Programming Google App Engine

Mark C. Chu-Carroll

Edited by Colleen Toporek

Contents

I	Getting Started with Google App Engine	1
1	Introduction	3
1.1	What's Cloud Computing?	3
1.2	Cloud Computing Programming Systems	9
1.3	Acknowledgments	12
2	Getting Started	13
2.1	Setting Up a Google App Engine Account	13
2.2	Setting Up Your Development Environment	15
2.3	Starting to Program in Python with App Engine	18
2.4	Monitoring Your Application	25
II	Programming Google App Engine with Python	29
3	A First Real Cloud Application	31
3.1	The Basic Chat Application	31
3.2	The Basics of HTTP	35
3.3	Mapping Chat into HTTP	39
4	Managing Data in the Cloud	47
4.1	Why Didn't Chat Work?	47
4.2	Making Chat Persistent	50
5	Google App Engine Services for Login Authentication	59
5.1	Introducing the Users Service	59
5.2	The Users Service	60
5.3	Integrating the Users Service into Chat	61
6	Organizing Code: Separating UI and Logic	65
6.1	Getting Started with Templates	65
6.2	Building Related Views with Templates	70
6.3	Multiple Chat Rooms	76

7	Making the UI Pretty: Templates and CSS	83
7.1	Introducing CSS	84
7.2	Styling Text Using CSS	85
7.3	Page Layouts Using CSS	90
7.4	Building Our Interface Using Flowed Layout	98
7.5	Including CSS Files in App Engine Applications	101
8	Getting Interactive	103
8.1	Interactive Web Services: The Basics	103
8.2	The Model-View-Controller Design Pattern	106
8.3	Talking to the Server without Disruption	109
8.4	References and Resources	117
III	Programming Google App Engine with Java	119
9	Google App Engine and Java	121
9.1	Introducing GWT	123
9.2	Getting Started with Java and GWT	125
9.3	RPC in GWT	133
9.4	Testing and Deploying with GWT	138
10	Managing Server-Side Data	139
10.1	Data Persistence in Java	139
10.2	Storing Persistent Objects in GWT	143
10.3	Retrieving Persistent Objects in GWT	147
10.4	Gluing the Client and the Server Together	149
10.5	References and Resources	151
11	Building User Interfaces in Java	153
11.1	Why Use GWT?	153
11.2	Building GWT UIs with Widgets	154
11.3	Making the UI Active: Handling Events	161
11.4	Making the UI Active: Updating the Display	166
11.5	Wrapping Up with GWT	168
11.6	References and Resources	169
12	Building the Server Side of a Java Application	171
12.1	Filling in Gaps: Supporting Chat Rooms	171
12.2	Proper Interactive Design: Being Incremental	176
12.3	Updating the Client	184
12.4	Chat Administration	185

12.5	Running and Deploying the Chat Application	187
12.6	Wrapping Up the Server Side	189
IV	Advanced Google App Engine	191
13	Advanced Datastore: Property Types	193
13.1	Building a Filesystem Service	193
13.2	Modeling the Filesystem: A First Cut	197
13.3	Property Types Reference	214
13.4	Wrapping Up Property Types	217
14	Advanced Datastore: Queries and Indices	219
14.1	Indices and Queries in Datastore	220
14.2	More Flexible Models	226
14.3	Transactions, Keys, and Entity Groups	227
14.4	Policy and Consistency Models	229
14.5	Incremental Retrieval	233
15	Google App Engine Services	235
15.1	The Memcache Service	236
15.2	Accessing Other Stuff: The URL Fetch Service . . .	241
15.3	Communicating with People: Mail and Chat Services	242
15.4	Sending and Receiving Email	246
15.5	Wrapping Up Services	249
16	Server Computing in the Cloud	251
16.1	Scheduling Jobs with App Engine Cron	252
16.2	Running Jobs Dynamically Using the Task Queue .	256
16.3	Wrapping Up Server Computing	262
17	Security in App Engine Services	263
17.1	What Is Security?	263
17.2	Basic Security	264
17.3	Advanced Security	272
18	Administering Your App Engine Deployment	281
18.1	Monitoring	281
18.2	Peeking at the Datastore	285
18.3	Logs and Debugging	286
18.4	Managing Your Application	288
18.5	Paying for What You Use	289

19	Wrapping Up	291
19.1	Cloud Concepts	291
19.2	Google App Engine Concepts	292
19.3	Where to Go from Here	294
19.4	References and Resources	296
	Index	297
