

DB2 pureXML Cookbook

Master the Power of the
IBM Hybrid Data Server

Matthias Nicola
Pav Kumar-Chatterjee

Contents

Chapter 1	Introduction	1
1.1	Anatomy of an XML Document	2
1.2	Differences Between XML and Relational Data	4
1.3	Overview of DB2 pureXML	7
1.4	Benefits of DB2 pureXML over Alternative Storage Options for XML Data	10
1.5	XML Solutions to Relational Data Model Problems	11
1.5.1	When the Schema Is Volatile	12
1.5.2	When Data Is Inherently Hierarchical in Nature	12
1.5.3	When Data Represents Business Objects	12
1.5.4	When Objects Have Sparse Attributes	13
1.5.5	When Data Needs to be Exchanged	13
1.6	Summary	13
Chapter 2	Designing XML Data and Applications	15
2.1	Choosing Between XML Elements and XML Attributes	15
2.2	XML Tags versus Values	19
2.3	Choosing the Right Document Granularity	22
2.4	Using a Hybrid XML/Relational Approach	24
2.5	Summary	25
Chapter 3	Designing and Managing XML Storage Objects	27
3.1	Understanding XML Document Trees	28
3.2	Understanding pureXML Storage	30
3.3	XML Storage in DB2 for Linux, UNIX, and Windows	33
3.3.1	Storage Objects for XML Data	33
3.3.2	Defining Columns, Tables, and Table Spaces for XML Data	36
3.3.3	Dropping XML Columns	40
3.3.4	Improved XML Storage Format in DB2 9.7	40
3.4	Using XML Base Table Row Storage (Inlining)	41
3.4.1	Monitoring and Configuring XML Inlining	43
3.4.2	Potential Benefits and Drawbacks of XML Inlining	47
3.5	Compressing XML Data	48
3.6	Examining XML Storage Space Consumption	51
3.7	Reorganizing XML Data and Indexes	53
3.8	Understanding XML Space Management: A Comprehensive Example	54
3.9	XML in Range Partitioned Tables and MDC Tables	57
3.9.1	XML and Range Partitioning	57
3.9.2	XML and Multidimensional Clustering	58
3.10	XML in a Partitioned Database (DPF)	59
3.11	XML Storage in DB2 for z/OS	60

3.11.1	Storage Objects for XML Data	61
3.11.2	Characteristics of XML Table Spaces	63
3.11.3	Tables with Multiple XML Columns	64
3.11.4	Naming and Storage Conventions	64
3.12	Utilities for XML Objects in DB2 for z/OS	65
3.12.1	REPORT TABLESPACESET for XML	67
3.12.2	Reorganizing XML Data in DB2 for z/OS	68
3.12.3	CHECK DATA for XML	69
3.13	XML Parsing and Memory Consumption in DB2 for z/OS	71
3.13.1	Controlling the Memory Consumption of XML Operations	71
3.13.2	Redirecting XML Parsing to zIIP and zAAP	72
3.14	Summary	73
Chapter 4	Inserting and Retrieving XML Data	75
4.1	Inserting XML Documents	76
4.1.1	Simple Insert Statements	76
4.1.2	Reading XML Documents from Files or URLs	79
4.2	Deleting XML Documents	82
4.3	Retrieving XML Documents	83
4.4	Handling Documents with XML Declarations	85
4.5	Copying Full XML Documents	86
4.6	Dealing with XML Special Characters	87
4.7	Understanding XML Whitespace and Document Storage	89
4.7.1	Preserving XML Whitespace	91
4.7.2	Changing the Whitespace Default from “Strip” to “Preserve”	93
4.7.3	Storing XML Documents for Compliance	94
4.8	Summary	95
Chapter 5	Moving XML Data	97
5.1	Exporting XML Data in DB2 for Linux, UNIX, and Windows	98
5.1.1	Exporting XML Documents to a Single File	98
5.1.2	Exporting XML Documents as Individual Files	100
5.1.3	Exporting XML Documents as Individual Files with Non-Default Names	102
5.1.4	Exporting XML Documents to One or Multiple Dedicated Directories	102
5.1.5	Exporting Fragments of XML Documents	104
5.1.6	Exporting XML Data with XML Schema Information	105
5.2	Importing XML Data in DB2 for Linux, UNIX, and Windows	106
5.2.1	IMPORT Command and Input Files	107
5.2.2	Import/Insert Performance Tips	108
5.3	Loading XML Data in DB2 for Linux, UNIX, and Windows	109
5.4	Unloading XML Data in DB2 for z/OS	111
5.5	Loading XML Data in DB2 for z/OS	114
5.6	Validating XML Documents during Load and Insert Operations	116
5.7	Splitting Large XML Documents into Smaller Documents	116
5.8	Replicating and Publishing XML Data	118

