

GREEN CHEMISTRY AND ENGINEERING

A Practical Design Approach

CONCEPCIÓN JIMÉNEZ-GONZÁLEZ *and* DAVID J.C. CONSTABLE

CONTENTS

PREFACE	xi
PART I GREEN CHEMISTRY AND GREEN ENGINEERING IN THE MOVEMENT TOWARD SUSTAINABILITY	1
1 Green Chemistry and Engineering in the Context of Sustainability	3
1.1 Why Green Chemistry?	3
1.2 Green Chemistry, Green Engineering, and Sustainability	6
1.3 Until Death Do Us Part: A Marriage of Disciplines	13
Problems	15
References	15
2 Green Chemistry and Green Engineering Principles	17
2.1 Green Chemistry Principles	17
2.2 Twelve More Green Chemistry Principles	26
2.3 Twelve Principles of Green Engineering	28
2.4 The San Destin Declaration: Principles of Green Engineering	31
2.5 Simplifying the Principles	34
Problems	38
References	39
3 Starting with the Basics: Integrating Environment, Health, and Safety	41
3.1 Environmental Issues of Importance	42
3.2 Health Issues of Importance	54

3.3	Safety Issues of Importance	62
3.4	Hazard and Risk	68
3.5	Integrated Perspective on Environment, Health, and Safety	70
	Problems	70
	References	73
4	How Do We Know It's Green? A Metrics Primer	77
4.1	General Considerations About Green Chemistry and Engineering Metrics	77
4.2	Chemistry Metrics	79
4.3	Process Metrics	89
4.4	Cost Implications and Green Chemistry Metrics	101
4.5	A Final Word on Green Metrics	101
	Problems	102
	References	103
PART II	THE BEGINNING: DESIGNING GREENER, SAFER CHEMICAL SYNTHESSES	107
5	Route and Chemistry Selection	109
5.1	The Challenge of Synthetic Chemistry	109
5.2	Making Molecules	110
5.3	Using Different Chemistries	119
5.4	Route Strategy	122
5.5	Protection–Deprotection	124
5.6	Going from a Route to a Process	126
	Problems	127
	References	130
6	Material Selection: Solvents, Catalysts, and Reagents	133
6.1	Solvents and Solvent Selection Strategies	133
6.2	Catalysts and Catalyst Selection Strategies	154
6.3	Other Reagents	168
	Problems	168
	References	173
7	Reaction Conditions and Green Chemistry	175
7.1	Stoichiometry	176
7.2	Design of Experiments	178
7.3	Temperature	180
7.4	Solvent Use	182
7.5	Solvents and Energy Use	184
7.6	Reaction and Processing Time	187
7.7	Order and Rate of Reagent Addition	188
7.8	Mixing	189

Appendix 7.1: Common Practices in Batch Chemical Processing and Their Green Chemistry Impacts	191
Problems	196
References	200

8 Bioprocesses 203

8.1 How Biotechnology Has Been Used	203
8.2 Are Bioprocesses Green?	204
8.3 What Is Involved in Bioprocessing	205
8.4 Examples of Products Obtained from Bioprocessing	216
Problems	226
References	232

PART III FROM THE FLASK TO THE PLANT: DESIGNING GREENER, SAFER, MORE SUSTAINABLE MANUFACTURING PROCESSES 233

9 Mass and Energy Balances 235

9.1 Why We Need Mass Balances, Energy Balances, and Process Flow Diagrams	236
9.2 Types of Processes	237
9.3 Process Flow Diagrams	238
9.4 Mass Balances	241
9.5 Energy Balances	250
9.6 Measuring Greenness of a Process Through Energy and Mass Balances	261
Problems	265
References	272

10 The Scale-up Effect 273

10.1 The Scale-up Problem	273
10.2 Factors Affecting Scale-up	276
10.3 Scale-up Tools	283
10.4 Numbering-up vs. Scaling-up	289
Problems	290
References	293

11 Reactors and Separations 295

11.1 Reactors and Separations in Green Engineering	296
11.2 Reactors	296
11.3 Separations and Other Unit Operations	307
11.4 Batch vs. Continuous Processes	321
11.5 Does Size Matter?	323
Problems	323
References	327

