

GEOGRAPHIC INFORMATION ANALYSIS

second edition

DAVID O'SULLIVAN
DAVID J. UNWIN

Contents

Preface to the Second Edition	xi
Acknowledgments	xv
Preface to the First Edition	xvii
1 Geographic Information Analysis and Spatial Data	1
Chapter Objectives	1
1.1 Introduction	2
1.2 Spatial Data Types	5
1.3 Some Complications	10
1.4 Scales for Attribute Description	18
1.5 GIS and Spatial Data Manipulation	24
1.6 The Road Ahead	28
Chapter Review	29
References	29
2 The Pitfalls and Potential of Spatial Data	33
Chapter Objectives	33
2.1 Introduction	33
2.2 The Bad News: The Pitfalls of Spatial Data	34
2.3 The Good News: The Potential of Spatial Data	41
Chapter Review	52
References	53
3 Fundamentals—Mapping It Out	55
Chapter Objectives	55
3.1 Introduction: The Cartographic Tradition	56
3.2 Geovisualization and Analysis	58
3.3 The Graphic Variables of Jacques Bertin	60
3.4 New Graphic Variables	63
3.5 Issues in Geovisualization	65
3.6 Mapping and Exploring Points	66
3.7 Mapping and Exploring Areas	72
3.8 Mapping and Exploring Fields	80

3.9	The Spatialization of Nonspatial Data	84
3.10	Conclusion	86
	Chapter Review	87
	References	87
4	Fundamentals—Maps as Outcomes of Processes	93
	Chapter Objectives	93
4.1	Introduction: Maps and Processes	94
4.2	Processes and the Patterns They Make	95
4.3	Predicting the Pattern Generated by a Process	100
4.4	More Definitions	106
4.5	Stochastic Processes in Lines, Areas, and Fields	108
4.6	Conclusions	116
	Chapter Review	117
	References	118
5	Point Pattern Analysis	121
	Chapter Objectives	121
5.1	Introduction	121
5.2	Describing a Point Pattern	123
5.3	Assessing Point Patterns Statistically	139
5.4	Monte Carlo Testing	148
5.5	Conclusions	152
	Chapter Review	154
	References	154
6	Practical Point Pattern Analysis	157
	Chapter Objectives	157
6.1	Introduction: Problems of Spatial Statistical Analysis	158
6.2	Alternatives to Classical Statistical Inference	161
6.3	Alternatives to IRP/CSR	162
6.4	Point Pattern Analysis in the Real World	166
6.5	Dealing with Inhomogeneity	168
6.6	Focused Approaches	172
6.7	Cluster Detection: Scan Statistics	173
6.8	Using Density and Distance: Proximity Polygons	177
6.9	A Note on Distance Matrices and Point Pattern Analysis	180
	Chapter Review	182
	References	183
7	Area Objects and Spatial Autocorrelation	187
	Chapter Objectives	187
7.1	Introduction: Area Objects Revisited	188
7.2	Types of Area Objects	188

7.3	Geometric Properties of Areas	191
7.4	Measuring Spatial Autocorrelation	199
7.5	An Example: Tuberculosis in Auckland, 2001–2006	206
7.6	Other Approaches	210
	Chapter Review	212
	References	213
8	Local Statistics	215
	Chapter Objectives	215
8.1	Introduction: Think Geographically, Measure Locally	216
8.2	Defining the Local: Spatial Structure (Again)	218
8.3	An Example: The Getis-Ord G_i and G_i^* Statistics	219
8.4	Inference with Local Statistics	223
8.5	Other Local Statistics	226
8.6	Conclusions: Seeing the World Locally	234
	Chapter Review	235
	References	236
9	Describing and Analyzing Fields	239
	Chapter Objectives	239
9.1	Introduction: Scalar and Vector Fields Revisited	240
9.2	Modeling and Storing Field Data	243
9.3	Spatial Interpolation	250
9.4	Derived Measures on Surfaces	263
9.5	Map Algebra	270
9.6	Conclusions	273
	Chapter Review	274
	References	275
10	Knowing the Unknowable: The Statistics of Fields	277
	Chapter Objectives	277
10.1	Introduction	278
10.2	Regression on Spatial Coordinates: Trend Surface Analysis	279
10.3	The Square Root Differences Cloud and the (Semi-) Variogram	287
10.4	A Statistical Approach to Interpolation: Kriging	293
10.5	Conclusions	311
	Chapter Review	312
	References	313
11	Putting Maps Together—Map Overlay	315
	Chapter Objectives	315
11.1	Introduction	316

11.2	Boolean Map Overlay and Sieve Mapping	319
11.3	A General Model for Alternatives to Boolean Overlay	326
11.4	Indexed Overlay and Weighted Linear Combination	328
11.5	Weights of Evidence	331
11.6	Model-Driven Overlay Using Regression	334
11.7	Conclusions	336
	Chapter Review	337
	References	337
12	New Approaches to Spatial Analysis	341
	Chapter Objectives	341
12.1	The Changing Technological Environment	342
12.2	The Changing Scientific Environment	345
12.3	Geocomputation	346
12.4	Spatial Models	355
12.5	The Grid and the Cloud: Supercomputing for Dummies	363
12.6	Conclusions: Neogeographic Information Analysis?	365
	Chapter Review	367
	References	368
Appendix A:	Notation, Matrices, and Matrix Mathematics	373
A.1	Introduction	373
A.2	Some Preliminary Notes on Notation	373
A.3	Matrix Basics and Notation	376
A.4	Simple Matrix Mathematics	379
A.5	Solving Simultaneous Equations Using Matrices	384
A.6	Matrices, Vectors, and Geometry	389
A.7	Eigenvectors and Eigenvalues	391
	Reference	393
Index		395