5.9 Federating XML Data	120
5.10 Managing XML Data with HADR	121
5.11 Handling XML Data in db2look and db2move	122
5.12 Summary	123
Chapter 6 Querying XML Data: Introduction and XPath	125
6.1 An Overview of Querying XML Data	126
6.2 <i>Understanding the XQuery and XPath Data Model</i>	128
6.2.1 Sequences	128
6.2.2 Sequence in, Sequence out	130
6.3 Sample Data for XPath, SQL/XML, and XQuery	131
6.4 Introduction to XPath	132
6.4.1 Analogy Between XPath and Navigating a File System	133
6.4.2 Simple XPath Queries	133
6.5 How to Execute XPath in DB2	137
6.6 Wildcards and Double Slashes	140
6.7 XPath Predicates	142
6.8 Existential Semantics	147
6.9 Logical Expressions with and, or, not()	148
6.10 The Current Context and the Parent Step	151
6.11 Positional Predicates	153
6.12 Union and Construction of Sequences	154
6.13 XPath Functions	155
6.14 General and Value Comparisons	156
6.15 XPath Axes and Unabbreviated Syntax	157
6.16 Summary	157
Chapter 7 Querying XML Data with SQL/XML	159
7.1 Overview of SQL/XML	160
7.2 Retrieving XML Documents or Document Fragments with XMLQUERY	161
7.2.1 Referencing XML Columns in SQL/XML Functions	162
7.2.2 Retrieving Element Values Without XML Tags	163
7.2.3 Retrieving Repeating Elements with XMLQUERY	164
7.3 Retrieving XML Values in Relational Format with XMLTABLE	165
7.3.1 Generating Rows and Columns from XML Data	165
7.3.2 Dealing with Missing Elements	167
7.3.3 Avoiding Type Errors	168
7.3.4 Retrieving Repeating Elements with XMLTABLE	169
7.3.5 Numbering XMLTABLE Rows Based on Repeating Elements	173
7.3.6 Retrieving Multiple Repeating Elements at Different Levels	174
7.4 Using XPath Predicates in SQL/XML with XMLEXISTS	177
7.5 Common Mistakes with SQL/XML Predicates	181
7.6 Using Parameter Markers or Host Variables	183
7.7 XML Queries with Dynamically Computed XPath Expressions	185