12	Process Synthesis	331
12.1	Process Synthesis Background	331
12.2	Process Synthesis Approaches and Green Engineering	333
12.3	Evolutionary Techniques	334
12.4	Heuristics Methods	343
12.5	Hierarchical Decomposition	346
12.6	Superstructure and Multiobjective Optimization	349
12.7	Synthesis of Subsystems	354
	Problems	355
	References	359
13	Mass and Energy Integration	363
13.1	Process Integration: Synthesis, Analysis, and Optimization	363
13.2	Energy Integration	365
13.3	Mass Integration	373
	Problems	381
	References	388
14	Inherent Safety	391
14.1	Inherent Safety vs. Traditional Process Safety	391
14.2	Inherent Safety and Inherently Safer Design	394
14.3	Inherent Safety in Route Strategy and Process Design	398
14.4	Conclusions on Inherent Safety	406
	Problems	406
	References	411
15	Process Intensification	413
15.1	Process Intensification Background	413
15.2	Process Intensification Technologies	416
15.3	Process Intensification Techniques	435
15.4	Perspectives on Process Intensification	437
	Problems	437
	References	442
PART IV	EXPANDING THE BOUNDARIES	447
16	Life Cycle Inventory and Assessment Concepts	449
16.1	Life Cycle Inventory and Assessment Background	450
16.2	LCI/A Methodology	452
16.3	Interpretation: Making Decisions with LCI/A	473
16.4	Streamlined Life Cycle Assessment	481
	Problems	484
	References	488

17	Impacts of Materials and Procurement	493
17.1	Life Cycle Management	493
17.2	Where Chemical Trees and Supply Chains Come From	495
17.3	Green (Sustainable) Procurement	500
17.4	Transportation Impacts	511
	Problems	515
	References	517
18	Impacts of Energy Requirements	519
18.1	Where Energy Comes From	519
18.2	Environmental Life Cycle Emissions and Impacts of Energy Generation	525
18.3	From Emissions to Impacts	537
18.4	Energy Requirements for Waste Treatment	540
	Problems	540
	References	542
19	Impacts of Waste and Waste Treatment	545
19.1	Environmental Fate and Effects Data	546
19.2	Environmental Fate Information: Physical Properties	550
19.3	Environmental Fate Information: Transformation and Depletion Mechanisms	557
19.4	Environmental Effects Information	559
19.5	Environmental Risk Assessment	562
19.6	Environmental Life Cycle Impacts of Waste Treatment	565
	Problems	574
	References	576
20	Total Cost Assessment	579
20.1	Total Cost Assessment Background	579
20.2	Importance of Total Cost Assessment	580
20.3	Relationship Between Life Cycle Inventory/Assessment and Total Cost Assessment	582
20.4	Timing of a Total Cost Assessment	583
20.5	Total Cost Assessment Methodology	583
20.6	Total Cost Assessment in a Green Chemistry Context	589
	Problems	594
	References	597
PART V	WHAT LIES AHEAD	599
21	Emerging Materials	601
21.1	Emerging Materials Development	601
21.2	Nanomaterials	602

21.3	Bioplastics and Biopolymers	605
21.4	About New Green Materials	609
	Problems	609
	References	611
22	Renewable Resources	613
22.1	Why We Need Renewable Resources	613
22.2	Renewable Materials	616
22.3	The Biorefinery	621
22.4	Renewable Energy	625
	Problems	630
	References	632
23	Evaluating Technologies	635
23.1	Why We Need to Evaluate Technologies and Processes Comprehensively	635
23.2	Comparing Technologies and Processes	636
23.3	One Way to Compare Technologies	637
23.4	Trade-Offs	644
23.5	Advantages and Limitations of Comparing Technologies	645
	Problems	646
	References	649
24	Industrial Ecology	651
24.1	Industrial Ecology Background	652
24.2	Principles and Concepts of Industrial Ecology and Design	655
24.3	Industrial Ecology and Design	657
24.4	Industrial Ecology in Practice	663
	Problems	665
	References	666
25	Tying It All Together: Is Sustainability Possible?	669
25.1	Can Green Chemistry and Green Engineering Enable Sustainability?	670
25.2	Sustainability: Culture and Policy	671
25.3	Influencing Sustainability	672
25.4	Moving to Action	674
	Problems	674
	References	675
	INDEX	677
