Acknowledgments	xiii
Preface	xv
Who Should Read This Book	xvi
What's in This Book	xvi
Arduino Uno and the Arduino Platform	xviii
Code Examples and Conventions	xviii
Online Resources	xix
The Parts You Need	xxi
Starter Packs	xxi
Complete Parts List	xxii
I Getting Started with Arduino	1
1 Welcome to the Arduino	3
1.1 What You Need	4
1.2 What Exactly Is an Arduino?	4
1.3 Exploring the Arduino Board	5
1.4 Installing the Arduino IDE	11
1.5 Meeting the Arduino IDE	13
1.6 Compiling and Uploading Programs	18
1.7 Working with LEDs	21
1.8 What If It Doesn't Work?	23
1.9 Exercises	24
2 Inside the Arduino	27
2.1 What You Need	27
2.2 Managing Projects and Sketches	28
2.3 Changing Preferences	29
2.4 Using Serial Ports	30
2.5 What If It Doesn't Work?	41
2.6 Exercises	42

II	Eight Arduino Projects	43
3	Building Binary Dice	45
3.1	What You Need	45
3.2	Working with Breadboards	46
3.3	Using an LED on a Breadboard	48
3.4	First Version of a Binary Die	51
3.5	Working with Buttons	56
3.6	Adding Our Own Button	61
3.7	Building a Dice Game	62
3.8	What If It Doesn't Work?	68
3.9	Exercises	69
4	Building a Morse Code Generator Library	71
4.1	What You Need	71
4.2	Learning the Basics of Morse Code	71
4.3	Building a Morse Code Generator	72
4.4	Fleshing Out the Generator's Interface	74
4.5	Outputting Morse Code Symbols	75
4.6	Installing and Using the Telegraph Class	77
4.7	Final Touches	80
4.8	What If It Doesn't Work?	82
4.9	Exercises	83
5	Sensing the World Around Us	85
5.1	What You Need	86
5.2	Measuring Distances with an Ultrasonic Sensor	87
5.3	Increasing Precision Using Floating-Point Numbers	93
5.4	Increasing Precision Using a Temperature Sensor	96
5.5	Transferring Data Back to Your Computer Using Processing	102
5.6	Representing Sensor Data	106
5.7	Building the Application's Foundation	108
5.8	Implementing Serial Communication in Processing	109
5.9	Visualizing Sensor Data	112
5.10	What If It Doesn't Work?	114
5.11	Exercises	114

6	Building a Motion-Sensing Game Controller	115
6.1	What You Need	116
6.2	Wiring Up the Accelerometer	117
6.3	Bringing Your Accelerometer to Life	118
6.4	Finding and Polishing Edge Values	120
6.5	Building Your Own Game Controller	123
6.6	Writing Your Own Game	127
6.7	More Projects	135
6.8	What If It Doesn't Work?	136
6.9	Exercises	136
7	Tinkering with the Wii Nunchuk	137
7.1	What You Need	137
7.2	Wiring a Wii Nunchuk	138
7.3	Talking to a Nunchuk	139
7.4	Building a Nunchuk Class	142
7.5	Using Our Nunchuk Class	145
7.6	Rotating a Colorful Cube	146
7.7	What If It Doesn't Work?	152
7.8	Exercises	152
8	Networking with Arduino	153
8.1	What You Need	154
8.2	Using Your PC to Transfer Sensor Data to the Inter- net	155
8.3	Registering an Application with Twitter	157
8.4	Tweeting Messages with Processing	158
8.5	Networking Using an Ethernet Shield	162
8.6	Emailing from the Command Line	169
8.7	Emailing Directly from an Arduino	171
8.8	Detecting Motion Using a Passive Infrared Sensor	175
8.9	Bringing It All Together	179
8.10	What If It Doesn't Work?	182
8.11	Exercises	184
9	Creating Your Own Universal Remote Control	185
9.1	What You Need	186
9.2	Understanding Infrared Remote Controls	187
9.3	Grabbing Remote Control Codes	188
9.4	Building Your Own Apple Remote	192
9.5	Controlling Devices Remotely with Your Browser	195

9.6	Building an Infrared Proxy	197
9.7	What If It Doesn't Work?	204
9.8	Exercises	205
10	Controlling Motors with Arduino	207
10.1	What You Need	207
10.2	Introducing Motors	208
10.3	First Steps with a Servo Motor	209
10.4	Building a Blaminatr	212
10.5	What If It Doesn't Work?	217
10.6	Exercises	218
III	Appendixes	221
A	Basics of Electronics	223
A.1	Current, Voltage, and Resistance	223
A.2	Learning How to Solder	227
B	Advanced Arduino Programming	233
B.1	The Arduino Programming Language	233
B.2	Bit Operations	235
C	Advanced Serial Programming	237
C.1	Learning More About Serial Communication	237
C.2	Serial Communication Using Various Programming Languages	239
D	Bibliography	253
	Index	255