7.8	Ordering a Query Result Set Based on XML Values	186
7.9	Converting XML Values to Binary SQL Types	187
7.10	Summary	188
Chapter 8	Querying XML Data with XQuery	189
8.1	XQuery Overview	190
8.2	Processing XML Data with FLWOR Expressions	191
8.2.1	Anatomy of a FLWOR Expression	191
8.2.2	Understanding the for and let Clauses	193
8.2.3	Understanding the where and order by Clauses	194
8.2.4	FLWOR Expressions with Multiple for and let Clauses	195
8.3	Comparing FLWOR Expressions, XPath Expressions, and SQL/XML	197
8.3.1	Traversing XML Documents	197
8.3.2	Using XML Predicates	198
8.3.3	Result Set Cardinalities in XQuery and SQL/XML	200
8.3.4	Using FLWOR Expressions in SQL/XML	201
8.4	Constructing XML Data	202
8.4.1	Constructing Elements with Computed Values	202
8.4.2	Constructing XML Data with Predicates and Conditions	204
8.4.3	Constructing Documents with Multiple Levels of Nesting	206
8.4.4	Constructing Documents with XML Aggregation in SQL/XML Queries	207
8.5	Data Types, Cast Expressions, and Type Errors	208
8.6	Arithmetic Expressions	212
8.7	XQuery Functions	214
8.7.1	String Functions	215
8.7.2	Number and Aggregation Functions	218
8.7.3	Sequence Functions	220
8.7.4	Namespace and Node Functions	222
8.7.5	Date and Time Functions	224
8.7.6	Boolean Functions	226
8.8	Embedding SQL in XQuery	227
8.9	Using SQL Functions and User-Defined Functions in XQuery	229
8.10	Summary	230
Chapter 9	Querying XML Data: Advanced Queries & Troubleshooting	233
9.1	Aggregation and Grouping of XML Data	233
9.1.1	Aggregation and Grouping Queries with XMLTABLE	234
9.1.2	Aggregation of Values within and across XML Documents	236
9.1.3	Grouping Queries in SQL/XML versus XQuery	237
9.2	Join Queries with XML Data	239
9.2.1	XQuery Joins between XML Columns	240
9.2.2	SQL/XML Joins between XML Columns	242
9.2.3	Joins between XML and Relational Columns	248
9.2.4	Outer Joins between XML Columns	250

9.3 Case-Insensitive XML Queries	252
9.4 How to Avoid “Bad” Queries	253
9.4.1 Construction of Excessively Large Documents	253
9.4.2 “Between” Predicates on XML Data	254
9.4.3 Large Global Sequences	256
9.4.4 Multilevel Nesting SQL and XQuery	257
9.5 Common Errors and How to Avoid Them	258
9.5.1 SQLI6001N	259
9.5.2 SQLI6002N	259
9.5.3 SQLI6003N	260
9.5.4 SQLI6005N	261
9.5.5 SQLI6015N	262
9.5.6 SQLI6011N	263
9.5.7 SQLI6061N	263
9.5.8 SQLI6075N	264
9.6 Summary	264
Chapter 10 Producing XML from Relational Data	267
10.1 SQL/XML Publishing Functions	268
10.1.1 Constructing XML Elements from Relational Data	269
10.1.2 NULL Values, Missing Elements, and Empty Elements	274
10.1.3 Constructing XML Attributes from Relational Data	275
10.1.4 Constructing XML Documents from Multiple Relational Rows	277
10.1.5 Constructing XML Documents from Multiple Relational Tables	281
10.1.6 Comparing XMLAGG, XMLCONCAT, and XMLFOREST	284
10.1.7 Conditional Element Construction	284
10.1.8 Leading Zeros in Constructed Elements and Attributes	285
10.1.9 Default Tagging of Relational Data with XMLROW and XMLGROUP	286
10.1.10 GUI-Based Definition of SQL/XML Publishing Queries	289
10.1.11 Constructing Comments, Processing Instructions, and Text Nodes	290
10.1.12 Legacy Functions	290
10.2 Using XQuery Constructors with Relational Input	290
10.3 XML Declarations for Constructed XML Data	292
10.4 Inserting Constructed XML Data into XML Columns	294
10.5 Summary	295
Chapter 11 Converting XML to Relational Data	297
11.1 Advantages and Disadvantages of Shredding	297
11.2 Shredding with the XMLTABLE Function	301
11.2.1 Hybrid XML Storage	303
11.2.2 Relational Views over XML Data	305
11.3 Shredding with Annotated XML Schemas	306
11.3.1 Annotating an XML Schema	306
11.3.2 Defining Schema Annotations Visually in IBM Data Studio	311

