concentrations of CO_2 and H_2O When the Screen Is Open 203
8.4.5 Modeling Ventilation 204
8.4.5.1 Volume Flow of Air through Windows and Leakage 204

8.4.6 Modeling the Heating and the Cooling System 206
8.4.6.1 Heating System Boiler and Condenser 206
8.4.6.2 The Aquifer 209
8.4.6.3 Heating System Heat Pump 209
8.4.6.4 Cooling System Heat Exchanger 212
8.5 Model of Crop Biophysics 214
8.5.1 Evapotranspiration 215
8.5.2 Crop Photosynthesis and Respiration 218
8.5.2.1 Photosynthesis Model 218
8.5.3 Temperature Integration 225
8.6 Sensitivity Analysis, Calibration, and Validation 228
8.6.1 Conventional versus Solar Greenhouse Model 228
8.6.1.1 Control Inputs 228
8.6.1.2 External Inputs 228
8.6.1.3 States 229
8.6.2 Sensitivity Analysis 229
8.6.3 Parameter Estimation 230
8.7 Optimal Control 232
8.7.1 Cost Function 232
8.7.1.1 Derivation Bounds for Aquifer Energy Content 235
8.7.2 Receding Horizon Optimal Control 239
8.7.3 Control Inputs 240
8.7.3.1 Initial Guess Control Inputs 242
8.7.3.2 State-Dependent Control Input Bounds 243
8.7.3.3 Example Grid Search 244
8.7.4 External Inputs: The Weather Predictions 245
8.7.5 Initial Values States 246
8.7.6 Optimization Method: Gradient Search 246
8.7.7 Results RHOC with Gradient Search 248
8.7.7.1 A Priori versus A Posteriori Results 249
8.7.7.2 Influence of the Separate Solar Greenhouse Elements 257
8.7.8 Conclusions and Discussion 258
References 259
Appendices 261
A. Solar Radiation Parameters 261
A.1 Solar Parameters 261
A.2 Radiation Parameters 262
B. Humidity Parameters 264
B.1 Saturation Pressure and Concentration 264
B.2 Relative Humidity 265
B.3 Dewpoint Temperature 266

Chapter 9 Developments, Open Issues, and Perspectives 267

9.1 Introduction 267
9.2 Developments in the Greenhouse Industry and Consequences for Control 267
9.2.1 Recent Advances in the Greenhouse Industry 267
9.2.2 Future Developments in the Greenhouse Industry 268
9.2.2.1 Innovations Motivated by Sustainability: Energy and CO_2 269

9.2.2.2 Innovations Motivated by Sustainability: Water 270
9.2.2.3 Innovations Motivated Mainly by Consumer Demands ... 272
9.3 Prerequisites for Future Control Systems 273
9.3.1 Demands of the Future 273
9.3.2 How Does Optimal Control Fit In? 274
9.4 Challenges for Science and Technology 275
9.4.1 Sensors and Monitoring 275
9.4.1.1 External Input Information 275
9.4.1.2 Feedback from the Crop 276
9.4.1.3 Sensor Fusion; Soft Sensors 276
9.4.2 Physical Modeling 276
9.4.2.1 Lumped Physical Models 276
9.4.2.2 Moisture and Condensation Prediction 277
9.4.2.3 Spatial Distribution 277
9.4.3 Crop Models 277
9.4.3.1 State–Space Form, Hybrid Models, and Time–Variable Structure 277
9.4.3.2 Crop Model Process Details 277
9.4.3.3 Crop Development 279
9.4.3.4 Expansion of the Operational Range 280
9.4.3.5 Stress and Vulnerability Models 280
9.4.3.6 Crop Quality 280
9.4.4 Modeling Methodology 280
9.4.4.1 Model Identification, Calibration, and Sensitivity 280
9.4.4.2 Model Reduction 281
9.4.4.3 Parameter Variability and Adaptation 282
9.4.5 Goal Function 282
9.4.5.1 Formulation of Goal Function 282
9.4.5.2 Constraints and Penalties 282
9.4.5.3 Risk 283
9.4.5.4 Stochastic Variability 283
9.4.6 Offline: Dynamic Optimization Methods 283
9.4.7 Online Control 284
9.4.7.1 Receding Horizon Optimal Control 284
9.4.7.2 Adaptive Receding Horizon Optimal Control 285
9.4.7.3 Tracking Necessary Conditions for Optimality 286
9.4.7.4 Self-Optimizing Control 288
9.4.8 User Interaction 288
9.4.9 Information and Communication Technology 289
9.5 Showstoppers for Optimal Control 289
9.5.1 Limitations in State of the Art 289
9.5.2 The Human Factor: The Grower 290
9.5.3 Human Factor: The Control Engineer 290
9.5.4 Leveling the Barriers 292
9.6 Conclusions and Perspectives 292
References 293
