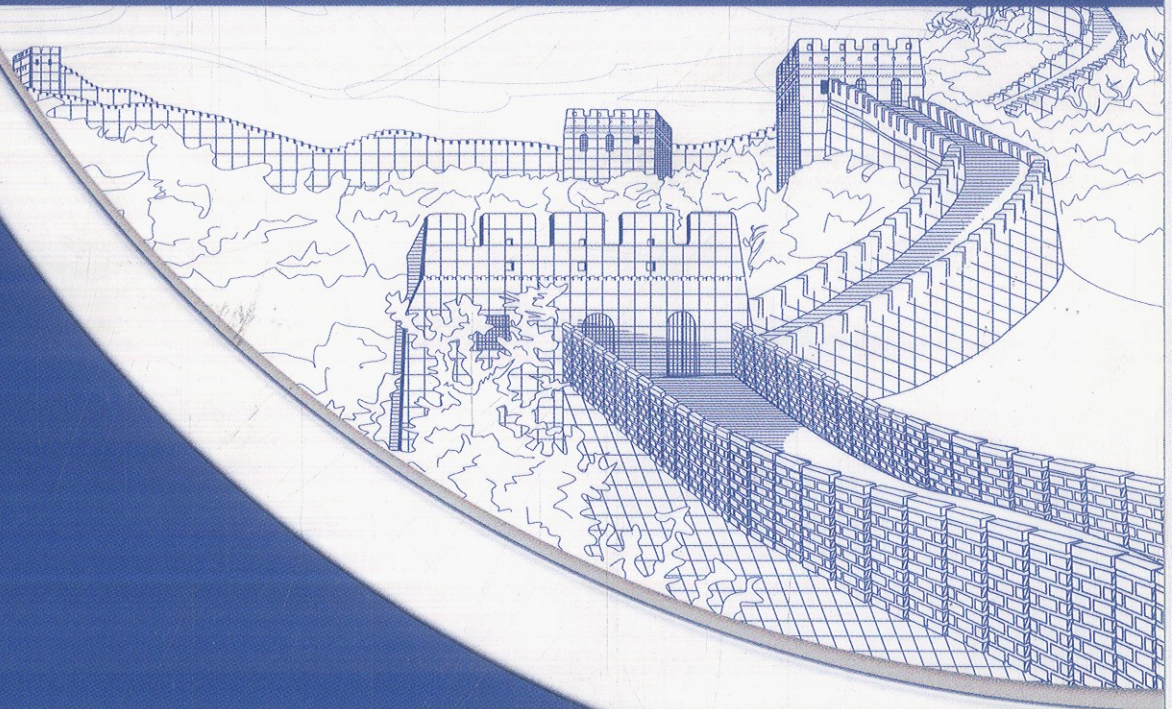
Android™ Development with Flash®



Take advantage of sample code on the companion Web site

Your visual blueprint™ for developing mobile apps

TABLE OF CONTENTS

HOW TO USE THIS VISUAL BLUEPRINT BOOK V

1 GETTING STARTED WITH ANDROID DEVELOPMENT 2

Introducing Android Devices 2
Introducing the Development Tools 4
Introducing the Available APIs 6
Check What APIs Are Not Available 8
Become an Android Developer 10
Get the Android SDK 12
Get the Android Eclipse Plug-in 14
Enable USB Debugging 16
Create an Android Virtual Device 18
Start the Emulator 20

2 GETTING STARTED WITH FLASH CS5 22

Using the Actions Panel 22
Create a Skeleton Custom Class 24
Set the Source Path 26
Create MovieClips 28
Create Buttons 30
Edit Properties in Flash 32
Add Objects to the Stage with Code 34
Remove Objects from the Stage with Code 36
Work with Events 38
Using the Drawing API 40
Using Flash CS5 Help 42

3 DEVELOPING YOUR FIRST APPLICATION 44

Create a New Project 44
Configure Publish Settings 46
Set Your Application Output 48
Create a P12 Certificate 50
Compile from Flash Professional CS5 52
Compile from the Command Line 54
Install Your Application on Your Device 56
Update Your Version Number 58
Set Application Permissions 60
Set a Custom Application URI 62