11.3.3	Registering an Annotated Schema	311
11.3.4	Decomposing One XML Document at a Time	312
11.3.5	Decomposing XML Documents in Bulk	315
11.4	Summary	318
Chapter 12	Updating and Transforming XML Documents	321
12.1	Replacing a Full XML Document	322
12.2	Modifying Documents with XQuery Updates	324
12.3	Updating the Value of an XML Node in a Document	326
12.3.1	Replacing an Element Value	326
12.3.2	Replacing an Attribute Value	327
12.3.3	Replacing a Value Using a Parameter Marker	328
12.3.4	Replacing Multiple Values in a Document	328
12.3.5	Replacing an Existing Value with a Computed Value	329
12.4	Replacing XML Nodes in a Document	331
12.5	Deleting XML Nodes from a Document	333
12.6	Renaming Elements or Attributes in a Document	334
12.7	Inserting XML Nodes into a Document	335
12.7.1	Defining the Position of Inserted Elements	335
12.7.2	Defining the Position of Inserted Attributes	336
12.7.3	Insert Examples	337
12.8	Handling Repeating and Missing Nodes	340
12.9	Modifying Multiple XML Nodes in the Same Document	343
12.9.1	Snapshot Semantics and Conflict Situations	343
12.9.2	Converting Elements to Attributes and Vice Versa	345
12.10	Modifying XML Documents in Queries	346
12.11	Modifying XML Documents in Insert Operations	349
12.12	Modifying XML Documents in Update Cursors	350
12.13	XML Updates in DB2 for z/OS	351
12.14	Transforming XML Documents with XSLT	352
12.14.1	The XSLTRANSFORM Function	353
12.14.2	XML to HTML Transformation	356
12.15	Summary	358
Chapter 13	Defining and Using XML Indexes	361
13.1	Defining XML Indexes	362
13.1.1	Unique XML Indexes	364
13.1.2	Lean XML Indexes	365
13.1.3	Using the DB2 Control Center to Create XML Indexes	366
13.2	XML Index Data Types	367
13.2.1	VARCHAR(n)	367
13.2.2	VARCHAR HASHED	368
13.2.3	DOUBLE and DECFLOAT	369
13.2.4	DATE and TIMESTAMP	369

13.2.5	Choosing a Suitable Index Data Type	369
13.2.6	Rejecting Invalid Values	371
13.3	Using XML Indexes to Evaluate Query Predicates	373
13.3.1	Understanding Index Eligibility	373
13.3.2	Data Types in XML Indexes and Query Predicates	374
13.3.3	Text Nodes in XML Indexes and Query Predicates	375
13.3.4	Wildcards in XML Indexes and Query Predicates	376
13.3.5	Using Indexes for Structural Predicates	377
13.4	XML Indexes and Join Predicates	379
13.5	XML Indexes on Non-Leaf Elements	383
13.6	Special Cases Where XML Indexes Cannot be Used	385
13.6.1	Special Cases with XMLQUERY	385
13.6.2	Parent Steps	385
13.6.3	The let and return Clauses	386
13.7	XML Index Internals	387
13.7.1	XML Index Keys	387
13.7.2	Logical and Physical XML Indexes	389
13.8	XML Index Statistics	390
13.9	Summary	393
Chapter 14	XML Performance and Monitoring	395
14.1	Explaining XML Queries in DB2 for Linux, UNIX, and Windows	396
14.1.1	The Explain Tables in DB2 for Linux, UNIX, and Windows	396
14.1.2	Using db2exfmt to Obtain Access Plans	397
14.1.3	Using Visual Explain to Display Access Plans	400
14.1.4	Access Plan Operators	401
14.1.5	Understanding and Analyzing XML Query Execution Plans	403
14.2	Explaining XML Queries in DB2 for z/OS	409
14.2.1	The Explain Tables in DB2 for z/OS	409
14.2.2	Obtaining Access Plan Information in SPUFI	410
14.2.3	Using Visual Explain to Display Access Plans	411
14.2.4	Access Plan Operators	413
14.2.5	Understanding and Analyzing XML Query Execution Plans	414
14.3	Statistics Collection for XML Data	417
14.3.1	Statistics Collection for XML Data in DB2 for z/OS	417
14.3.2	Statistics Collection for XML Data in DB2 for Linux, UNIX, and Windows	418
14.3.3	Examining XML Statistics with db2cat	419
14.4	Monitoring XML Activity	424
14.4.1	Using the Snapshot Monitor in DB2 for Linux, UNIX, and Windows	424
14.4.2	Monitoring Database Utilities	427
14.5	Best Practices for XML Performance	428
14.5.1	XML Document Design	428
14.5.2	XML Storage	429

14.5.3 XML Queries	430
14.5.4 XML Indexes	432
14.5.5 XML Updates	433
14.5.6 XML Schemas	434
14.5.7 XML Applications	434
14.6 Summary	435
Chapter 15 Managing XML Data with Namespaces	437
15.1 Introduction to XML Namespaces	437
15.1.1 Namespace Declarations in XML Documents	439
15.1.2 Default Namespaces	442
15.2 Exploring Namespaces in XML Documents	444
15.3 Querying XML Data with Namespaces	447
15.3.1 Declaring Namespaces in XML Queries	448
15.3.2 Using Namespace Declarations in SQL/XML Queries	451
15.3.3 Using Namespaces in the XMLTABLE Function	452
15.3.4 Dealing with Multiple Namespaces per Document	454
15.4 Creating Indexes for XML Data with Namespaces	456
15.5 Constructing XML Data with Namespaces	460
15.5.1 SQL/XML Publishing Functions and Namespaces	460
15.5.2 XQuery Constructors and Namespaces	462
15.6 Updating XML Data with Namespaces	463
15.6.1 Updating Values in Documents with Namespaces	464
15.6.2 Renaming Nodes in Documents with Namespace Prefixes	465
15.6.3 Renaming Nodes in Documents with Default Namespaces	467
15.6.4 Inserting and Replacing Nodes in Documents with Namespaces	468
15.7 Summary	469
Chapter 16 Managing XML Schemas	471
16.1 Introduction to XML Schemas and Their Usage	472
16.1.1 Valid Versus Well-Formed XML Documents	473
16.1.2 To Validate or Not to Validate, That Is the Question!	474
16.1.3 Custom Versus Industry Standard XML Schemas	474
16.2 Anatomy of an XML Schema	476
16.3 An XML Schema with Include and Import	479
16.4 Registering XML Schemas	483
16.4.1 Registering XML Schemas in the DB2 Command Line Processor	484
16.4.2 Registering XML Schemas from Applications via Stored Procedures	486
16.4.3 Registering XML Schemas from Java Applications via JDBC	488
16.4.4 Two XML Schemas Sharing a Common Schema Document	489
16.4.5 Error Situations and How to Resolve Them	490
16.5 Removing XML Schemas from the Schema Repository	492

16.6 XML Schema Evolution	493
16.6.1 Schema Evolution Without Document Validation	494
16.6.2 Generic Schema Evolution with Document Validation	494
16.6.3 Compatible Schema Evolution with the UPDATE XMLSCHEMA Command	495
16.7 Granting and Revoking XML Schema Usage Privileges	499
16.8 Document Type Definitions (DTDs) and External Entities	501
16.9 Browsing the XML Schema Repository (XSR)	502
16.9.1 Tables and Views of the XML Schema Repository	503
16.9.2 Queries against the XML Schema Repository	508
16.10 XML Schema Considerations in DB2 for z/OS	510
16.11 Summary	512
Chapter 17 Validating XML Documents against XML Schemas	513
17.1 Document Validation Upon Insert	514
17.2 Document Validation Upon Update	518
17.3 Validation without Rejecting Invalid Documents	519
17.4 Enforcing Validation with Check Constraints	520
17.5 Automatic Validation with Triggers	523
17.6 Diagnosing Validation and Parsing Errors	525
17.7 Validation during Load and Import Operations	530
17.7.1 Validation against a Single XML Schema	530
17.7.2 Validation against Multiple XML Schemas	531
17.7.3 Using a Default XML Schema	532
17.7.4 Overriding XML Schema References	532
17.7.5 Validation Based on schemaLocation Attributes	534
17.8 Checking Whether an Existing Document Has Been Validated	534
17.9 Validating Existing Documents in a Table	535
17.10 Finding the XML Schema for a Validated Document	538
17.11 How to Undo Document Validation	540
17.12 Considerations for Validation in DB2 for z/OS	540
17.12.1 Document Validation Upon Insert	541
17.12.2 Document Validation Upon Update	542
17.12.3 Validating Existing Documents in a Table	543
17.12.4 Summary of Platform Similarities and Differences	543
17.13 Summary	544
Chapter 18 Using XML in Stored Procedures, UDFs, and Triggers	547
18.1 Manipulating XML in SQL Stored Procedures	548
18.1.1 Basic XML Manipulation in Stored Procedures	548
18.1.2 A Stored Procedure to Store XML in a Hybrid Manner	550
18.1.3 Loops and Cursors	553
18.1.4 A Stored Procedure to Update a Selected XML Element or Attribute	554
18.1.5 Three Tips for Testing Stored Procedures	555