4 DESIGNING YOUR APPLICATION 64

Mobile User Interface Guidelines 64
Understanding Screen Resolutions 66
Create Full-Screen Applications 68
Understanding Screen Orientation 70
Create Usable Hit States 72
Understanding Layout 74

5 HANDLING INTERACTION 76

Create Button States 76
Respond to Touch Events 78
Track Multiple Touches 80
Respond to Zoom Events 82
Respond to Rotate Events 84
Respond to Pan Events 86
Respond to Swipe Events 88
Listen for Accelerometer Events 90
Determine If the Accelerometer Is Available 92
Determine Device Orientation 94
Detect Which Way Is Up 96
Filter Accelerometer Data 98

6 WORKING WITH IMAGES 100

Prepare Your Images 100
Import Images 102
Display Images 104
Bundle Images with Your Application 106
Load Images at Runtime 108
Create Images Dynamically 110
Save Images to the Camera Roll 112
Select Images from the Camera Roll 114
Display the Camera 116

7 WORKING WITH SOUND 118

Import Audio into Your Project 118
Choose an Audio Codec 120
Bundle Sounds with Your Application 122
Load Sounds at Runtime 124
Play Sounds 126
Stop Sounds 128
Set the Volume of a Sound 130
Visualize the Sound Spectrum 132
Access the Microphone 134

8 WORKING WITH VIDEO 136

Explore Available Video Formats and Encode a Video File 136
Convert Videos 138
Embed a Video 140
Bundle a Video with Your Application 142
Load a Video 144
Buffer a Video 146
Control a Video 148
Set the Volume of a Video 150

9 WORKING WITH TEXT 152

Embed Fonts in Your Application 152
Create an Input TextField 154
Create a Password TextField 156
Using TLF TextFields 158
Create a Scrollable TextField 160

10 SAVING STATE 162

Create a Local SharedObject 162
Write to a SharedObject 164
Load Data from a SharedObject 166
Connect to a SQLite Database 168
Create a SQLite Table 170
Insert Data into a SQLite Table 172
Select Data from a SQLite Table 174
Update Data in a SQLite Table 176
Delete Data from a SQLite Table 178
Handle Application Exits 180
Save Application States 182
Handle Back and Menu Button Presses 184
Handle Application Deactivation 186

11 WORKING WITH FILES 188

Reference Files and Directories 188
Write Files 190
Read Files 192
Update Files 194
Append Files 196
Handle Files Synchronously 198
Copy Files 200
Load SWF files 202

12 USING THE LOCATION AND WIFI FEATURES . . . 204

Retrieve Your Current Location 204
Map Your Location with Yahoo! 206
Map Your Location with Google 210
Determine Your Speed 214
Check for an Internet Connection 216
Set the System Idle Mode 218
Display Web Pages 220

13 USING SPECIAL URL PROTOCOLS 222

Make Phone Calls 222
Open the Mail Application 224
Open the Maps Application 226
Open the Messaging Application 228
Play a YouTube Video 230

14 INTEGRATING WITH THIRD-PARTY SERVICES . . . 232

Submit Updates to Twitter 232
Display Ads with Smaato 234
Track with Google Analytics 236
Display Ads with AdMob 238

15 OPTIMIZING PERFORMANCE 240

Optimize Your Display List 240
Manage Mouse Events 242
Understanding cacheAsBitmap 244
Understanding cacheAsBitmapMatrix 246

6 DEBUGGING YOUR APPLICATION 248

Show Your Trace Statements 248
Create Breakpoints 250
Using the Flash CS5 Debugger 252
Understanding the Debug Console 254
Understanding the Variables Panel 256
Debug with the Android Eclipse Plug-in 258

17 DEPLOYING YOUR APPLICATION 260

Take Screenshots of Your Application on Your Device 260
Create an Application Icon 262
Publish Your Application for the Android Market 264
Upload Your Application to the Android Market 266

APPENDIX A ACTIONSCRIPT CLASS REFERENCE . . . 270

INDEX 332