18.2 Manipulating XML in User-Defined Functions	556
18.2.1 A UDF to Extract an Element or Attribute Value	557
18.2.2 A UDF to Extract the Values of a Repeating Element	557
18.2.3 A UDF to Shred XML Data to a Relational Table	558
18.2.4 A UDF to Modify an XML Document	559
18.3 Manipulating XML Data with Triggers	561
18.3.1 Insert Triggers on Tables with XML Columns	562
18.3.2 Delete Triggers on Tables with XML Columns	563
18.3.3 Update Triggers on XML Columns	564
18.4 Summary	564
Chapter 19 Performing Full-Text Search	567
19.1 Overview of Text Search in DB2	568
19.2 Sample Table and Data	570
19.3 Enabling a Database for the DB2 Net Search Extender	571
19.4 Managing Full-Text Indexes with the DB2 Net Search Extender	572
19.4.1 Creating Basic Text Indexes	572
19.4.2 Creating Text Indexes with Specific Storage Paths	573
19.4.3 Creating Text Indexes with a Periodic Update Schedule	574
19.4.4 Creating Text Indexes for Specific Parts of Each Document	576
19.4.5 Creating Text Indexes with Advanced Options	578
19.4.6 Updating and Reorganizing Text Indexes	579
19.4.7 Altering Text Indexes	580
19.5 Performing XML Full-Text Search with the DB2 Net Search Extender	581
19.5.1 Full-Text Search in SQL and XQuery	581
19.5.2 Full-Text Search with Boolean Operators	583
19.5.3 Full-Text Search with Custom Document Models	585
19.5.4 Advanced Search with Proximity, Fuzzy, and Stemming Options	586
19.5.5 Finding the Correct Match within an XML Document	587
19.5.6 Search Conditions on Sibling Branches of an XML Document	588
19.5.7 Text Search in the Presence of Namespaces	588
19.6 DB2 Text Search	590
19.6.1 Enabling a Database for DB2 Text Search	590
19.6.2 Creating and Maintaining Full-Text Indexes for DB2 Text Search	591
19.6.3 Writing DB2 Text Search Queries for XML Data	592
19.6.4 Full-Text Search with XPath Expressions	593
19.6.5 Full-Text Search with Wildcards	594
19.7 Summary of Text Search Administration Commands	594
19.8 XML Full-Text Search in DB2 for z/OS	596
19.9 Summary	596

Chapter 20 Understanding XML Data Encoding	597
20.1 Understanding Internal and External XML Encoding	599
20.1.1 Internally Encoded XML Data	599
20.1.2 Externally Encoded XML Data	600
20.2 Avoiding Code Page Conversions	601
20.3 Using Non-Unicode Databases for XML	601
20.4 Examples of Code Page Issues	602
20.4.1 Example 1: Chinese Characters in a Non-Unicode Code Page ISO-8859-1	602
20.4.2 Example 2: Fetching Data from a Non-Unicode Code Database into a Character-Type Application Variable	603
20.4.3 Example 3: Encoding Issues with XMLTABLE and XMLCAST	604
20.4.4 Example 4: Japanese Literal Values in a Non-Unicode Database	605
20.4.5 Example 5: Data Expansion and Shrinkage Due to Code Page Conversion	605
20.5 Avoiding Data Loss and Encoding Errors in Non-Unicode Databases	606
20.6 Summary	606
Chapter 21 Developing XML Applications with DB2	609
21.1 The Value of DB2 pureXML for Application Development	610
21.1.1 Avoid XML Parsing in the Application Layer	610
21.1.2 Storing Business Objects in an Intuitive Format	612
21.1.3 Rapid Prototyping	612
21.1.4 Responding Quickly to Changing Business Needs	613
21.2 Using Parameter Markers or Host Variables	613
21.3 Java Applications	615
21.3.1 XML Support in JDBC 3.0	615
21.3.2 XML Support in JDBC 4.0	619
21.3.3 Comprehensive Example of Manipulating XML Data with JDBC 4.0	621
21.3.4 Creating XML Documents from Application Data	627
21.3.5 Binding XML Data to Java Objects	629
21.3.6 IBM pureQuery	629
21.4 .NET Applications	631
21.4.1 Querying XML Data in .NET Applications	632
21.4.2 Manipulating XML Data in .NET Applications	633
21.4.3 Inserting XML Data from .NET Applications	635
21.4.4 XML Schema and DTD Handling in .NET Applications	636
21.5 CLI Applications	636
21.6 Embedded SQL Applications	639
21.6.1 COBOL Applications with Embedded SQL	640
21.6.2 PL/I Applications with Embedded SQL	643
21.6.3 C Applications with Embedded SQL	645
21.7 PHP Applications	647

21.8	Perl Applications	650
21.9	XML Application Development Tools	651
21.9.1	IBM Data Studio Developer	652
21.9.2	IBM Database Add-ins for Visual Studio	656
21.9.3	Altova XML Tools	656
21.9.4	<oXygen/>	658
21.9.5	Stylus Studio	659
21.10	Summary	659
Chapter 22	Exploring XML Information in the DB2 Catalog	661
22.1	XML-Related Catalog Information in DB2 for Linux, UNIX, and Windows	661
22.1.1	Catalog Information for XML Columns	661
22.1.2	The XML Strings and Paths Tables	662
22.1.3	The Internal XML Regions and Path Indexes	663
22.1.4	Catalog Information for User-Defined XML Indexes	664
22.1.5	Catalog Information for XML Schemas	667
22.2	XML-Related Catalog Information in DB2 for z/OS	667
22.2.1	Catalog Information for XML Storage Objects	667
22.2.2	Catalog Information for XML Indexes	671
22.2.3	Catalog Information for XML Schemas	672
22.3	Summary	673
Chapter 23	Test Your Knowledge—The DB2 pureXML Quiz	675
23.1	Designing XML Data and Applications	675
23.2	Designing and Managing Storage Objects for XML	677
23.3	Inserting and Retrieving XML Data	680
23.4	Moving XML Data	681
23.5	Querying XML	682
23.6	Producing XML from Relational Data	686
23.7	Converting XML to Relational Data	687
23.8	Updating and Transforming XML Documents	688
23.9	Defining and Using XML Indexes	689
23.10	XML Performance and Monitoring	692
23.11	Managing XML Data with Namespaces	693
23.12	XML Schemas and Validation	694
23.13	Performing Full-Text Search	696
23.14	XML Application Development	697
23.15	Answers	700
Appendix A	Getting Started with DB2 pureXML	703
A.1	Exploring the Structure of XML Documents	703
A.1.1	Exploring XML Documents in the DB2 Control Center	703
A.1.2	Exploring XML Documents in the CLP	704
A.1.3	Exploring XML Documents in SPUFI	705
A.2	Tips for Running XML Operations in the CLP	706

Appendix B The XML Sample Database	709
B.1 XML Sample Database on DB2 for Linux, UNIX, and Windows	709
B.2 XML Sample Tables on DB2 for z/OS	710
B.3 Table customer—Column info	710
B.4 Table product—Column description	712
B.5 Table purchaseorder—Column porder	713
Appendix C Further Reading	717
C.1 General Resources for All Chapters	717
C.2 Chapter-Specific Resources	718
C.3 Resources on the Integration of DB2 pureXML with Other Products	726
Index	727
